Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 7.84%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.34%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 14.99%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.34%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 16.11% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This fund followed a multi-asset strategy as the principal investment strategy. At least 60% of the net assets were invested in equities. Up to 40% of the net assets were invested in interest-bearing securities; this did not include convertible debentures and warrant-linked bonds. Up to 40% of the fund's assets were invested in money market instruments. Up to 25% of the fund's assets were invested in bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or

corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded..

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to

the UN Global Compact;

- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Emerging Markets Top Dividend

**Legal entity identifier:** 5493004IT6HNQG6YQG05

**ISIN:** LU0329760002

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>  |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 11.4%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 2.2 % of assets   |
| Climate and Transition Risk Assessment B    |             | 2.94 % of assets  |
| Climate and Transition Risk Assessment C    |             | 68.85 % of assets |
| Climate and Transition Risk Assessment D    |             | 21.63 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 19.1 % of assets  |
| ESG Quality Assessment B                    |             | 29.22 % of assets |
| ESG Quality Assessment C                    |             | 33.56 % of assets |
| ESG Quality Assessment D                    |             | 13.75 % of assets |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 33.86 % of assets |
| Norm Assessment B                           |             | 21.6 % of assets  |
| Norm Assessment C                           |             | 28.94 % of assets |
| Norm Assessment D                           |             | 11.23 % of assets |
| Norm Assessment E                           |             | 0 % of assets     |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 0 % of assets     |
| Sovereign Freedom Assessment B              |             | 0 % of assets     |
| Sovereign Freedom Assessment C              |             | 0 % of assets     |
| Sovereign Freedom Assessment D              |             | 0 % of assets     |
| Sovereign Freedom Assessment E              |             | 0 % of assets     |
| Sovereign Freedom Assessment F              |             | 0 % of assets     |
| <b>Involvement in controversial sectors</b> |             |                   |
| Adult entertainment C                       |             | 0 % of assets     |
| Adult entertainment D                       |             | 0 % of assets     |
| Adult entertainment E                       |             | 0 % of assets     |
| Adult entertainment F                       |             | 0 % of assets     |
| Civil firearms C                            |             | 0 % of assets     |
| Civil firearms D                            |             | 0 % of assets     |
| Civil firearms E                            |             | 0 % of assets     |
| Civil firearms F                            |             | 0 % of assets     |
| Coal C                                      |             | 0 % of assets     |
| Coal D                                      |             | 0 % of assets     |
| Coal E                                      |             | 0 % of assets     |
| Coal F                                      |             | 0 % of assets     |
| Gambling C                                  |             | 0 % of assets     |
| Gambling D                                  |             | 5.22 % of assets  |
| Gambling E                                  |             | 0 % of assets     |
| Gambling F                                  |             | 0 % of assets     |
| Military Defense C                          |             | 0 % of assets     |
| Military Defense D                          |             | 0 % of assets     |
| Military Defense E                          |             | 0 % of assets     |
| Military Defense F                          |             | 0 % of assets     |
| Nuclear power C                             |             | 0 % of assets     |
| Nuclear power D                             |             | 0 % of assets     |
| Nuclear power E                             |             | 0 % of assets     |
| Nuclear power F                             |             | 0 % of assets     |

| Nuclear weapons F                           |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?".

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Emerging Markets Top Dividend

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 42478.27 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 261.51 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 622.02 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 7.04 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons.) | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

| ICICI Bank ADR                         | K - Financial and insurance activities                                   | 1.9 %                            | India                |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97.65% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 95.63%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 97.65% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 11.4% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The share of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 6.83% and the proportion of socially sustainable investments was 4.57%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

2.35% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Emerging Markets Top Dividend

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>7.0 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |

| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted minimum share of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.83%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.69%.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 4.57%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.69%.

What investments were included under “#2 Other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 2.35% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have been used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund did acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds, warrants, dividend-right certificates, index certificates, and financial instruments certificated in securities of well-established issuers based in Emerging Markets. At least 70% (after deduction of liquid assets) of the sub-fund's assets were invested in equities of companies registered in Emerging Markets countries or in companies that conduct their principal business activity in Emerging Markets countries or which, as holding companies, hold primarily interest in companies registered in Emerging Markets countries, that can be expected to deliver an above-average dividend yield. Up to 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### Freedom House status

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

### Exposure to controversial sectors

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### DWS exclusions for controversial weapons

Companies were excluded if identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### DWS Use of Proceeds Bond Assessment

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period? ”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 26.34%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Equity Income

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| ESG Quality Assessment A                    | -           | 57,73 % of assets |
| ESG Quality Assessment B                    | -           | 12,61 % of assets |

| Cluster munitions F                         | -           | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

**DWS ESG-Assessment Scale**

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Equity Income

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 607149.18 tCO2e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 233.39 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 562.61 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 22.12 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Equity Income

| Largest investments                    | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|--|---|----------------------------------|----------------------|
| Merck & Co.                            | C - Manufacturing                                       | 2.6 %                            | United States        |

| AXA                                    | K - Financial and insurance activities                  | 1.7 %                            | France               |
| HSBC Holdings                          | K - Financial and insurance activities                  | 1.6 %                            | United Kingdom       |
| PepsiCo                                | C - Manufacturing                                       | 1.6 %                            | United States        |
| Eversource Energy                      | D - Electricity, gas, steam and air conditioning supply | 1.6 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 92.90% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 90.21%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 92.90% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 26.34% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable).

The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 6.98% and the proportion of socially sustainable investments was 19.36%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

7.1% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Equity Income

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 5.1 %                    |
| C   | Manufacturing  | 32.8 %                   |
| D   | Electricity, gas, steam and air conditioning supply                  | 2.5 %                    |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 1.4 %                    |
| H   | Transporting and storage   | 4.1 %                    |

| K   | Financial and insurance activities                                   | 15.1 %                   |
| M   | Professional, scientific and technical activities                    | 18.6 %                   |
| Q   | Human health and social work activities                              | 1.8 %                    |
| NA  | Other  | 7.3 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>22.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.98%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 24.23%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 19.36%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 24.23%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 7.1% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets were invested in equities from international issuers that were expected to deliver an above-average dividend yield. Up to 30% of the sub-fund's assets were invested in money market instruments and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector.

Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

#### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded..

#### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

- The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken

into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

#### **Reference**

**benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 15.97%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

How did the sustainability indicators perform?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Euro Bonds (Short)

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 4.92 % of assets  |
| Climate and Transition Risk Assessment B    |             | 5.87 % of assets  |
| Climate and Transition Risk Assessment C    |             | 55.69 % of assets |
| Climate and Transition Risk Assessment D    |             | 32.39 % of assets |
| Climate and Transition Risk Assessment E    |             | 0.64 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 34.14 % of assets |
| ESG Quality Assessment B                    |             | 16.35 % of assets |
| ESG Quality Assessment C                    |             | 38.03 % of assets |
| ESG Quality Assessment D                    |             | 9.02 % of assets  |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 20.27 % of assets |
| Norm Assessment B                           |             | 7.33 % of assets  |
| Norm Assessment C                           |             | 17.16 % of assets |
| Norm Assessment D                           |             | 9.72 % of assets  |
| Norm Assessment E                           |             | 0 % of assets     |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 9.87 % of assets  |
| Sovereign Freedom Assessment B              |             | 29.31 % of assets |
| Sovereign Freedom Assessment C              |             | 1.77 % of assets  |
| Sovereign Freedom Assessment D              |             | 1.54 % of assets  |
| Sovereign Freedom Assessment E              |             | 0 % of assets     |
| Sovereign Freedom Assessment F              |             | 0 % of assets     |
| <b>Involvement in controversial sectors</b> |             |                   |
| Adult entertainment C                       |             | 0.36 % of assets  |
| Adult entertainment D                       |             | 0 % of assets     |
| Adult entertainment E                       |             | 0 % of assets     |
| Adult entertainment F                       |             | 0 % of assets     |
| Civil firearms C                            |             | 0 % of assets     |
| Civil firearms D                            |             | 0 % of assets     |
| Civil firearms E                            |             | 0 % of assets     |
| Civil firearms F                            |             | 0 % of assets     |
| Coal C                                      |             | 1.19 % of assets  |
| Coal D                                      |             | 0 % of assets     |
| Coal E                                      |             | 0 % of assets     |
| Coal F                                      |             | 0 % of assets     |
| Gambling C                                  |             | 0.94 % of assets  |
| Gambling D                                  |             | 0 % of assets     |
| Gambling E                                  |             | 0 % of assets     |
| Gambling F                                  |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

The aforementioned principal adverse impacts were considered at product level by applying the DWS ESG assessment methodology or exclusions to the assets of the sub-fund that met the promoted environmental and social characteristics as detailed in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Euro Bonds (Short)

| Indicators   | Description   | Performance                |
|--|---|----------------------------|
| <b>Principal Adverse Impact</b>  |   |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                               | 109456.52 tCO2e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 302.14 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 853.22 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 11.5 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 91.91% of portfolio assets.

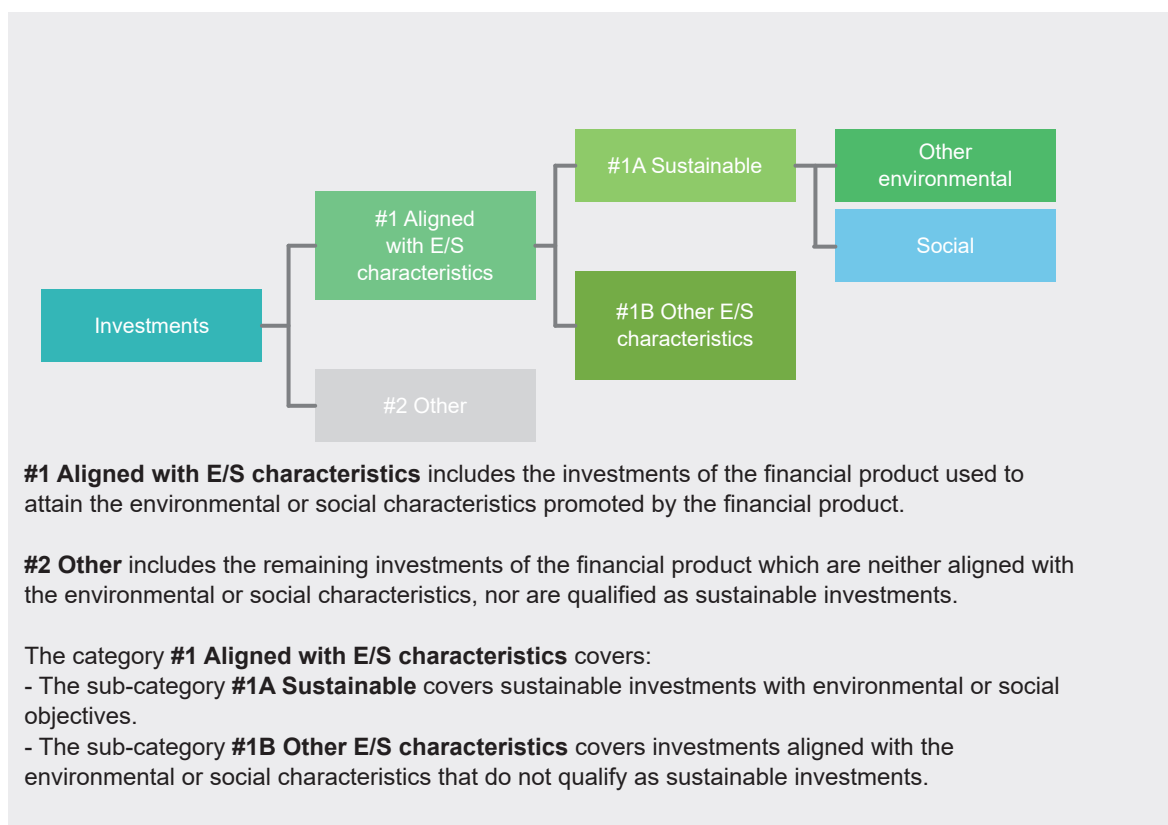

Proportion of sustainability-related investments for the previous year: 99.5%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 91.91% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 15.97% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 12.59% and the proportion of socially sustainable investments was 3.38%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

8.09% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

#### In which economic sectors were the investments made?

#### DWS Invest ESG Euro Bonds (Short)

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 2.6 %                    |

| O   | Public administration and defence; compulsory social security        | 41.8 %                   |
| NA  | Other  | 4.9 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>11.5 %</b>            |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 12.59%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 14.22%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 3.38%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 14.22%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 8.09% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund acquired interest-bearing securities, convertible bonds, and warrant-linked bonds, participation and dividend-right certificates, equities, and equity warrants. At least 70% of the sub-fund's assets were invested in interest-bearing securities denominated in Euros. At least 70% of the sub-fund's assets were traded on exchanges or on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operated regularly and was recognized and open to the public. Furthermore, at least 70% of the sub-fund's assets had securities with maturities ranging between zero and three years. No more than 25% of the sub-fund's assets were invested in convertible bonds and warrant-linked bonds, and no more than 10% were invested in participation and dividend-right certificates, equities, and equity warrants.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

• **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

#### • DWS Target Fund Assessment

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### • Non-ESG assessed asset classes

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Euro Corporate Bonds

**Legal entity identifier:** 549300N28JWBUL3R7I24

**ISIN:** LU2001241897

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 23.53%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Euro Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 9.84 % of assets  |
| Climate and Transition Risk Assessment B    |             | 8.91 % of assets  |
| Climate and Transition Risk Assessment C    |             | 66.09 % of assets |
| Climate and Transition Risk Assessment D    |             | 10.65 % of assets |
| Climate and Transition Risk Assessment E    |             | 3.06 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 47.34 % of assets |
| ESG Quality Assessment B                    |             | 23.21 % of assets |

| Cluster munitions D                         |             | 0 % of assets     |

| Indicators                 | Description | Performance   |
|----------------------------|-------------|---------------|
| Cluster munitions E        |             | 0 % of assets |
| Cluster munitions F        |             | 0 % of assets |
| Depleted uranium weapons D |             | 0 % of assets |
| Depleted uranium weapons E |             | 0 % of assets |
| Depleted uranium weapons F |             | 0 % of assets |
| Nuclear weapons D          |             | 0 % of assets |
| Nuclear weapons E          |             | 0 % of assets |
| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |

| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 37281.83 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 271.48 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 650.74 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 15.09 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Euro Corporate Bonds

| Largest investments                             | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 90.21% of portfolio assets.

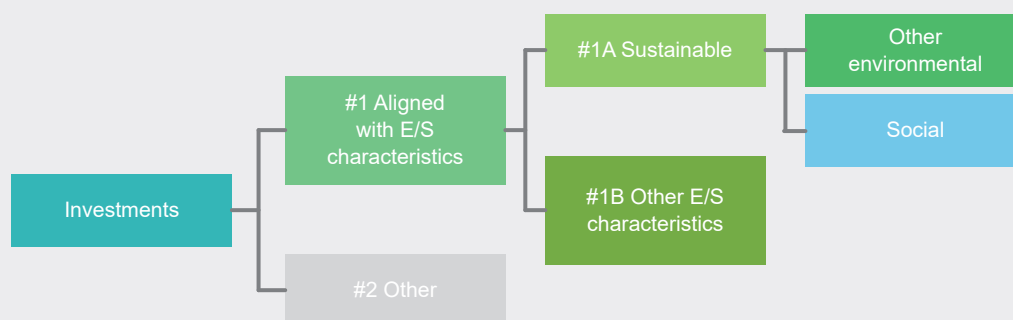

Proportion of sustainability-related investments for the previous year: 99.35%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 90.21% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 23.53% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 16.48% and the proportion of socially sustainable investments was 7.05%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

9.79% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Euro Corporate Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 8.6 %                    |
| D   | Electricity, gas, steam and air conditioning supply                  | 1.7 %                    |
| F   | Construction   | 0.4 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>15.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 16.48%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 26.29%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 7.05%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 26.29%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 9.79% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund acquired euro-denominated fixed and/or variable interest-bearing securities, convertible bonds, and warrant-linked bonds, participation and dividend-right certificates, equities, and equity warrants. At least 70% of the sub-fund's assets were invested in corporate bonds denominated in Euros that offered returns higher than those of comparable government bonds; investments were deliberately focused almost exclusively on issuers whose credit standing was considered by the market to be relatively good but not first-rate (investment-grade bonds). No more than 25% of the sub-fund's assets were invested in convertible bonds and warrant-linked bonds; no more than 10% were invested in participation and dividend-right certificates, equities, and equity warrants. The sub-fund's investments in asset-backed securities and mortgage-backed securities were limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### • **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

#### • **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

#### • **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

#### • **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### • **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Euro High Yield

**Legal entity identifier:** 2549003PZE015L3POO62

**ISIN:** LU2111935651

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 19.71% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 19.71%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Euro High Yield

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 4.63 % of assets  |
| Climate and Transition Risk Assessment B    |             | 3.35 % of assets  |
| Climate and Transition Risk Assessment C    |             | 52.79 % of assets |
| Climate and Transition Risk Assessment D    |             | 32.02 % of assets |
| Climate and Transition Risk Assessment E    |             | 1.72 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Euro High Yield

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 106039.12 tCO <sub>2</sub> e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 600.17 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 777.16 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 13.36 % of assets                       |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 82.17% of portfolio assets.

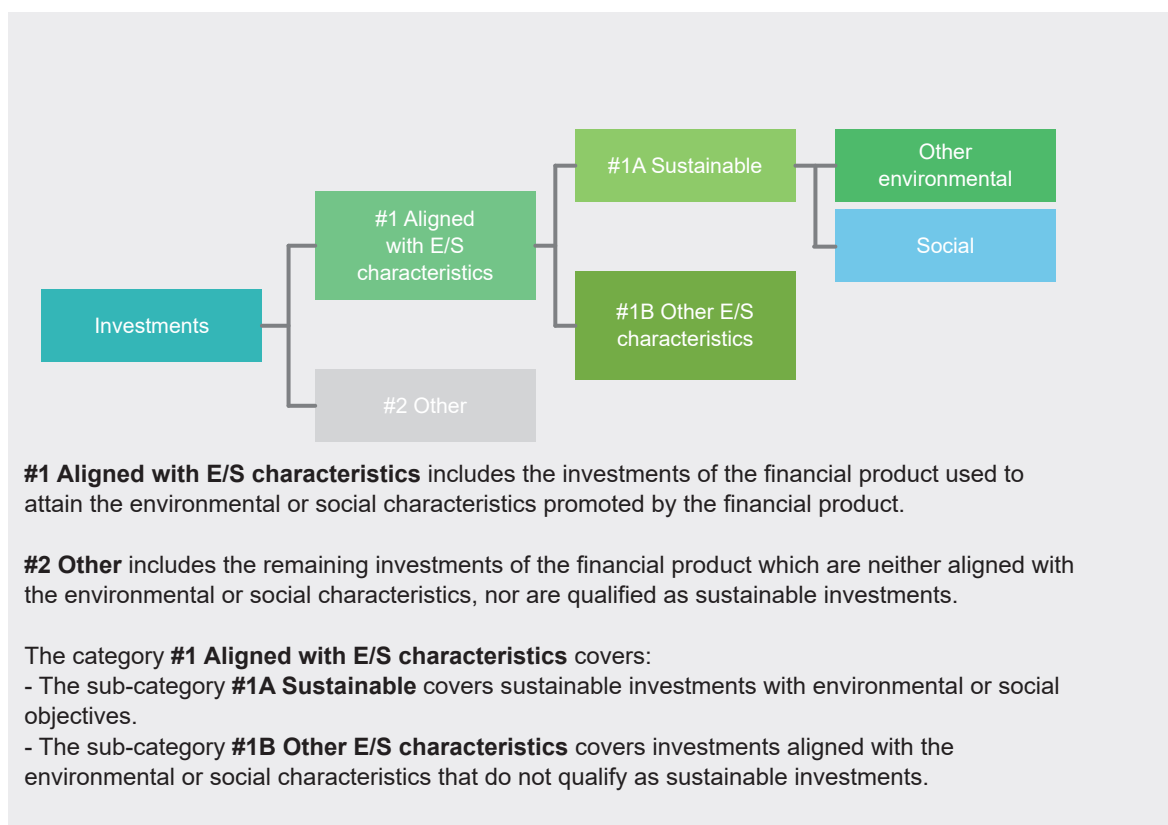

Proportion of sustainability-related investments for the previous year: 98.23%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 82.17% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 19.71% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 13.41% and the proportion of socially sustainable investments was 6.3%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

17.83% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

#### In which economic sectors were the investments made?

#### DWS Invest ESG Euro High Yield

| NACE-Code | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>13.4 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 13.41%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 18.32%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 6.3%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 18.32%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 17.83% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 70% of the sub-fund's assets were invested globally in corporate bonds (including Financials) that offered a non-investment grade status at the time of acquisition. In the due course of a re-structuring of fixed income instruments held by the sub-fund, the sub-fund manager did also invest up to a maximum of 10% of the sub-fund's assets in listed or non-listed equities. Furthermore, the sub-fund manager did also participate in capital increases or other corporate actions (e.g., for convertible bonds or warrant-linked bonds) that were part of a re-structuring or took place after a re-structuring. The sub-fund's investments in contingent convertibles were limited to 10% of the sub-fund's net asset value. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect of the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group was composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison received a better score, while issuers rated worse in the comparison received a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of “E” or “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluated a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) were excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment were limited to 25% of the sub-fund's net assets.

#### • **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors were defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, nuclear energy or coal mining and coal-based power generation.

Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) were excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) were excluded as an investment.

#### • **Involvement in controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons. Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generated from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) were excluded as an investment.

#### • **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that an investment could be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG European Small/Mid Cap

**Legal entity identifier:** 549300I4MADW6ZHX8U51

**ISIN:** LU1863262371

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

To what extent were the environmental and/or social characteristics promoted by this financial product met?

#### **Sustainability**

**indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights and labor rights, customer and environmental safety, and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst two scores in terms of environmental, social, and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics, as well as sustainable investment, was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that are used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as an indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as an indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as an indicator for the comparison of an issuer’s environmental, social, and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as an indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** were used as an indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as an indicator to measure the proportion of sustainable investments.  
Performance: 22.13%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG European Small/Mid Cap

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 2.46 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 3.41 % of assets  |
| Climate and Transition Risk Assessment C    | -           | 68.88 % of assets |
| Climate and Transition Risk Assessment D    | -           | 20.77 % of assets |
| Climate and Transition Risk Assessment E    | -           | 0.43 % of assets  |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 51.97 % of assets |

| Nuclear weapons E                           | -           | 0 % of assets |
| Nuclear weapons F                           | -           | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contribute to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets regarding whether an investment could be considered sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment, and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources, and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment was sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx), and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualify as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualify as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments. The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

**How did this financial product consider principal adverse impacts on sustainability factors?**

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**DWS Invest ESG European Small/Mid Cap**

| Indicators   | Description   | Performance                |
|--|---|----------------------------|
| <b>Principal Adverse Impact</b>  |   |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                               | 132549.32 tCO2e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 430.57 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 578.1 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 11.24 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG European Small/Mid Cap

| Largest investments                      | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.03% of portfolio assets.

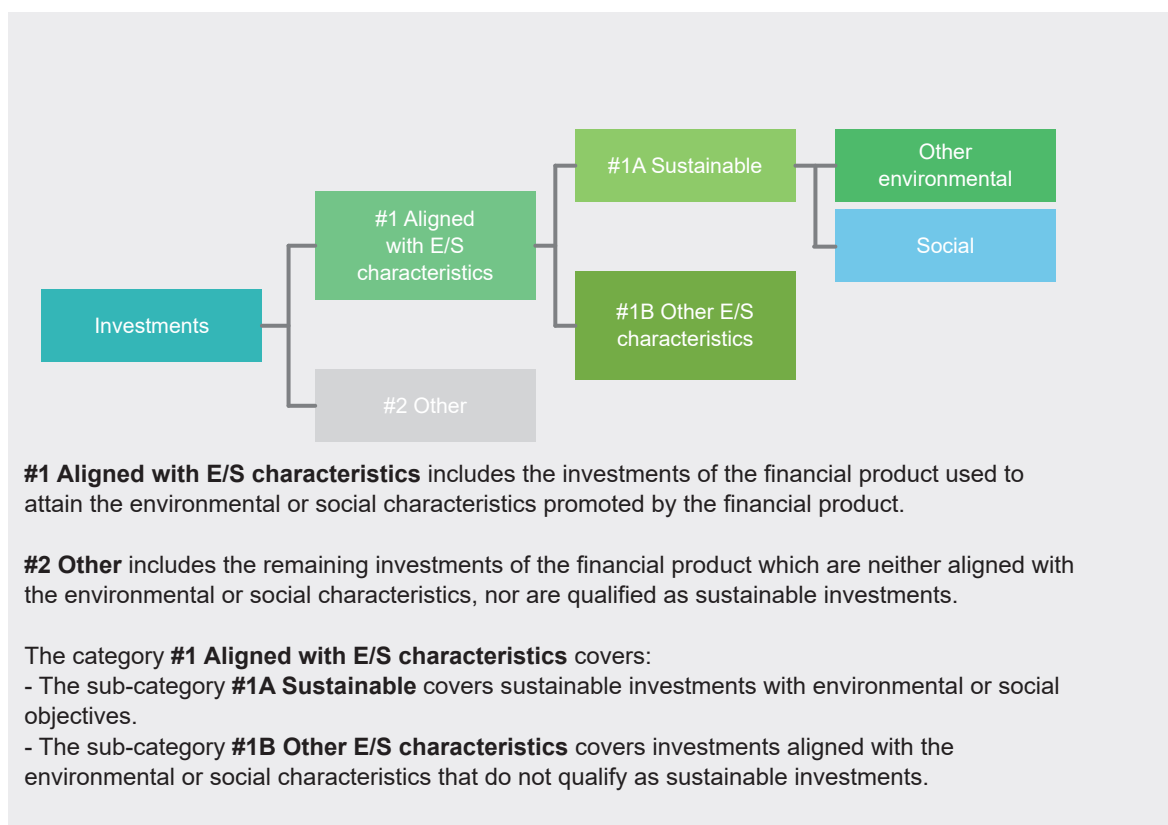

Proportion of sustainability-related investments for the previous year: 98.14%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 94.03% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 22.13% of the net assets of the sub-funds qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 13.19% and the proportion of socially sustainable investments was 8.94%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

5.97% of the net assets of the ###FundType## were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

## In which economic sectors were the investments made?

### DWS Invest ESG European Small/Mid Cap

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| A   | Agriculture, forestry and fishing                                    | 1.1 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | 11.2 %                   |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

#### Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

#### Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 13.19%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.55%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 8.94%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.55%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.97% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 80% of the sub-fund's assets were invested in equities. At least 51% of the sub-fund's assets were invested in equities of medium and small European issuers (mid caps and small caps).

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect of the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset was in general eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## DWS ESG Quality Assessment

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up of the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest two scores compared to their peer group (i.e., a letter score of "E" or "F") were excluded as an investment. Further, companies with a letter score of "D" were limited to 15% of the sub-fund's net assets.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest two scores in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "E" or "F") were excluded as an investment. Further, government issuers with a letter score of "D" were limited to 15% of the sub-fund's net assets.

## Freedom House status

Freedom House is an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

## Exposure to controversial sectors

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing and/or distribution of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, arctic drilling): more than 0%
- Coal mining: more than 0%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology. The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

## DWS Exclusions for Energy Companies

To achieve the goals of the Paris Agreement, energy companies play a central role. Therefore, additional criteria applied for companies involved in oil and gas and for certain utilities as described below.

-Companies were excluded from the portfolio if their share of total revenues generated in oil and gas (exploration, extraction, refining, and transportation of oil and gas, or providing dedicated equipment or services therefore) exceeded 5%. Companies with more than 5% revenue share remained investable if they fulfill one of the following requirements:

- Science-based target (SBT) of 1.5°C or well-below 2°C; or
- Capital expenditure (CapEx) in renewable energies of more than 15% of total CapEx.

-Furthermore, additional criteria applied to certain utilities, namely those classified according to the Global Industry Classification Standard (GICS) as electric utilities (55101010), gas utilities (55102010), multi-utilities (55103010), and independent power producers

In a first step, these companies must demonstrate that they did not structurally expanding power generation from coal and nuclear energy. This was verified either by a current revenue share of 0% from power generation from coal and nuclear energy or by the fact that the companies did not make any capital expenditures (CapEx) in these sectors.

In a second step, at least one of the following transition criteria was met:

- Science-based target (SBT) of 1.5°C or well-below 2°C; or
- Capital expenditure (CapEx) in renewable energies of more than 50% of total CapEx; or
- More than 50% revenue from activities attributable to the UN SDGs no. 7 (affordable and clean energy) or no. 13 (climate action); or
- Maximum greenhouse gas emission intensity of 354g CO<sub>2</sub>e/kWh in 2023, 335g CO<sub>2</sub>e/kWh in 2024 and 315g CO<sub>2</sub>e/kWh in 2025. This rule will no longer apply from 2026

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions, incendiary bombs as well as smoke bombs based on white phosphorus. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 0%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Floating Rate Notes

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 2.96 % of assets  |
| Climate and Transition Risk Assessment C    |             | 80.45 % of assets |
| Climate and Transition Risk Assessment D    |             | 13.94 % of assets |
| Climate and Transition Risk Assessment E    |             | 0.07 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Floating Rate Notes

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 69637.44 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 212.13 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 659.56 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 3.37 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Floating Rate Notes

| Largest investments                     | Breakdown by sector according to NACE Codes | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 90.1% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 97.42%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 90.1% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 7.34% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 2.86% and the proportion of socially sustainable investments was 4.48%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

9.9% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Floating Rate Notes

| NACE-Code   | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing   | 1.2 %                    |
| I   | Accommodation and food service activities                     | 0.1 %                    |
| J   | Information and communication                                 | 1.9 %                    |
| K   | Financial and insurance activities                            | 78.5 %                   |

| NA  | Other   | 11.6 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>3.4 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 2.86%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 6.66%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 4.48%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 6.66%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 9.9% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 70% of the sub-fund's assets were invested in floating rate bonds. Furthermore, the sub-fund's assets were invested in convertible bonds or fixed rate bonds that were traded on exchanges or on another regulated market that was recognized, open to the public, and operated regularly and that was located in a member country of the Organisation for Economic Co-operation and Development (OECD), in the G20, the EU, Singapore, as well as in investment funds (including money market funds), deposits with credit, and money market instruments. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus. The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example,

concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

• **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);

- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period? ”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 21.57%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Global Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 5.75 % of assets  |
| Climate and Transition Risk Assessment B    |             | 10.44 % of assets |
| Climate and Transition Risk Assessment C    |             | 69 % of assets    |
| Climate and Transition Risk Assessment D    |             | 12.2 % of assets  |
| Climate and Transition Risk Assessment E    |             | 1.24 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 47.49 % of assets |
| ESG Quality Assessment B                    |             | 22.08 % of assets |
| ESG Quality Assessment C                    |             | 22.17 % of assets |
| ESG Quality Assessment D                    |             | 5.51 % of assets  |

| Nuclear weapons D          |             | 0 % of assets |
| Nuclear weapons E          |             | 0 % of assets |
| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Global Corporate Bonds

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 41139.58 tCO <sub>2</sub> e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 216.81 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 715.98 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 10.56 % of assets                       |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)               | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Global Corporate Bonds

| Largest investments                         | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

| Cigna Group 18/15.12.48 S.WI                | K - Financial and insurance activities                | 0.6 %                            | United States        |
| UnitedHealth Group 21/15.05.51              | M - Professional, scientific and technical activities | 0.6 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 95.08% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.02%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 95.08% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 21.57% of the net assets of the sub-fund's qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 11.78% and the proportion of socially sustainable investments was 9.79%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

4.92% of the net assets of the sub-fund's were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the ####FundType## were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Global Corporate Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 0.6 %                    |
| C   | Manufacturing  | 10.0 %                   |
| D   | Electricity, gas, steam and air conditioning supply                  | 3.5 %                    |
| F   | Construction   | 0.2 %                    |

| Q   | Human health and social work activities                              | 0.7 %                    |
| NA  | Other  | 8.8 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>10.6 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 11.78%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.12%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 9.79%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.12%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.09% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 80% of the sub-fund's assets were invested globally in interest-bearing debt securities denominated in euro or hedged against the euro that had an investment grade status at the time of acquisition. Up to 20% of the sub-fund's assets were invested in interest-bearing debt securities denominated in euro or hedged against the euro that did not meet the above-mentioned criteria, as well as money market instruments and cash. The sub-fund's investments in covered bonds were limited to 40% of the sub-fund's net asset value, and asset-backed securities were limited to 20% of the sub-fund's net asset value. At least 50% of the sub-fund's assets were invested globally in corporate bonds. The sub-fund's investments in contingent convertibles were limited to 10% of the sub-fund's net asset value. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

## **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded..

## **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

## **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

## **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Global Emerging Markets Equities

**Legal entity identifier:** 549300OD0ROCLWJDQR95

**ISIN:** LU1984220373

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 11,75%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Global Emerging Markets Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 5.74 % of assets  |
| Climate and Transition Risk Assessment C    |             | 59.45 % of assets |
| Climate and Transition Risk Assessment D    |             | 27.36 % of assets |
| Climate and Transition Risk Assessment E    |             | 3.66 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 28.48 % of assets |
| ESG Quality Assessment B                    |             | 20.8 % of assets  |
| ESG Quality Assessment C                    |             | 33.48 % of assets |
| ESG Quality Assessment D                    |             | 13.36 % of assets |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 24.41 % of assets |
| Norm Assessment B                           |             | 20.74 % of assets |
| Norm Assessment C                           |             | 22.08 % of assets |
| Norm Assessment D                           |             | 25.2 % of assets  |
| Norm Assessment E                           |             | 3.68 % of assets  |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 0 % of assets     |
| Sovereign Freedom Assessment B              |             | 0 % of assets     |
| Sovereign Freedom Assessment C              |             | 0 % of assets     |
| Sovereign Freedom Assessment D              |             | 0 % of assets     |
| Sovereign Freedom Assessment E              |             | 0 % of assets     |
| Sovereign Freedom Assessment F              |             | 0 % of assets     |
| <b>Involvement in controversial sectors</b> |             |                   |
| Adult entertainment C                       |             | 0 % of assets     |
| Adult entertainment D                       |             | 0 % of assets     |
| Adult entertainment E                       |             | 0 % of assets     |
| Adult entertainment F                       |             | 0 % of assets     |
| Civil firearms C                            |             | 0 % of assets     |
| Civil firearms D                            |             | 0 % of assets     |
| Civil firearms E                            |             | 0 % of assets     |
| Civil firearms F                            |             | 0 % of assets     |
| Coal C                                      |             | 2.87 % of assets  |
| Coal D                                      |             | 0 % of assets     |
| Coal E                                      |             | 0 % of assets     |
| Coal F                                      |             | 0 % of assets     |
| Gambling C                                  |             | 6.69 % of assets  |
| Gambling D                                  |             | 0 % of assets     |
| Gambling E                                  |             | 0 % of assets     |
| Gambling F                                  |             | 0 % of assets     |
| Military Defense C                          |             | 4.62 % of assets  |
| Military Defense D                          |             | 0 % of assets     |
| Military Defense E                          |             | 0 % of assets     |
| Military Defense F                          |             | 0 % of assets     |
| Nuclear power C                             |             | 2.78 % of assets  |
| Nuclear power D                             |             | 0 % of assets     |
| Nuclear power E                             |             | 0 % of assets     |
| Nuclear power F                             |             | 0 % of assets     |
| Oil sands C                                 |             | 0 % of assets     |
| Oil sands D                                 |             | 0 % of assets     |
| Oil sands E                                 |             | 0 % of assets     |
| Oil sands F                                 |             | 0 % of assets     |
| Tobacco C                                   |             | 0 % of assets     |
| Tobacco D                                   |             | 0 % of assets     |
| Tobacco E                                   |             | 0 % of assets     |
| Tobacco F                                   |             | 0 % of assets     |
| <b>Involvement in controversial weapons</b> |             |                   |
| Anti-personnel mines D                      |             | 0 % of assets     |
| Anti-personnel mines E                      |             | 0 % of assets     |
| Anti-personnel mines F                      |             | 0 % of assets     |
| Cluster munitions D                         |             | 0 % of assets     |
| Cluster munitions E                         |             | 0 % of assets     |
| Cluster munitions F                         |             | 0 % of assets     |
| Depleted uranium weapons D                  |             | 0 % of assets     |
| Depleted uranium weapons E                  |             | 0 % of assets     |
| Depleted uranium weapons F                  |             | 0 % of assets     |
| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Global Emerging Markets Equities

| Indicators   | Description  | Performance                             |
|--|--|---|
| <b>Principal Adverse Impact</b>  |  |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.  | 149231.21 tCO <sub>2</sub> e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC) | 239.08 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 528.99 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector   | 3.39 % of assets                        |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Global Emerging Markets Equities

| Largest investments       | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|---------------------------|--|----------------------------------|----------------------|
| Taiwan Semiconductor ADR  | C - Manufacturing  | 6.9 %                            | Taiwan               |

| Firstrand                 | M - Professional, scientific and technical activities                    | 1.9 %                            | South Africa         |
| Alibaba Group Holding ADR | M - Professional, scientific and technical activities                    | 1.9 %                            | China                |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 96.52% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 96.21%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 96.52% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 11.75% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable).

The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 8.28% and the proportion of socially sustainable investments was 3.47%.

The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

3.48% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Global Emerging Markets Equities

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 28.8 %                   |
| E   | Water supply; sewerage; waste management and remediation activities  | 2.1 %                    |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 12.9 %                   |
| H   | Transporting and storage   | 1.2 %                    |

| NA  | Other  | 7.5 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>3.4 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.28%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 6.33%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 3.47%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 6.33%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 3.48% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets were invested in equities of companies registered in Emerging Markets countries or companies that conducted their principal business activity in Emerging Markets countries or which, as holding companies, held primarily interest in companies registered in Emerging Markets countries. The securities issued by these companies could be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operated regularly and were recognized and open to the public. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus. The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on

cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

#### • **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

#### • **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

#### • **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### • **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### • **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality

Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets may have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Healthy Living

**Legal entity identifier:** 254900DIR686E6QI4T43

**ISIN:** LU2379121283

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective:</b> ____%                   | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 45.59% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ____%                           | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 45.59%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Healthy Living

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 16.93 % of assets |
| Climate and Transition Risk Assessment C    |             | 61.02 % of assets |
| Climate and Transition Risk Assessment D    |             | 16.28 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 47.77 % of assets |
| ESG Quality Assessment B                    |             | 13.44 % of assets |
| ESG Quality Assessment C                    |             | 22.41 % of assets |
| ESG Quality Assessment D                    |             | 10.61 % of assets |

| Depleted uranium weapons E |             | 0 % of assets |
| Depleted uranium weapons F |             | 0 % of assets |
| Nuclear weapons D          |             | 0 % of assets |
| Nuclear weapons E          |             | 0 % of assets |
| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 1212.52 tCO <sub>2</sub> e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 203.06 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 632.94 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 6.36 % of assets                        |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Healthy Living

| Largest investments     | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|-------------------------|---|----------------------------------|----------------------|
| UnitedHealth Group      | M - Professional, scientific and technical activities | 7.1 %                            | United States        |

| Mowi                    | A - Agriculture, forestry and fishing                 | 2.9 %                            | Norway               |
| Eli Lilly and Company   | C - Manufacturing                                     | 2.9 %                            | United States        |
| Novonosis               | C - Manufacturing                                     | 2.8 %                            | Denmark              |
| Intertek Group          | M - Professional, scientific and technical activities | 2.8 %                            | United Kingdom       |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 93.7% of portfolio assets.

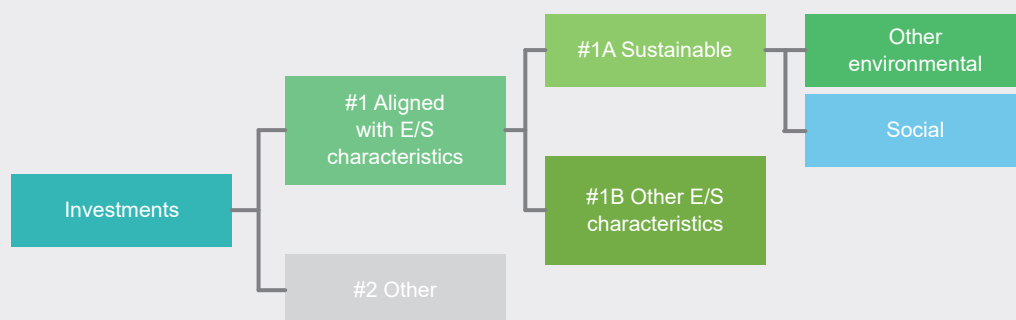

Proportion of sustainability-related investments for the previous year: 94.23%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 93.7% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 45.59% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 5.39% and the proportion of socially sustainable investments was 40.2%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

6.3% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Healthy Living

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>6.4 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 5.39%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 41%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 40.2%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 41%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 6.3% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursues a strategy based on equities as main investment strategy. At least 80% of net assets are invested in equity securities of companies in the health care and consumer health sectors. At least 70% of the sub-fund's assets are invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds and equity warrants issued by international companies. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets are predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics is integral part of the DWS ESG assessment methodology, which is continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aims to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology is based on the DWS ESG database, which uses data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments take into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derives coded scores within different assessment approaches as further detailed below. Individual assessment approaches are based on a letter scale from "A" to "F". Each issuer receives one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provides separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach is deemed insufficient, the sub-fund is prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches. The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices.

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, receive better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

• **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded..

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
  
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

- **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

- **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

- **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

- **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Mobility

**Legal entity identifier:** 254900YCVDPCPK4IYF04

**ISIN:** LU2463037890

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>  |
|--|---|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 17.02 % of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy   |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy   |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted <b>E/S characteristics, but did not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights and labor rights, customer and environmental safety, and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of socially sustainable investments with positive contribution to one or several of the United Nations Sustainable Development Goals (UNSDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 17.02%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Mobility

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 15.97 % of assets |
| Climate and Transition Risk Assessment C    |             | 21.5 % of assets  |
| Climate and Transition Risk Assessment D    |             | 59.69 % of assets |
| Climate and Transition Risk Assessment E    |             | 1.72 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 39.21 % of assets |

| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violations of lesser degree                         | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund will partially invest in sustainable investments according to article 2(17) SFDR. Such sustainable investments will contribute to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of contribution to individual UN SDGs will vary based on the actual investments in the portfolio.

DWS was determining the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were being used to assess the potential assets with regard to whether an economic activity could be considered as socially sustainable. As part of this assessment methodology, it was being determined whether (1) an economic activity made a positive contribution to one or more UN SDGs, (2) this economic activity or other economic activities of the company significantly harmed these goals ("Do Not Significantly Harm" - DNSH assessment) and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources, and/or internal assessments based on a defined assessment and classification methodology to determine whether an economic activity was socially sustainable. Activities that made a positive contribution to the UN SDGs were being assessed based on revenues, capital expenditure (CapEx), and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the economic activity was deemed socially sustainable if the DNSH assessment of the company was passed and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualify as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualify as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund was currently not committing to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

## DWS Invest ESG Mobility

| Indicators   | Description   | Performance                 |
|--|---|-----------------------------|
| <b>Principal Adverse Impact</b>  |   |                             |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                               | 4239.98 tCO2e               |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 599.09 tCO2e / million EUR  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 1074.73 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 12.84 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets               |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets               |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Mobility

| Largest investments        | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|----------------------------|---|----------------------------------|----------------------|
| NVIDIA Corp.               | C - Manufacturing                                     | 3.0 %                            | United States        |
| Booking Holdings           | N - Information and communication                     | 3.0 %                            | United States        |

| Tesla                      | C - Manufacturing                                     | 1.9 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 96.19% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.86%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 96.19% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 17.02% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). The actual share of sustainable investments with an environmental objective that were not compliant with the EU Taxonomy was 17.02%.

3.81% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Mobility

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 48.8 %                   |
| D   | Electricity, gas, steam and air conditioning supply                  | 0.4 %                    |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 1.0 %                    |
| H   | Transporting and storage   | 7.6 %                    |
| J   | Information and communication  | 11.7 %                   |
| K   | Financial and insurance activities                                   | 2.9 %                    |
| M   | Professional, scientific and technical activities                    | 14.1 %                   |
| NA  | Other  | 13.6 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>12.8 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 17.02%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 15.82%.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 15.82%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 3.81% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in shares, stock certificates and warrant-linked bonds whose underlying warrants were for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the theme "mobility".

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on

cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

#### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above nevertheless permitted an investment in bonds of excluded issuers if the particular requirements for use-of-proceeds bonds were met. In this case, the bond were first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not met these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### **DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Multi Asset Defensive

**Legal entity identifier:** 549300EYR1MMK08S1P71

**ISIN:** LU1935133790

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS Sustainability Investment Assessment** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Asian Small/Mid Cap

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 8.99 % of assets  |
| Climate and Transition Risk Assessment B    |             | 5.81 % of assets  |
| Climate and Transition Risk Assessment C    |             | 52.54 % of assets |
| Climate and Transition Risk Assessment D    |             | 24.94 % of assets |
| Climate and Transition Risk Assessment E    |             | 0.6 % of assets   |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 55.75 % of assets |
| ESG Quality Assessment B                    |             | 16.7 % of assets  |
| ESG Quality Assessment C                    |             | 21.88 % of assets |

| Nuclear weapons F                           |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emission to water (no. 8);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Multi Asset Defensive

| Indicators   | Description  | Performance           |
|--|--|-----------------------|
| <b>Principal Adverse Impact</b>  |  |                       |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)   | 0 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 0 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector   | 0 % of assets         |
| PAII - 08. Emission to Water   | Wastewater discharged into surface waters (in tons) as a result of industrial or Production activities.  | 0 tons                |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets         |
| PAII - 14. Exposure to controversial weapons   |  | 0 % of assets         |

As of: November 23, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Multi Asset Defensive

| Largest investments                             | Breakdown by sector according to NACE Codes          | in % of average portfolio volume | Breakdown by country |

for the timespan January 1, 2023 until November 20, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through November 23, 2023

Due to the liquidation of the sub-fund on November 21, 2023, the reporting of the sectors was based on November 20, 2023, as no portfolio transactions took place between November 20, 2023 and the liquidation date.

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 93.74%

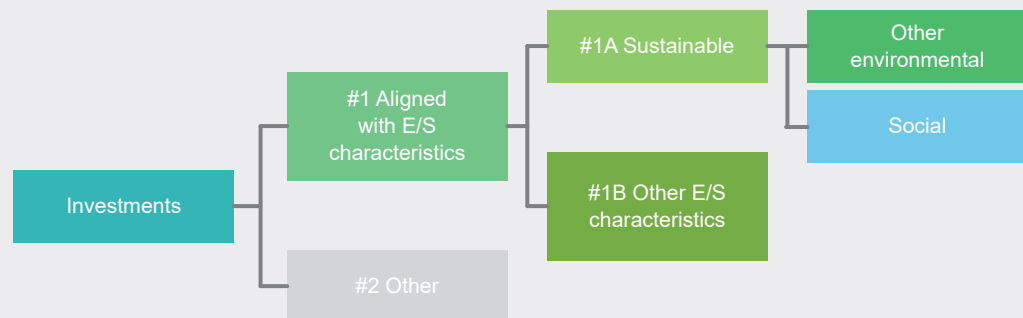

## Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund was merged into DWS Invest ESG Multi Asset Income on November 21, 2023. As of the merger-date, the sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 0% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 0% and the proportion of socially sustainable investments was 0%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

As of the merger-date 100% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Multi Asset Defensive

| NACE-Code   | Breakdown of the industry structure according to the NACE system | % of assets |
|---|--|-------------|
| B   | Mining   | 0,3 %       |
| C   | Manufacturing industry   | 5,8 %       |
| D   | Power supply   | 1,1 %       |
| F   | Construction   | 0,3 %       |
| G   | Trade, repair of vehicles  | 0,5 %       |
| H   | Storage  | 0,2 %       |
| J   | Information and Communication                                    | 4,0 %       |

| O   | Healthcare   | 24,9 %      |
| Q   | Art and Entertainment  | 0,7 %       |
| R   | Art and Entertainment  | 0,2 %       |
| NA  | Various  | 5,7 %       |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>0 %</b>  |

As of November 20, 2023

Due to the dissolution of the sub-fund on November 21, 2023, the reporting of the sectors was based on November 20, 2023, as no portfolio transactions took place between November 20, 2023 and the dissolution date.

Further information can be found in the asset overview in the annual report

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.8%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.8%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. Up to 100% of the sub-fund might be invested in interest-bearing securities, in certificates on, for example bonds, indices, in convertible bonds, in warrant-linked bonds whose underlying warrants related to securities, in participation and dividend-right certificates, in derivatives as well as in money market instruments, deposits and cash. Up to 35% of the sub-fund's assets were invested in equities, equity funds, certificates on equities or equity indices and equity warrants. The sub-fund's investments in asset-backed securities and mortgage backed securities should be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### **Exposure to controversial sectors**

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involved the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affected the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, nuclear energy or coal mining and coal-based power generation.

Issuers were evaluated according to the share of total revenues they generated in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of "D", "E" or "F") were excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of "E" or "F") were excluded as an investment.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that complied with DWS' Use-of-proceeds bond assessment were investable also in cases where the bond issuer did not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds was assessed via a two-stage process.

In the first stage DWS assessed whether a bond qualified as a Use of Proceeds Bond. A key element was checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focused on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complied with these principles, the second stage assessed the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment was based on the ESG assessment methodology as described above and excluded:

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of "E" or "F"),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of "E" or "F"),
- issuers with highest severity of norm issues (i.e. a letter score "F"), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of "D", "E" or "F")

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practices by means of an investment in target funds, the latter did meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlying complied with the DWS ESG assessment methodology.

Ancillary liquid assets were not evaluated via the ESG assessment methodology.

#### **Sustainability investment assessment methodology**

Further, for the proportion of sustainable investments DWS did measure the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity was to be considered as sustainable.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective: ___%</b>                    | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 35.67% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective: ___%</b>                            | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of:

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 35.67%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Multi Asset Income

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 24.3 % of assets  |
| Climate and Transition Risk Assessment B    |             | 12.61 % of assets |
| Climate and Transition Risk Assessment C    |             | 48.66 % of assets |
| Climate and Transition Risk Assessment D    |             | 9.11 % of assets  |
| Climate and Transition Risk Assessment E    |             | 0.98 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 62.41 % of assets |
| ESG Quality Assessment B                    |             | 14.29 % of assets |
| ESG Quality Assessment C                    |             | 13.78 % of assets |
| ESG Quality Assessment D                    |             | 5.44% of assets   |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 19.69 % of assets |
| Norm Assessment B                           |             | 13.88 % of assets |
| Norm Assessment C                           |             | 37.63 % of assets |
| Norm Assessment D                           |             | 18.44 % of assets |
| Norm Assessment E                           |             | 0.12 % of assets  |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 9.31 % of assets  |
| Sovereign Freedom Assessment B              |             | 1.68 % of assets  |
| Sovereign Freedom Assessment C              |             | 0.28 % of assets  |
| Sovereign Freedom Assessment D              |             | 3.72 % of assets  |
| Sovereign Freedom Assessment E              |             | 0 % of assets     |
| Sovereign Freedom Assessment F              |             | 0 % of assets     |
| <b>Involvement in controversial sectors</b> |             |                   |
| Adult entertainment C                       |             | 0 % of assets     |

| Oil sands D                                 |             | 0 % of assets     |
| Oil sands E                                 |             | 0 % of assets     |
| Oil sands F                                 |             | 0 % of assets     |
| Tobacco C                                   |             | 0 % of assets     |
| Tobacco D                                   |             | 0 % of assets     |
| Tobacco E                                   |             | 0 % of assets     |
| Tobacco F                                   |             | 0 % of assets     |
| <b>Involvement in controversial weapons</b> |             |                   |
| Anti-personnel mines D                      |             | 0 % of assets     |
| Anti-personnel mines E                      |             | 0 % of assets     |
| Anti-personnel mines F                      |             | 0 % of assets     |
| Cluster munitions D                         |             | 0 % of assets     |

| Indicators                 | Description | Performance   |
|----------------------------|-------------|---------------|
| Cluster munitions E        |             | 0 % of assets |
| Cluster munitions F        |             | 0 % of assets |
| Depleted uranium weapons D |             | 0 % of assets |
| Depleted uranium weapons E |             | 0 % of assets |
| Depleted uranium weapons F |             | 0 % of assets |
| Nuclear weapons D          |             | 0 % of assets |
| Nuclear weapons E          |             | 0 % of assets |
| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

| Indicators   | Description   | Performance                |
|--|---|----------------------------|
| <b>Principal Adverse Impact</b>  |   |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.                                  | 27331.38 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 247.95 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 541.76 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 18.31 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

| Société Générale                                | K - Financial and insurance activities                            | 1.0 %                            | France               |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.24% of portfolio assets.

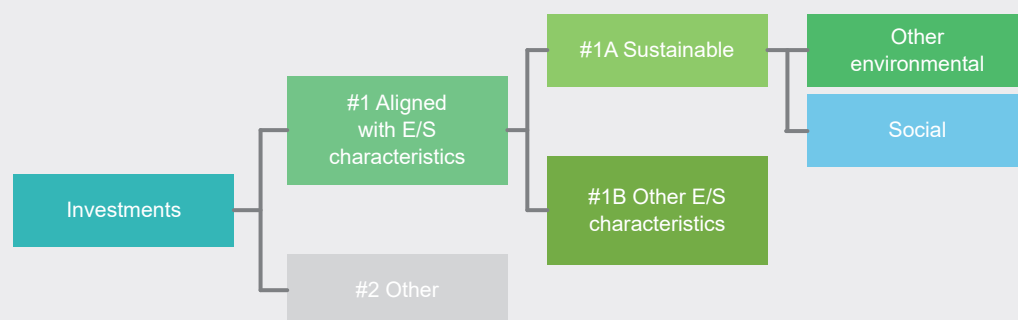

Proportion of sustainability-related investments for the previous year: 95.92%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 94.24% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 35.67% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 26.16% and the proportion of socially sustainable investments was 9.51%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

5.76% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Multi Asset Income

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| A   | Agriculture, forestry and fishing                                    | 0.2 %                    |
| B   | Mining and quarrying   | 2.1 %                    |

| Q   | Human health and social work activities                              | 0.9 %                    |
| NA  | Other  | 8.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>18.3 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 26.16%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 38.96%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 9.51%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 38.96%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.76% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. The sub-fund invested up to 75% of the sub-fund's assets in interest-bearing securities, convertible bonds, bond funds, certificates on bonds or bond indices and warrant-linked bonds. Up to 65% of the sub-fund's assets were invested in equities, equity funds, certificates on equities or equity indices and equity warrants. The sub-fund's investments in asset-backed securities and mortgage backed securities should be limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);

- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 39.13%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Next Generation Infrastructure

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 9.7 % of assets   |
| Climate and Transition Risk Assessment B    | -           | 17.8 % of assets  |
| Climate and Transition Risk Assessment C    | -           | 40.96 % of assets |
| Climate and Transition Risk Assessment D    | -           | 25.86 % of assets |
| Climate and Transition Risk Assessment E    | -           | 4.75 % of assets  |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 47.73 % of assets |
| ESG Quality Assessment B                    | -           | 33.78 % of assets |
| ESG Quality Assessment C                    | -           | 13.72 % of assets |
| ESG Quality Assessment D                    | -           | 2.86 % of assets  |
| ESG Quality Assessment E                    | -           | 0 % of assets     |
| ESG Quality Assessment F                    | -           | 0 % of assets     |
| Norm Assessment A                           | -           | 53.11 % of assets |
| Norm Assessment B                           | -           | 20.32 % of assets |
| Norm Assessment C                           | -           | 17.72 % of assets |
| Norm Assessment D                           | -           | 6.95 % of assets  |
| Norm Assessment E                           | -           | 0 % of assets     |
| Norm Assessment F                           | -           | 0 % of assets     |

| Nuclear weapons E          | -           | 0 % of assets |
| Nuclear weapons F          | -           | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

### DWS Invest ESG Next Generation Infrastructure

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 55539.11 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 188.03 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 741.42 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 49.86 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Next Generation Infrastructure

| Largest investments            | Breakdown by sector according to NACE Codes                             | in % of average portfolio volume | Breakdown by country |
|--------------------------------|---|----------------------------------|----------------------|
| Cellnex Telecom                | J - Information and communication                                       | 4.9 %                            | Spain                |
| SSE                            | D - Electricity, gas, steam and air conditioning supply                 | 4.3 %                            | United Kingdom       |
| American Tower                 | J - Information and communication                                       | 4.2 %                            | United States        |
| Exelon Corp.                   | D - Electricity, gas, steam and air conditioning supply                 | 3.8 %                            | United States        |
| Orsted                         | D - Electricity, gas, steam and air conditioning supply                 | 3.8 %                            | Denmark              |
| National Grid                  | M - Professional, scientific and technical activities                   | 3.7 %                            | United Kingdom       |
| Hydro One                      | D - Electricity, gas, steam and air conditioning supply                 | 3.4 %                            | Canada               |
| American Water Works Co.       | E - Water supply; sewerage; waste management and remediation activities | 3.0 %                            | United States        |
| Terna Rete Elettrica Nazionale | D - Electricity, gas, steam and air conditioning supply                 | 3.0 %                            | Italy                |
| Crown Castle Inc.              | C - Manufacturing   | 2.9 %                            | United States        |

| Edison International           | D - Electricity, gas, steam and air conditioning supply                 | 2.8 %                            | United States        |
| E.ON Reg.                      | M - Professional, scientific and technical activities                   | 2.7 %                            | Germany              |
| Brookfield Renewable Cl.A      | D - Electricity, gas, steam and air conditioning supply                 | 2.4 %                            | Canada               |
| Equinix REIT                   | J - Information and communication                                       | 2.4 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97.11% of portfolio assets.

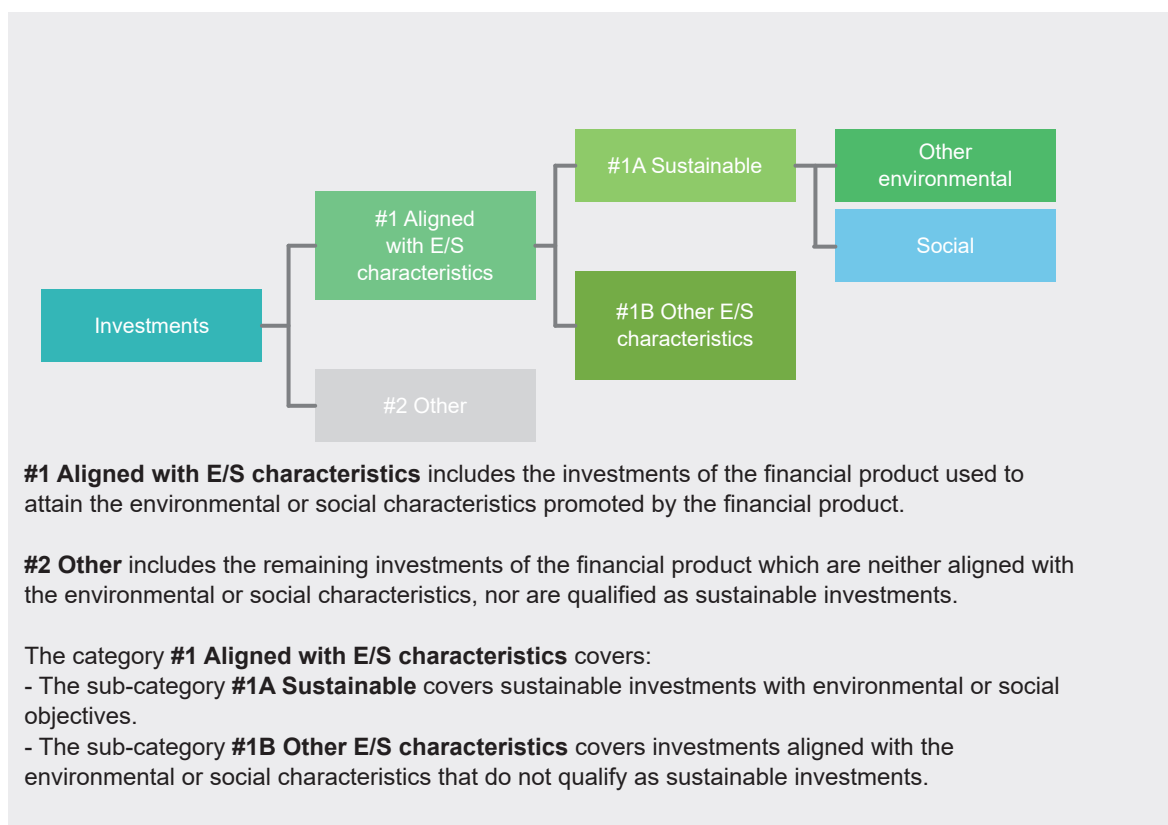

Proportion of sustainability-related investments for the previous year: 99.5%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 97.11% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 39.13% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 36.57% and the proportion of socially sustainable investments was 2.56%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

2.89% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

#### In which economic sectors were the investments made?

#### DWS Invest ESG Next Generation Infrastructure

| NACE-Code   | Breakdown by sector according to NACE Codes                         | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing   | 4.6 %                    |
| D   | Electricity, gas, steam and air conditioning supply                 | 35.0 %                   |
| E   | Water supply; sewerage; waste management and remediation activities | 4.6 %                    |
| H   | Transporting and storage  | 1.4 %                    |
| J   | Information and communication                                       | 16.6 %                   |
| L   | Real estate activities  | 9.8 %                    |
| M   | Professional, scientific and technical activities                   | 21.1 %                   |
| N   | Administrative and support service activities                       | 1.9 %                    |
| NA  | Other   | 5.0 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>49.9 %</b>            |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 36.57%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 31.42%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 2.56%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 31.42%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 2.89% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund primarily in the equities of listed companies that own, developed or managed real estate, provided that these equities were considered to be transferable securities as defined by Article 41 (1) of the Law of 2010, as well as in equities and other instruments of issuers of the “Global Infrastructure” sector. The sub-fund might acquired equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants were for securities, equity warrants and participation certificates. In addition, the sub-fund’s assets might be invested in index certificates on recognized equity indices. At least 70% of the sub-fund’s total assets were invested in: equities of real estate companies, real estate investment companies including closed ended real estate investment trusts (REITs) of any legal form, securities similar to equities, such as participation and dividend-right certificates, derivative financial instruments like equity indices, and other equity securities and uncertificated equity instruments of issuers of the “Global Infrastructure” sector.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund’s assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund’s strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund’s investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of “F”) were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) were excluded as an investment.

### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG NextGen Consumer

**Legal entity identifier:** 254900W6KZ5CEGOVP716

**ISIN:** LU2400048364

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 15.86%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG NextGen Consumer

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 15.1 % of assets  |
| Climate and Transition Risk Assessment C    |             | 64.84 % of assets |
| Climate and Transition Risk Assessment D    |             | 17.23 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 35.15 % of assets |
| ESG Quality Assessment B                    |             | 20.34 % of assets |
| ESG Quality Assessment C                    |             | 29.28 % of assets |
| ESG Quality Assessment D                    |             | 11.43 % of assets |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 18.96 % of assets |
| Norm Assessment B                           |             | 13.77 % of assets |
| Norm Assessment C                           |             | 30.09 % of assets |
| Norm Assessment D                           |             | 29.58 % of assets |
| Norm Assessment E                           |             | 3.79 % of assets  |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 0 % of assets     |
| Sovereign Freedom Assessment B              |             | 0 % of assets     |
| Sovereign Freedom Assessment C              |             | 0 % of assets     |

| Nuclear weapons E          |             | 0 % of assets |
| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violations of lesser degree                         | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 615.22 tCO <sub>2</sub> e               |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 130.6 tCO <sub>2</sub> e / million EUR  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 430.27 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 1.33 % of assets                        |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG NextGen Consumer

| Largest investments                     | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|---|--|----------------------------------|----------------------|
| Microsoft Corp.                         | J - Information and communication  | 4.1 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.37% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 97.16%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 94.37% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 15.86% of the net assets of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 8.74% and the proportion of socially sustainable investments was 7.12%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

5.63% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG NextGen Consumer

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| A   | Agriculture, forestry and fishing                                    | 1.5 %                    |
| C   | Manufacturing  | 32.3 %                   |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 12.0 %                   |
| I   | Accommodation and food service activities                            | 2.1 %                    |

| M   | Professional, scientific and technical activities                    | 14.8 %                   |
| NA  | Other  | 6.5 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>1.3 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.74%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 14.7%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 7.12%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 14.7%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.63% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's total assets were invested in equities of companies, which benefit from a shift in consumption patterns was driven by millennials and subsequent (next) generations. The sub-fund focused on affected sectors like food, luxury, consumer goods, financials & financial services, IT, communication services, mobility, energy, healthcare, education.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on

cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;

- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Qi LowVol World

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 25.74%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Qi LowVol World

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 10.59 % of assets |
| Climate and Transition Risk Assessment C    |             | 59.2 % of assets  |
| Climate and Transition Risk Assessment D    |             | 26.5 % of assets  |
| Climate and Transition Risk Assessment E    |             | 2.95 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |

| Nuclear weapons F          |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Qi LowVol World

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 30235.65 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 197.27 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 455.17 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 13.25 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Qi LowVol World

| Largest investments                  | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|--------------------------------------|---|----------------------------------|----------------------|
| Merck & Co.                          | C - Manufacturing                                       | 2.1 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.  
Proportion of sustainability-related investments for the previous year: 99.24%

**Asset allocation**

describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 25.74% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 4.62% and the proportion of socially sustainable investments was 21.12%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

0% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Qi LowVol World

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 2.6 %                    |

| NA  | Other  | 0.3 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>13.2 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.62%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 26.11%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 21.12%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 26.11%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. In the portfolio construction the sub-fund management was focusing on constructing an equity portfolio that was expected to have lower volatility in comparison to the broad equity market. "Qi" related to the stock selection, which was based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. At least 60% of the sub-fund's assets were invested globally in equities. Up to 40% of the assets of the sub-fund might be invested in money market instruments, term deposits and cash respectively.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded..

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### **DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 0%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Qi US Equity

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0.4 % of assets   |
| Climate and Transition Risk Assessment B    |             | 17.74 % of assets |
| Climate and Transition Risk Assessment C    |             | 52.23 % of assets |
| Climate and Transition Risk Assessment D    |             | 17.84 % of assets |
| Climate and Transition Risk Assessment E    |             | 3.93 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 41.12 % of assets |
| ESG Quality Assessment B                    |             | 19.28 % of assets |
| ESG Quality Assessment C                    |             | 23.53 % of assets |
| ESG Quality Assessment D                    |             | 8.21 % of assets  |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |
| Norm Assessment A                           |             | 17.80 % of assets |
| Norm Assessment B                           |             | 16.36 % of assets |
| Norm Assessment C                           |             | 19.45 % of assets |
| Norm Assessment D                           |             | 34.86 % of assets |
| Norm Assessment E                           |             | 3.66 % of assets  |
| Norm Assessment F                           |             | 0 % of assets     |
| Sovereign Freedom Assessment A              |             | 0 % of assets     |
| Sovereign Freedom Assessment B              |             | 0 % of assets     |
| Sovereign Freedom Assessment C              |             | 0 % of assets     |
| Sovereign Freedom Assessment D              |             | 0 % of assets     |
| Sovereign Freedom Assessment E              |             | 0 % of assets     |
| Sovereign Freedom Assessment F              |             | 0 % of assets     |
| <b>Involvement in controversial sectors</b> |             |                   |
| Adult Entertainment C                       |             | 0 % of assets     |
| Adult Entertainment D                       |             | 0 % of assets     |

| Tobacco E                                   |             | 0 % of assets     |
| Tobacco F                                   |             | 0 % of assets     |

| Indicators                                  | Description | Performance   |
|---|-------------|---------------|
| <b>Involvement in controversial weapons</b> |             |               |
| Anti-personnel mines D                      |             | 0 % of assets |
| Anti-personnel mines E                      |             | 0 % of assets |
| Anti-personnel mines F                      |             | 0 % of assets |
| Cluster munitions D                         |             | 0 % of assets |
| Cluster munitions E                         |             | 0 % of assets |
| Cluster munitions F                         |             | 0 % of assets |
| Depleted uranium weapons D                  |             | 0 % of assets |
| Depleted uranium weapons E                  |             | 0 % of assets |
| Depleted uranium weapons F                  |             | 0 % of assets |
| Nuclear weapons D                           |             | 0 % of assets |
| Nuclear weapons E                           |             | 0 % of assets |
| Nuclear weapons F                           |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

**DWS ESG-Assessment Scale**

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Qi US Equity

| Indicators   | Description   | Performance           |
|--|---|-----------------------|
| <b>Principal Adverse Impact</b>  |   |                       |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions                                | 0 tCO2e               |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 0 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 0 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets         |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets         |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets         |

As of: December 21, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Qi US Equity

| Largest investments                            | Breakdown by sector according to NACE Codes                      | in % of average portfolio volume | Breakdown by country |
|--|--|----------------------------------|----------------------|
| Apple  | G - Manufacturing and distribution of goods                      | 6,0 %                            | United States        |
| Microsoft Corp.                                | J - Computing und Communication                                  | 4,8 %                            | United States        |
| NVIDIA Corp.                                   | C - Manufacturing industry                                       | 2,2 %                            | United States        |
| DWS Deutsche GLS - Managed Dollar Fund Z-Class | K - Provision of financial and insurance services                | 1,7 %                            | Ireland              |

for the timespan from January 1, 2023 until December 21, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 21, 2023

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 92.14%

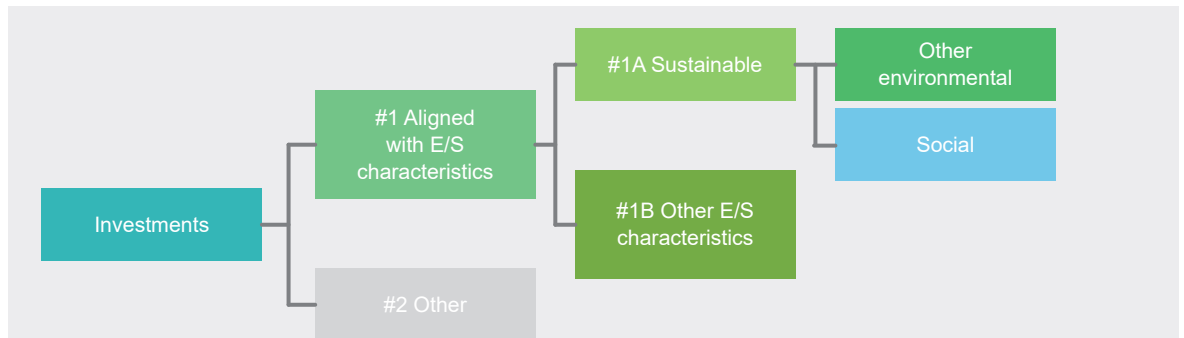

**Asset allocation** describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund was liquidated on December 21, 2023 and invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 0% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable).

The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 0% and the proportion of socially sustainable investments was 0%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

100% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest ESG Qi US Equity

Breakdown of the industry structure % of assets

Bank balance 100 %

**Exposure to companies active in the fossil fuel sector** 0 %

As of December 21, 2023

This sub-fund was liquidated on December 21, 2023, the reporting of the sectors was based on December 21, 2023, as no portfolio transactions took place between December 21, 2023 and the dissolution date.

Further information can be found in the asset overview in the annual report

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 0%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.15%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 0%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.15%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund would acquire only such assets that in combination could be expected to generate income and/or growth or were expected to improve the risk profile of the overall portfolio. "Qi" related to the stock selection, which was based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group. At least 75% of the sub-fund's assets were invested in U.S. equities. Up to 25% of the assets of the sub-fund might be invested in money market instruments, term deposits and cash respectively.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded..

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS Exclusions for Controversial Weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition

Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG Assessed Asset Classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Real Assets

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of:

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 23.04%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Real Assets

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 1.7 % of assets   |
| Climate and Transition Risk Assessment B    |             | 10.44 % of assets |
| Climate and Transition Risk Assessment C    |             | 28.84 % of assets |
| Climate and Transition Risk Assessment D    |             | 48.03 % of assets |
| Climate and Transition Risk Assessment E    |             | 3.88 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 33.54 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Real Assets

| Indicators   | Description  | Performance                             |
|--|--|---|
| <b>Principal Adverse Impact</b>  |  |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.  | 42299.61 tCO <sub>2</sub> e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC) | 400.33 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 936.38 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector   | 31.99 % of assets                       |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Real Assets

| Largest investments                   | Breakdown by sector according to NACE Codes                             | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 91.88% of portfolio assets.

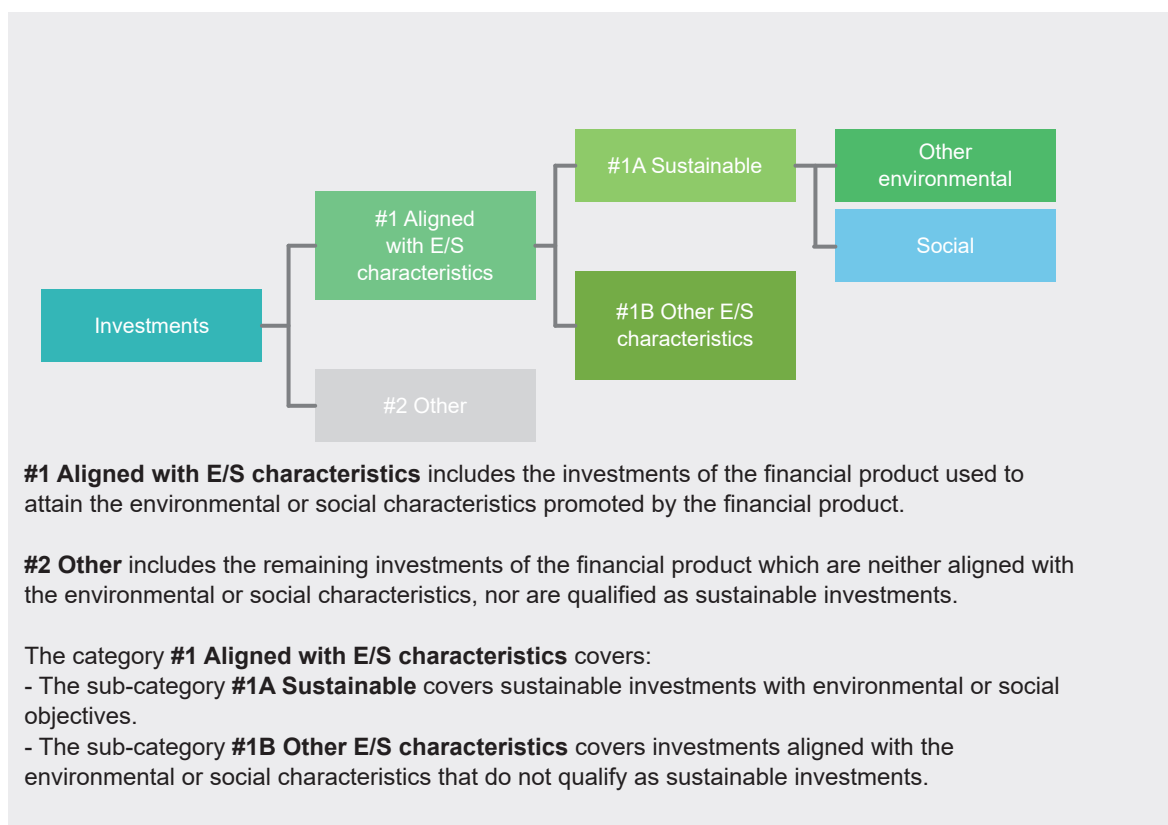

Proportion of sustainability-related investments for the previous year: 92.91%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 91.88% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 23.04% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 19.79% and the proportion of socially sustainable investments was 3.25%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

8.12% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

#### In which economic sectors were the investments made?

#### DWS Invest ESG Real Assets

| NACE-Code | Breakdown by sector according to NACE Codes                         | in % of portfolio volume |
|-----------|---|--------------------------|
| A         | Agriculture, forestry and fishing                                   | 1.1 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>32.0 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 19.79%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.64%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 3.25%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.64%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 8.12% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as its main investment strategy. The sub-fund could acquire equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants were for securities, equity warrants and participation certificates, government-issued fixed-income securities, exchange-traded funds, and units of other investment undertakings. At least 70% of the sub-fund's assets were invested in publicly traded real assets. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or

corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

• **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to

the UN Global Compact;

- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### • **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### • **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Smart Industrial Technologies

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of environmentally sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 16.9%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Smart Industrial Technologies

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 0.75 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 10.95 % of assets |
| Climate and Transition Risk Assessment C    | -           | 30.65 % of assets |
| Climate and Transition Risk Assessment D    | -           | 46.83 % of assets |
| Climate and Transition Risk Assessment E    | -           | 2.08 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment can be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

## DWS Invest ESG Smart Industrial Technologies

| Indicators   | Description   | Performance                              |
|--|---|--|
| <b>Principal Adverse Impact</b>  |   |  |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 21720.35 tCO <sub>2</sub> e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 560.47 tCO <sub>2</sub> e / million EUR  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 1203.84 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 49.68 % of assets                        |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                            |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                            |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Smart Industrial Technologies

| Largest investments     | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|-------------------------|--|----------------------------------|----------------------|
| Howmet Aerospace        | C - Manufacturing  | 3.6 %                            | United States        |
| Union Pacific Corp.     | H - Transporting and storage   | 2.8 %                            | United States        |

| United Parcel Service B | H - Transporting and storage   | 2.1 %                            | United States        |
| CSX Corp.               | H - Transporting and storage   | 1.9 %                            | United States        |
| Schneider Electric      | M - Professional, scientific and technical activities                    | 1.9 %                            | France               |
| Fanuc                   | C - Manufacturing  | 1.8 %                            | Japan                |
| W.W. Grainger           | G - Wholesale and retail trade; repair of motor vehicles and motorcycles | 1.8 %                            | United States        |
| Allegion                | M - Professional, scientific and technical activities                    | 1.8 %                            | United States        |
| Emerson Electric Co.    | C - Manufacturing  | 1.7 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.03% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 91.52%

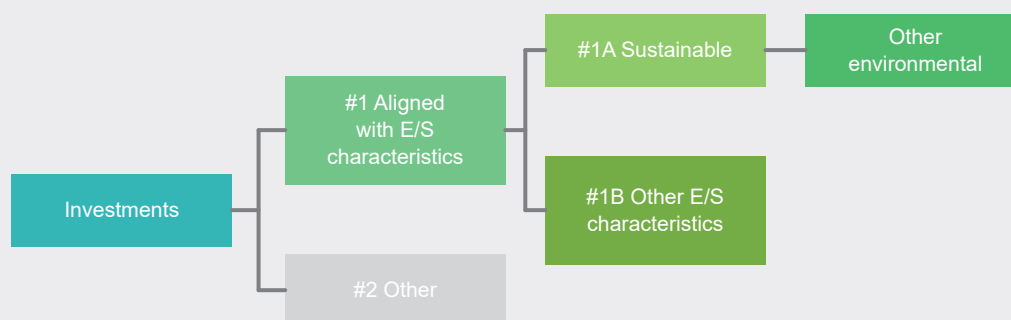

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.03% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 16.9% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

The actual share of sustainable investments with an environmental objective that were not compliant with the EU Taxonomy was 16.9%.

0.97% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Smart Industrial Technologies

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 0.6 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>49.7 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 16.9%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.89%.

What was the share of socially sustainable investments?

The sub-fund has not yet made a minimum allocation to socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.89%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.97% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. At least two-thirds of the sub-fund's assets were invested in equities of German and foreign issuers. In doing so, investments were made in equities that were active in the areas of the provision of forward-looking infrastructure and the production of future-oriented industrial goods and that derived at least 20% of their revenues in these areas. Up to one-third of the sub-fund's assets was invested in money market instruments and bank balances, respectively.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example,

concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were

considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Top Euroland

| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 11.22%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Top Euroland

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 0 % of assets     |
| Climate and Transition Risk Assessment B    | -           | 18.93 % of assets |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Top Euroland

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 186496.99 tCO2e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 378.96 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 666.1 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 8.99 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Top Euroland

| Largest investments                     | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|---|---|----------------------------------|----------------------|
| ASML Holding                            | M - Professional, scientific and technical activities | 8.9 %                            | Netherlands          |

| Stellantis                              | M - Professional, scientific and technical activities | 2.6 %                            | Netherlands          |
| VINCI                                   | M - Professional, scientific and technical activities | 2.5 %                            | France               |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.87% of portfolio assets.

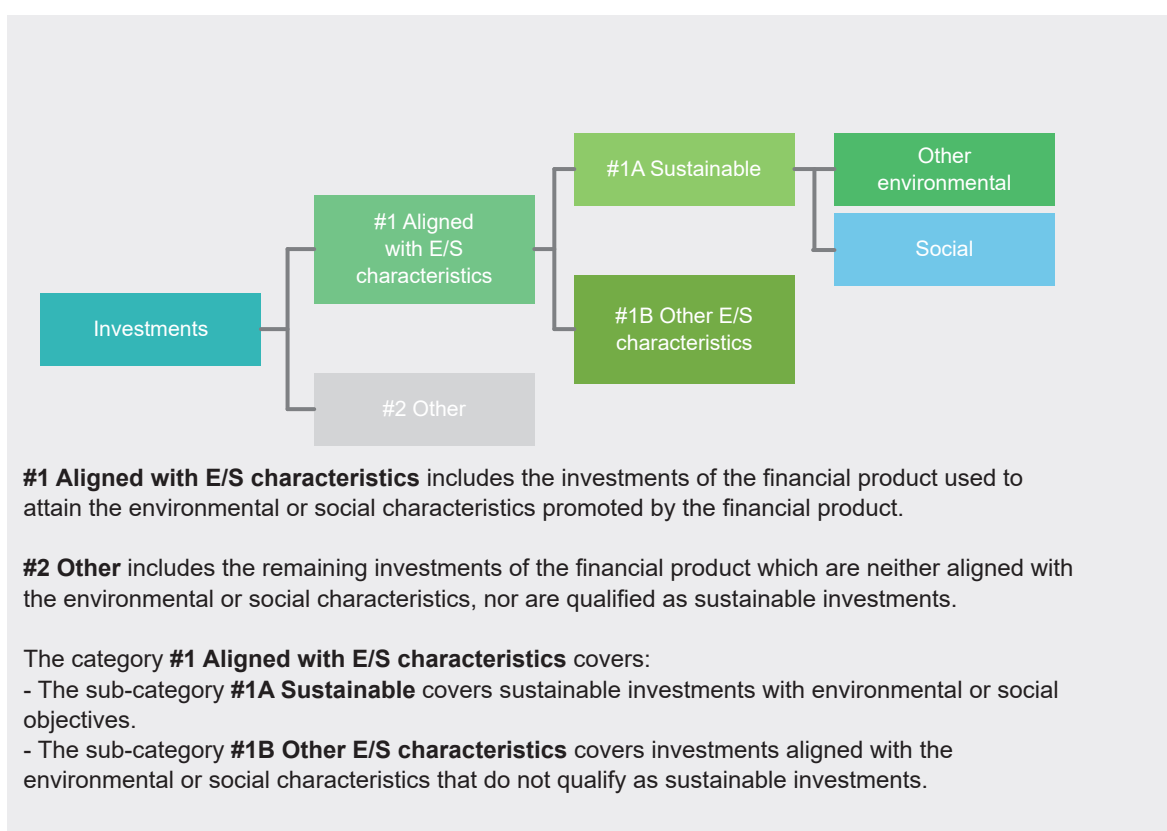

Proportion of sustainability-related investments for the previous year: 99.38%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 94.87% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 11.22% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 4.97% and the proportion of socially sustainable investments was 6.25%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

5.13% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

#### In which economic sectors were the investments made?

#### DWS Invest ESG Top Euroland

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.97%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 9.38%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 6.25%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 9.38%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.13% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. At least 75% of the sub-fund's assets were invested in equities of issuers having their headquarters in a member state of the European Economic and Monetary Union (EMU). The sub-fund focused on companies with a higher market capitalization. Additionally, the fund manager aimed to run a concentrated portfolio, e.g., 40–60 different stocks. Depending on the market situation, it was possible to deviate from the mentioned diversification target. Up to 25% of the sub-fund's assets could have been invested in short-term deposits, money market instruments, and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on

cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

### **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality

Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **DWS State Assessment** was used as indicator of the extent of state controversy regarding holistic governance, such as political and civil freedoms.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0 %

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0 %

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG USD Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 5.24 % of assets  |
| Climate and Transition Risk Assessment B    |             | 13.89 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Emission to water (no. 8);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Multi Asset Defensive

| Indicators   | Description  | Performance           |
|--|--|-----------------------|
| <b>Principal Adverse Impact</b>  |  |                       |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)   | 0 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 0 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector   | 0 % of assets         |
| PAII - 08. Emission to Water   | Wastewater discharged into surface waters (in tons) as a result of industrial or Production activities.  | 0 tons                |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets         |
| PAII - 14. Exposure to controversial weapons   |  | 0 % of assets         |

As of: November 23, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG USD Corporate Bonds

| Largest investments                       | Breakdown by sector according to NACE Codes                       | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through April 12, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through April 12, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.04%

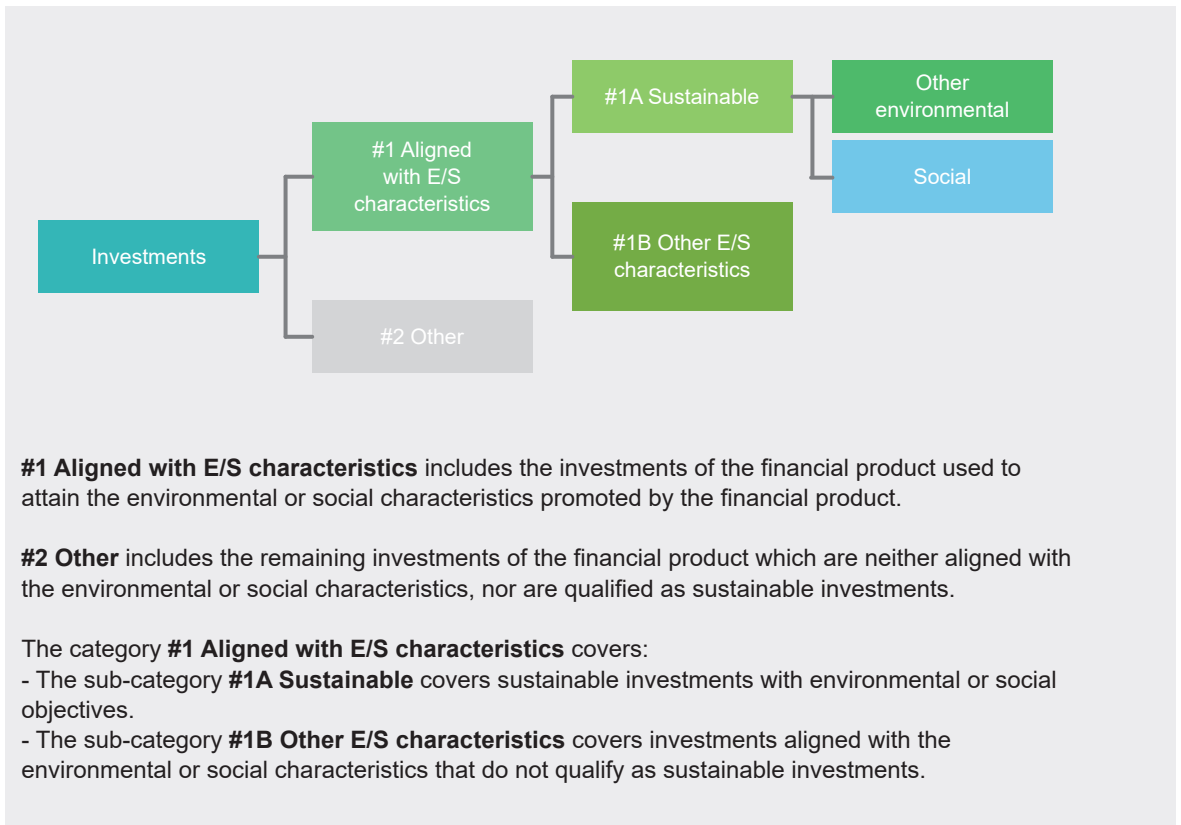

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 0% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

100% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

In which economic sectors were the investments made?

DWS Invest ESG USD Corporate Bonds

| Breakdown by sector                                    | in % of portfolio volume |
|--|--------------------------|
| Bank Balance   | 100 %                    |
| Exposure to companies active in the fossil fuel sector | 0.0 %                    |

As of: April 12, 2023

As this sub-fund was liquidated April 12, 2023, the reporting of the sectors was based on April 12, 2023, as no portfolio transactions took place between April 12, 2023 and the dissolution date.

Further information can be found in the asset overview in the annual report

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 0%. The value in the previous year was 18.02%

#### What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 0%. The value in the previous year was 18.02%

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. At least 80% of the sub-fund's assets should be invested globally in credit bonds. Credit bonds referred to government related bonds (Agency, Local Authority, Supranationals and Sovereign) and corporate bonds (Industrial, Utility, Financial Institutions). A maximum of 20% of the sub-fund's assets might be invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. The sub-fund assets were either denominated in USD or hedged against the USD. The sub-fund's investments in contingent convertibles should be limited to 10% of the sub-fund's net asset value.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

### **Exposure to controversial sectors**

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involved the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affected the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generated in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") were excluded as an investment.

### **DWS exclusions for controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generated from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of "F");
- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights and labor rights, customer and environmental safety, and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

Moreover, this sub-fund promoted social characteristics related to diversity and equality by investing in companies with a strong momentum and improvement in driving general diversity (including gender) within the company and companies which were already diversity leaders within their industries.

This sub-fund further promoted a minimum proportion of socially sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was being assessed via the application of an in-house DWS ESG assessment methodology as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology was applying a variety of assessment approaches that were being used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was being used as an indicator for an issuer’s exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was being used as an indicator for a company’s exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact Assessment** was being used as an indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was being used as an indicator for the comparison of an issuer’s environmental, social, and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was being used as an indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was being used as an indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** were being used as an indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS Social Commitment Assessment** was being used as an indicator to measure the issuer’s commitment to diversity and equality.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was being used as an indicator to measure the proportion of sustainable investments.  
Performance: 24.98%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Women for Women

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 2.49 % of assets  |
| Climate and Transition Risk Assessment B    |             | 15.23 % of assets |
| Climate and Transition Risk Assessment C    |             | 58.66 % of assets |
| Climate and Transition Risk Assessment D    |             | 20.29 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |

| Cluster munitions F                         |             | 0 % of assets |
| Depleted uranium weapons D                  |             | 0 % of assets |
| Depleted uranium weapons E                  |             | 0 % of assets |
| Depleted uranium weapons F                  |             | 0 % of assets |
| Nuclear weapons D                           |             | 0 % of assets |
| Nuclear weapons E                           |             | 0 % of assets |
| Nuclear weapons F                           |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund was partially investing in sustainable investments according to Article 2(17) SFDR. Such sustainable investments were contributing to at least one of the UN SDGs that related to social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 10: Reduced inequalities

The extent of the contribution to individual UN SDGs was varying depending on the actual investments in the portfolio.

DWS was determining the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were being used to assess the potential assets with regard to whether an economic activity could be considered as socially sustainable. As part of this assessment methodology, it was being determined whether (1) an economic activity made a positive contribution to one or more UN SDGs, (2) this economic activity or other economic activities of the company significantly harmed these goals ("Do Not Significantly Harm" - DNSH assessment) and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources, and/or internal assessments based on a defined assessment and classification methodology to determine whether an economic activity was socially sustainable. Activities that made a positive contribution to the UN SDGs were being assessed based on revenues, capital expenditure (CapEx), and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the economic activity was deemed socially sustainable if the DNSH assessment of the company was passed and the company followed good governance practices.

The share of sustainable investments as defined in Article 2(17) SFDR in the portfolio was being calculated in proportion to the economic activities of the issuers that qualified as socially sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was being counted towards the share of sustainable investments.

The sub-fund was currently not committing to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund was considering the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1)
- Carbon footprint (no. 2)
- GHG intensity of investee companies (no. 3)
- Exposure to companies active in the fossil fuel sector (no. 4)
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10)
- Board gender diversity (no. 13)
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14)

For sustainable investments, the principal adverse impacts were also being considered in the DNSH assessment as described above in the section “How were the indicators for adverse impacts on sustainability factors taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 6981.11 tCO <sub>2</sub> e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 172.22 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 454.38 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 12.38 % of assets                       |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 13. Board gender diversity  | Average ratio of female to male board members in investee companies, expressed as a percentage of all board members.  | 38.82 Percentage points (%)             |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives or as a result of regulatory clarifications). Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Women for Women

| Largest investments           | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|-------------------------------|---|----------------------------------|----------------------|
| Microsoft Corp.               | J - Information and communication                     | 3.7 %                            | United States        |

| Taiwan Semiconductor ADR      | C - Manufacturing                                     | 1.5 %                            | Taiwan               |
| L'Oreal S.A                   | M - Professional, scientific and technical activities | 1.5 %                            | France               |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 92.66% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 88.59%

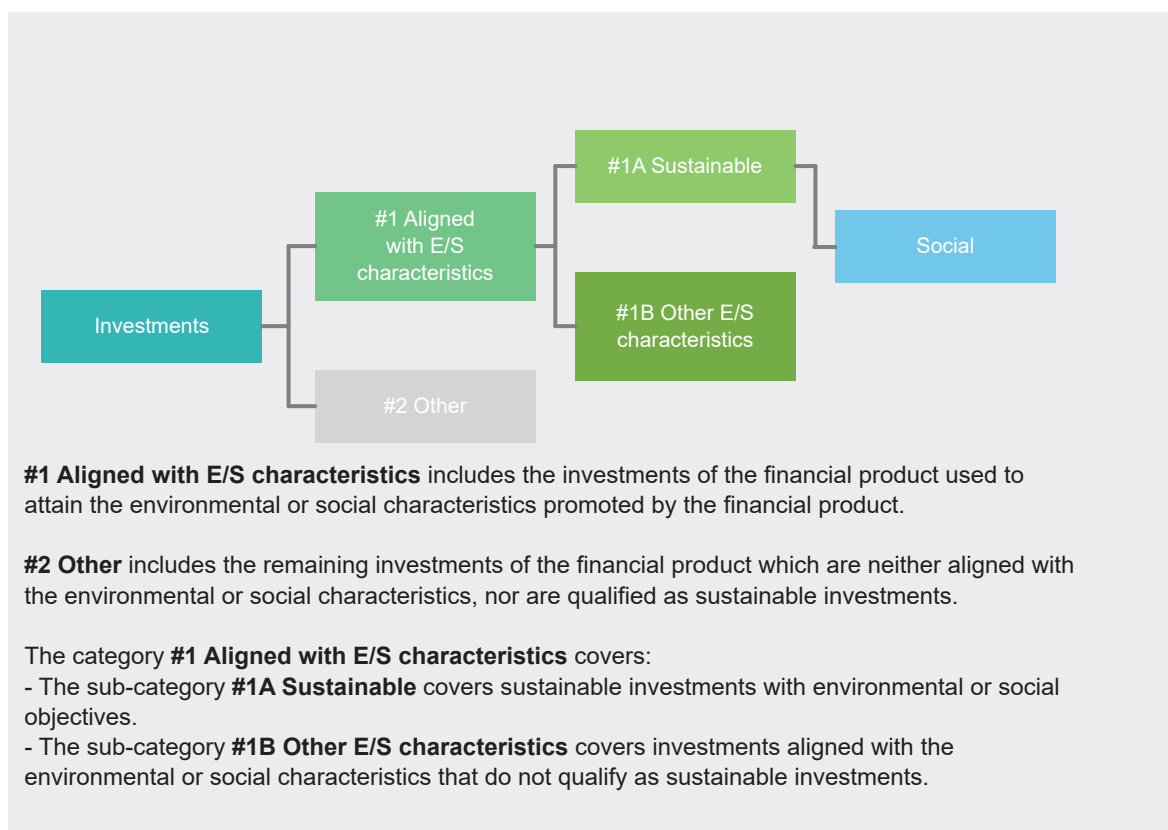

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

This sub-fund invested 92.66% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 24.98% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Of this, the minimum share of socially sustainable investments was 16.75%. The actual share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

7.34% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete, or which received a social commitment score of "D" (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

### In which economic sectors were the investments made?

#### DWS Invest ESG Women for Women

| NACE-Code | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 29.05%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 16.75%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 29.05%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). Additionally, this sub-fund invested up to 7.34% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete, or which received a social commitment score of “D” (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments used by the portfolio management for performance, diversification, liquidity, and hedging purposes. Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund was pursuing a strategy based on equities as the main investment strategy. The sub-fund was investing in companies with a strong focus on diversity and equality combined with sustainable business practices. At least 75% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds, and equity warrants issued by foreign and domestic companies. Up to 25% of the sub-fund's assets were invested in short-term deposits, money market instruments, and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### • **DWS ESG Assessment Methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which utilized data from several ESG data providers, public sources, and/or internal assessments to derive overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### • **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. Issuers with the highest severity of norm issues (i.e., a letter score of "F") were excluded as an investment.

#### • **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### • **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment had distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment had allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies had been made up from the same industry sector.

Companies that had scored higher in this comparison had received a better score, while companies that had scored lower in comparison had received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) had been excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment had assessed a country based on numerous ESG criteria. Indicators for environmental aspects had included the handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects had included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance had included the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment had explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) had been excluded as an investment.

• **Freedom House status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that had been labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): above 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund did excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions did only applied to so-called thermal coal, i.e., coal that had been used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Social Commitment Assessment**

In addition, the sub-fund management did sought to attain the promoted social characteristics in relation to diversity and equality by focusing on the Social Commitment Assessment of a company. The DWS Social Commitment Assessment considered the percentage of women in executive roles, flexible workplace environment, dependent care, the existence of a non-discrimination policy, and compliance with UN SDG 5. UN SDG 5 aims to achieve gender equality and empower all women and girls. Metrics incorporated into the factor along with other programs for workforce diversity, the percentage of women on the board of directors, controversies in labor or customer relations towards gender discrimination or harassment, child or forced labor, or labor discrimination including the supply chain, customer discrimination on the basis of disabilities.

The sub-fund management considered in its allocation the resulting scores from the DWS Social Commitment Assessment and invested in issuers that were classified in the highest three scores (i.e.,

letter scores “A” - “C”). Issuers with a low social commitment score (i.e., a letter score of “E” or “F”) were excluded as an investment.

#### • DWS Use of Proceeds Bond Assessment

Deviation from the assessment approaches described above nevertheless permitted an investment in bonds of excluded issuers if the particular requirements for use-of-proceeds bonds were met. In this case, the bond were first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not met these criteria were excluded.

#### • DWS Target Fund Assessment

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets may have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### • Non-ESG assessed asset classes

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not been taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments as defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Furthermore, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment. This assessment evaluated potential investments in relation to different criteria to conclude that an economic activity was considered as sustainable, as further detailed in the section ""What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?""

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Euro Corporate Bonds

**Legal entity identifier:** 5493006LOVYM1DRSZI25

**ISIN:** LU0300357554

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

#### How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 23.25%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Euro Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 6.29 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 7.81 % of assets  |
| Climate and Transition Risk Assessment C    | -           | 63.51 % of assets |
| Climate and Transition Risk Assessment D    | -           | 15.38 % of assets |
| Climate and Transition Risk Assessment E    | -           | 5.06 % of assets  |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 37.18 % of assets |
| ESG Quality Assessment B                    | -           | 23.07 % of assets |
| ESG Quality Assessment C                    | -           | 24.03 % of assets |
| ESG Quality Assessment D                    | -           | 10.5 % of assets  |
| ESG Quality Assessment E                    | -           | 2.64 % of assets  |
| ESG Quality Assessment F                    | -           | 0 % of assets     |

| Nuclear weapons E                           | -           | 0 % of assets     |
| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Euro Corporate Bonds

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 20.99 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives or as a result of regulatory clarifications).

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.63% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.61%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 98.63% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 23.25% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 16.39% and the minimum share of socially sustainable investments was 6.86%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

1.37% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Euro Corporate Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| NA  | Other  | 9.7 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>21.0 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 16.39%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.15%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 6.86%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.15%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 1.37% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund did acquire euro-denominated fixed and/or variable interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend-right certificates, equities, and equity warrants. At least 70% of the sub-fund's assets were invested in corporate bonds denominated in Euros that offered returns higher than those of comparable government bonds; investments were deliberately focused almost exclusively on issuers whose credit standing was considered by the market to be relatively good but not first-rate (investment-grade bonds). Up to 25% of the sub-fund's assets were invested in convertible bonds and warrant-linked bonds; no more than 10% were invested in participation and dividend-right certificates, equities, and equity warrants. The sub-fund's investments in asset-backed securities and mortgage-backed securities were limited to 20% of the sub-fund's net asset value. The sub-fund also concluded credit default swaps.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### Non-ESG assessed asset classes

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### DWS methodology for determining sustainable investments as defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment, which evaluated potential investments in relation to different criteria to conclude that an investment could be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Euro High Yield Corporates

**Legal entity identifier:** 549300DAGSZP56TFTT76

**ISIN:** LU0616839501

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 13.76% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 13.76%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Euro High Yield Corporates

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 2.76 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 2.17 % of assets  |
| Climate and Transition Risk Assessment C    | -           | 38.17 % of assets |
| Climate and Transition Risk Assessment D    | -           | 38.17 % of assets |
| Climate and Transition Risk Assessment E    | -           | 7.68 % of assets  |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 16.44 % of assets |
| ESG Quality Assessment B                    | -           | 17.37 % of assets |

| Nuclear weapons E                           | -           | 0 % of assets     |
| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Euro High Yield Corporates

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 19.94 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Euro High Yield Corporates

| Largest investments                           | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 82.44% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 97.25%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 82.44% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 13.76% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 8.66% and the minimum share of socially sustainable investments was 5.10%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

17.56% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Euro High Yield Corporates

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 0.1 %                    |

| NA  | Other  | 26.1 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>19.9 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.66%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 13.45%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5.10%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 13.45%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 17.56% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 70% of the sub-fund's assets were invested globally in corporate bonds that offered a non-investment grade status at the time of acquisition. Non-investment grade was encompassed BB+ and below rated bonds, including bonds with D rating and non-rated bonds. Currency risks versus the Euro in the portfolio were hedged. Up to 10% of the sub-fund's assets were invested in listed or non-listed equities in the due course of a re-structuring of fixed income instruments. A maximum of 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect of the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or are less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied, in particular, to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Euro-Gov Bonds

**Legal entity identifier:** 549300GWZOI706VXHT51

**ISIN:** LU0145652052

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective:</b> ____%                   | <input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy   |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ____%                           | <input type="checkbox"/> with a social objective   |
|  | <input checked="" type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Euro-Gov Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 10.87 % of assets |
| Climate and Transition Risk Assessment B    |             | 3.99 % of assets  |
| Climate and Transition Risk Assessment C    |             | 34.34 % of assets |
| Climate and Transition Risk Assessment D    |             | 43.27 % of assets |
| Climate and Transition Risk Assessment E    |             | 1.81 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 33.98 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

### How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).
- Investee countries subject to social violations (no. 16).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment, as described above in the section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

### DWS Invest Euro-Gov Bonds

| Indicators   | Description   | Performance      |
|--|---|------------------|
| <b>Principal Adverse Impact</b>  |   |                  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0.36 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises  | 0 % of assets    |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)   | 0 % of assets    |
| PAII - 16. Relative Percentage of investee countries subject to social violations          | Relative Percentage of investee countries subject to social violations, as referred to in international treaties and conventions, United Nations principles and, where applicable, national law | 0 Relative %     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.95% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 95.21%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.95% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0.05% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Euro-Gov Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|---|---|--------------------------|
| K   | Financial and insurance activities                            | 10.5 %                   |
| O   | Public administration and defence; compulsory social security | 89.4 %                   |
| NA  | Other   | 0.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | 0.4 %                    |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.8%.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.8%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.05% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 70% of the sub-fund's assets (after deduction of liquid assets) were invested in euro-denominated interest-bearing debt securities issued by states of the European Economic Area or the United Kingdom, government institutions within these states, and supranational public international bodies of which one or more of the states of the European Economic Area or the United Kingdom were members.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or are less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as

measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology. The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest European Equity High Conviction

| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country. P  
erformance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 18.62%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest European Equity High Conviction

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 1.41 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest European Equity High Conviction

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 15.68 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest European Equity High Conviction

| Largest investments                     | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|---|---|----------------------------------|----------------------|
| ASML Holding                            | M - Professional, scientific and technical activities   | 4.6 %                            | Netherlands          |

| VINCI                                   | M - Professional, scientific and technical activities   | 2.9 %                            | France               |
| Rentokil Initial                        | N - Administrative and support service activities       | 2.8 %                            | United Kingdom       |
| Roche Holding Profitsh.                 | M - Professional, scientific and technical activities   | 2.7 %                            | Switzerland          |
| Iberdrola (new)                         | D - Electricity, gas, steam and air conditioning supply | 2.6 %                            | Spain                |
| CRH                                     | C - Manufacturing                                       | 2.6 %                            | Ireland              |
| ING Groep                               | K - Financial and insurance activities                  | 2.5 %                            | Netherlands          |
| AstraZeneca                             | M - Professional, scientific and technical activities   | 2.5 %                            | United Kingdom       |
| Smurfit Kappa                           | C - Manufacturing                                       | 2.4 %                            | Ireland              |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.47% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 95.24%

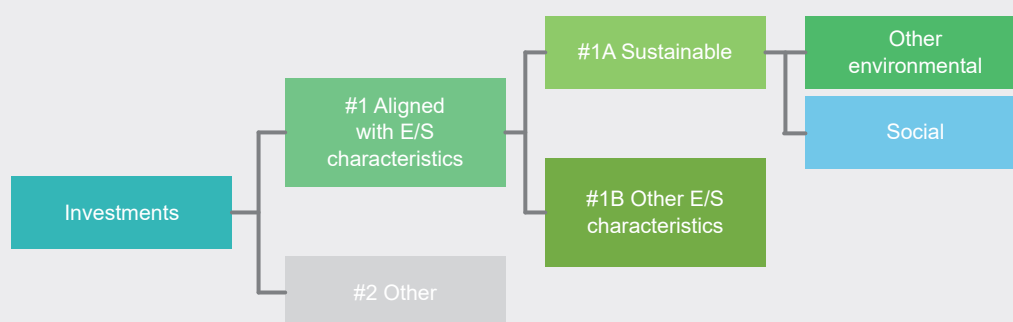

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.47% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 18.62% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 6.73% and the minimum share of socially sustainable investments was 11.89%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.53% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## In which economic sectors were the investments made?

### DWS Invest European Equity High Conviction

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying                                | 2.3 %                    |
| C   | Manufacturing                                       | 19.7 %                   |
| D   | Electricity, gas, steam and air conditioning supply | 2.8 %                    |
| H   | Transporting and storage                            | 2.4 %                    |
| I   | Accommodation and food service activities           | 3.3 %                    |
| K   | Financial and insurance activities                  | 23.4 %                   |
| L   | Real estate activities                              | 2.1 %                    |
| M   | Professional, scientific and technical activities   | 38.7 %                   |
| N   | Administrative and support service activities       | 2.2 %                    |
| NA  | Other   | 3.2 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>15.7 %</b>            |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.73%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 18.21%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 11.89%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 18.21%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.53% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 75% of the sub-fund's assets were invested in equities of issuers having their headquarters in a member state of the EU, the United Kingdom, in Norway, and/or in Iceland. High Conviction implies that – based on the investment decision of the portfolio management – single stocks were implemented with greater weightings and less diversification than a benchmark-oriented product. Single equity positions did have significant weightings, exceeding 5%, if a stock was regarded as attractive. Up to 25% of the sub-fund's assets were invested in interest-bearing securities. Convertible bonds and warrant-linked bonds did not constitute interest-bearing securities for the purposes of this sub-fund's investment policy. Up to 25% of the sub-fund's assets were invested in money market instruments and bank balances. A maximum of 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers were nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

### Sustainability investment assessment methodology

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section "What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The procedure to assess the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices. The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Financial Hybrid Bonds

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **DWS State Assessment** was used as indicator of the extent of state controversy regarding holistic governance, such as political and civil freedoms.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0 %

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0 %

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Financial Hybrid Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon Footprint (no. 2);
- Carbon Intensity (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Financial Hybrid Bonds

| Indicators   | Description   | Performance           |
|--|---|-----------------------|
| <b>Principal Adverse Impact</b>  |   |                       |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 0 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 0 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets         |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets         |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets         |

As of: October 20, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG USD Corporate Bonds

| Largest investments                             | Breakdown by sector according to NACE Codes | in % of average portfolio volume | Breakdown by country |
|---|---|----------------------------------|----------------------|
| DWS Institutional ESG Euro Money Market Fund IC | K - Financial and insurance activities      | 4.4 %                            | Luxembourg           |

for the timeframe January 1, 2023 until October 20, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through October 20, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.45%

### Asset allocation

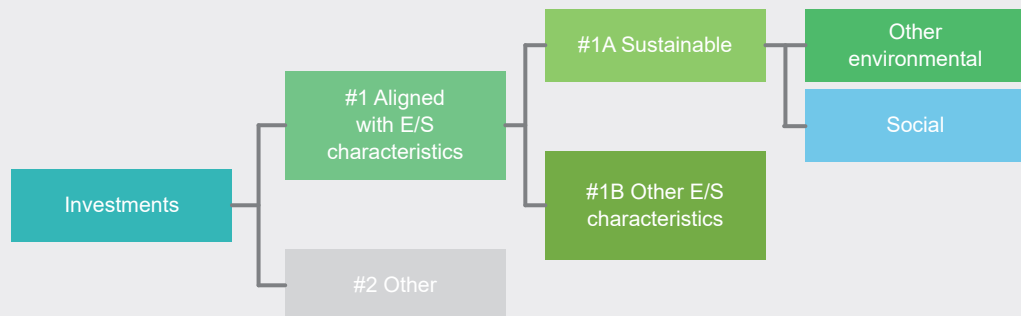

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 0% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 0% and the minimum share of socially sustainable investments was 0%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

100% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

## In which economic sectors were the investments made?

### DWS Invest Financial Hybrid Bonds

Breakdown by sector

in % of portfolio volume

Bank Balance

100 %

Exposure to companies active in the fossil fuel sector

0.0 %

Stand: 20. Oktober 2023

As this sub-fund was liquidated October 20, 2023, the reporting of the sectors was based on October 20, 2023, as no portfolio transactions took place between October 20, 2023 and the dissolution date.

Further information can be found in the asset overview in the annual report

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 9.82%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 9.82%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. At least 50% of the sub-fund's assets were invested globally in hybrid bonds issued by financial issuers. Up to 100% of the sub-fund's assets might be invested in subordinated bonds. Up to 10% of the sub-fund's assets might be invested in equities (via exercising conversion rights), including convertible preference shares. The sub-fund manager aimed to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS state assessment**

The DWS state assessment assessed the assessment of political and civil liberties. Sovereign issuers with high or excessive political and civil liberties controversies (i.e. an "E" or "F" rating) were excluded from investment.

#### • **Exposure to controversial sectors**

The ESG database defined certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involved the production or distribution of products in a controversial area ("controversial sectors"). Controversial sectors were defined, for example, as the civil firearms industry, military defence and tobacco. Other business sectors and business activities that affected the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, coal mining and coal-based power generation. Issuers were evaluated according to the share of total revenues they generated in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score.

As regards the involvement in tobacco and civil firearms, issuers (excluding target funds) with a moderate, high or excessive exposure (i.e. a letter score of "D", "E" or "F") were excluded as an investment.

As regards the involvement in the military defence industry, issuers (excluding target funds) with high or excessive exposure (i.e. a letter score of "E" or "F") were excluded as an investment.

As regards the involvement in coal mining and coal-based power generation or other controversial sectors and controversial business practices, issuers (excluding target funds) with excessive exposure (i.e. a letter score "F") were excluded as an investment.

#### • **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### • **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of "F");
- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest German Equities

**Legal entity identifier:** 5493007TJOUS8TQOIU47

**ISIN:** LU0740822621

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 19.03% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 19.03%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest German Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest German Equities

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 11.08 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest German Equities

| Largest investments                                | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|--|---|----------------------------------|----------------------|
| Allianz  | K - Financial and insurance activities                | 8.3 %                            | Germany              |
| SAP  | J - Information and communication                     | 8.2 %                            | Germany              |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.9% of portfolio assets.

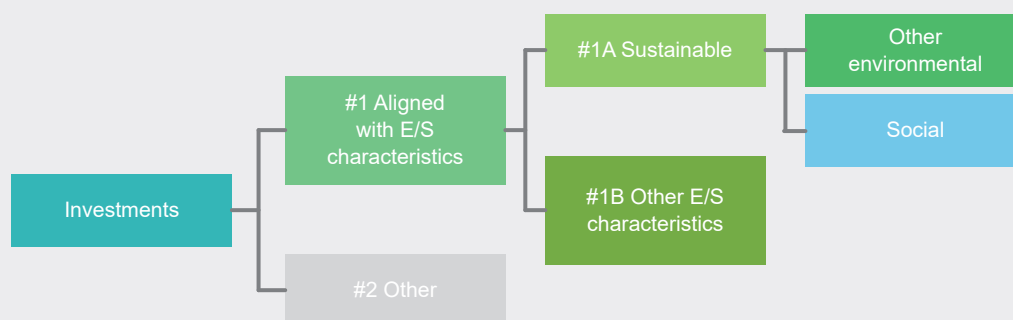

Proportion of sustainability-related investments for the previous year: 99.83%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.9% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 19.03% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 6.57% and the minimum share of socially sustainable investments was 12.46%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.1% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest German Equities

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 30.7 %                   |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 1.2 %                    |
| H   | Transporting and storage   | 6.0 %                    |
| J   | Information and communication  | 14.1 %                   |

| M   | Professional, scientific and technical activities                    | 22.5 %                   |
| N   | Administrative and support service activities                        | 1.4 %                    |
| NA  | Other  | 3.6 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>11.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.57%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.86%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 12.46%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.86%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics. In addition, this sub-fund invested 0.1% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other. Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 75% of the sub-fund's assets were invested in equities, investment certificates, equity warrants, equity-linked warrants, and subscription rights of German issuers. German issuers were defined as companies headquartered in Germany. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus. The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civilian handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. Additionally, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus had been excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds was met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that did not comply with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Global Agribusiness

**Legal entity identifier:** 549300EJ63GGG8PUEG20

**ISIN:** LU0273158872

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective:</b> ____%                   | <input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments. |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Global Agribusiness

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climate & Transition Risk Assessment     |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Global Agribusiness

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 17.03 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Global Agribusiness

| Largest investments         | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|-----------------------------|--|----------------------------------|----------------------|
| Nutrien                     | B - Mining and quarrying   | 3.8 %                            | Canada               |
| K+S Reg.                    | M - Professional, scientific and technical activities                    | 3.4 %                            | Germany              |

| SLC Agricola                | G - Wholesale and retail trade; repair of motor vehicles and motorcycles | 2.9 %                            | Brazil               |
| Nestlé Reg.                 | M - Professional, scientific and technical activities                    | 2.7 %                            | Switzerland          |
| Mondelez International Cl.A | C - Manufacturing  | 2.6 %                            | United States        |
| The Mosaic                  | C - Manufacturing  | 2.6 %                            | United States        |
| CF Industries Holdings      | M - Professional, scientific and technical activities                    | 2.6 %                            | United States        |
| Deere & Co.                 | C - Manufacturing  | 2.4 %                            | United States        |
| Mowi                        | A - Agriculture, forestry and fishing                                    | 2.3 %                            | Norway               |
| Bayer                       | C - Manufacturing  | 2.3 %                            | Germany              |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.05% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 96.42%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 98.05% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

1.95% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Global Agribusiness

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| A   | Agriculture, forestry and fishing                                    | 14.0 %                   |
| B   | Mining and quarrying   | 3.4 %                    |

| NA  | Other  | 7.5 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>17.0 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund does not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 4.84%.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 4.84%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 1.95% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets invested in shares, stock certificates, convertible bonds, and warrant-linked bonds whose underlying warrants were for securities, participation and dividend-right certificates, and equity warrants of foreign and domestic issuers having their principal business activity in or profiting from the agricultural industry. The relevant companies operated within the multi-layered food value chain. Up to 30% of the sub-fund's assets were invested in short-term deposits, money market instruments, and bank balances. A maximum of 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect of the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil hand guns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. Additionally, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus had been excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds was met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not met these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that did not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Global Bonds

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 25.06%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Global Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest Global Bonds

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 13.18 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.44% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.86%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.44% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 25.06% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 19.24% and the minimum share of socially sustainable investments was 5.82%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.56% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Global Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 9.5 %                    |
| D   | Electricity, gas, steam and air conditioning supply                  | 2.7 %                    |
| F   | Construction   | 1.8 %                    |

| O   | Public administration and defence; compulsory social security        | 17.5 %                   |
| NA  | Other  | 3.5 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>13.2 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 19.24%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 22.7%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5.82%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 22.7%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.56% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund's assets were globally invested in interest-bearing debt securities issued by sovereign institutions (central banks, government agencies, government authorities, and supra-national institutions) from developed countries or Emerging Markets; corporate bonds issued by companies from developed countries or Emerging Markets that may or may not have offered an investment-grade status at the time of acquisition; covered bonds; convertible bonds; subordinated bonds, or asset-backed securities. Investments in these assets accounted for up to 100% of the sub-fund's assets each. At least 95% of the sub-fund's assets were in EUR or hedged into EUR.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied, in particular, to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Global High Yield Corporates

**Legal entity identifier:** 222100NFGTM5U2CG7U22

**ISIN:** LU1506496097

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 10.42%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Global High Yield Corporates

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 0.82 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 0.63 % of assets  |
| Climate and Transition Risk Assessment C    | -           | 30.73 % of assets |
| Climate and Transition Risk Assessment D    | -           | 36.63 % of assets |
| Climate and Transition Risk Assessment E    | -           | 22.48 % of assets |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 11.91 % of assets |

| Nuclear weapons E                           | -           | 0 % of assets     |
| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest Global High Yield Corporates

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 20.62 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 84.57% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.64%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 84.57% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 10.42% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 4.18% and the minimum share of socially sustainable investments was 6.24%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

15.43% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Global High Yield Corporates

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 6.0 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>20.6 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.18%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.41%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 6.24%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.41%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 15.43% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. At least 70% of the sub-fund's assets were invested globally in corporate bonds that offered a non-investment grade status at the time of acquisition. Up to 20% of the sub-fund's assets were invested in equities, equity certificates, and dividend-rights. The sub-fund's investments in asset-backed securities and mortgage-backed securities was limited to 20% of the sub-fund's net asset value.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as

measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

- Issuers were excluded based on the following criteria:
  - Sovereign issuers labelled as "not free" by Freedom House;
  - Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
  - Companies with involvement in controversial weapons; or
  - Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 18.98% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 18.98%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Global Infrastructure

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 1.23 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 6.7 % of assets   |
| Climate and Transition Risk Assessment C    | -           | 24.07 % of assets |
| Climate and Transition Risk Assessment D    | -           | 20.78 % of assets |
| Climate and Transition Risk Assessment E    | -           | 46.51 % of assets |
| Climate and Transition Risk Assessment F    | -           | 0 % of assets     |
| ESG Quality Assessment A                    | -           | 46.54 % of assets |
| ESG Quality Assessment B                    | -           | 24.11 % of assets |
| ESG Quality Assessment C                    | -           | 17.92 % of assets |
| ESG Quality Assessment D                    | -           | 10.49 % of assets |

| Nuclear weapons E                           | -           | 0 % of assets     |
| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Global Infrastructure

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 73.18 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Global Infrastructure

| Largest investments            | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|--------------------------------|---|----------------------------------|----------------------|
| American Tower                 | J - Information and communication                       | 6.9 %                            | United States        |
| Enbridge                       | D - Electricity, gas, steam and air conditioning supply | 6.6 %                            | Canada               |
| National Grid                  | M - Professional, scientific and technical activities   | 5.7 %                            | United Kingdom       |
| Sempra                         | M - Professional, scientific and technical activities   | 5.0 %                            | United States        |
| VINCI                          | M - Professional, scientific and technical activities   | 4.6 %                            | France               |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.62% of portfolio assets.

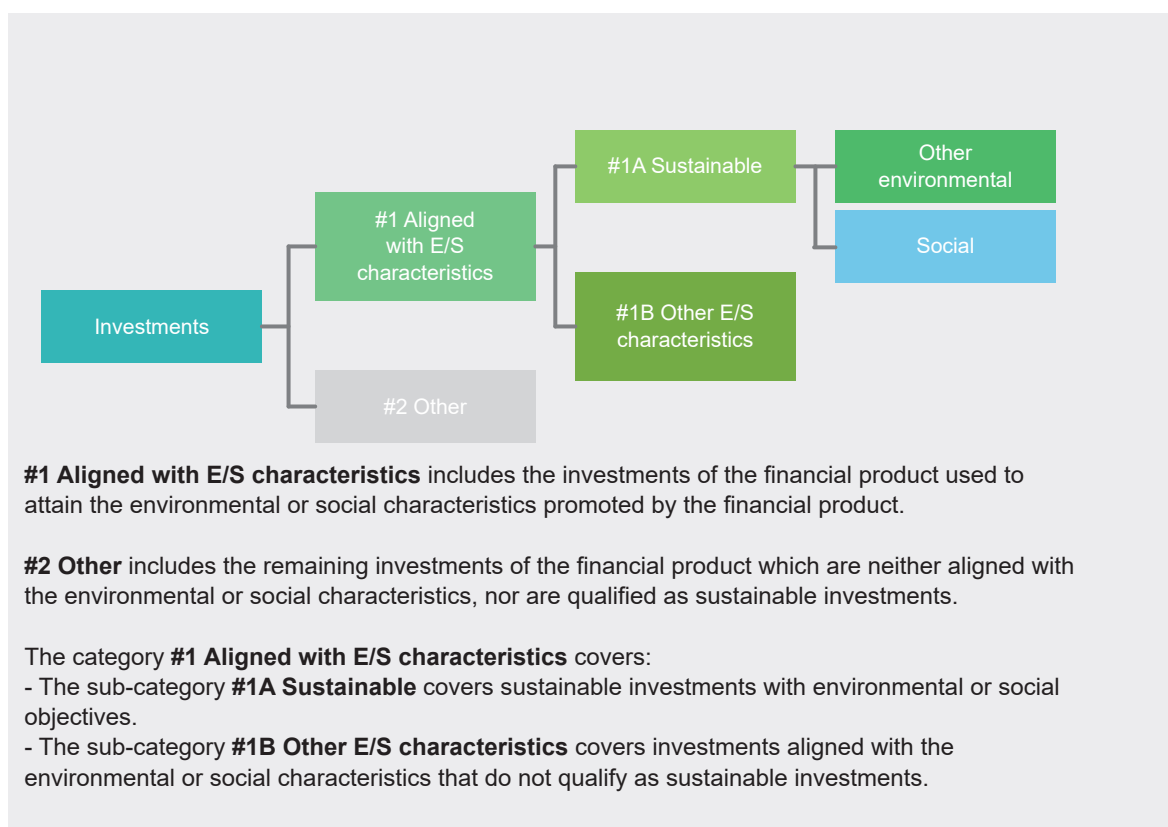

Proportion of sustainability-related investments for the previous year: 99.3%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 99.62% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 18.98% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 14.36% and the minimum share of socially sustainable investments was 4.62%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.38% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

#### In which economic sectors were the investments made?

#### DWS Invest Global Infrastructure

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 1.2 %                    |
| C   | Manufacturing  | 2.6 %                    |
| D   | Electricity, gas, steam and air conditioning supply                  | 39.0 %                   |
| E   | Water supply; sewerage; waste management and remediation activities  | 1.0 %                    |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 0.7 %                    |
| H   | Transporting and storage   | 9.2 %                    |
| J   | Information and communication  | 16.2 %                   |
| K   | Financial and insurance activities                                   | 2.1 %                    |
| M   | Professional, scientific and technical activities                    | 23.9 %                   |
| NA  | Other  | 4.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>73.2 %</b>            |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**  
Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**  
Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 14.36%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.48%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 4.62%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.48%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.38% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets (after deduction of liquid assets) were invested in equities, other equity securities, and uncertificated equity instruments of issuers of the "Global Infrastructure" sector. A maximum of 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as

measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Global Real Estate Securities

**Legal entity identifier:** 549300Z73T43NCO9DO30

**ISIN:** LU0507268943

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 34.49%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Global Real Estate Securities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Global Real Estate Securities

| Indicators   | Description   | Performance   |
|--|---|---------------|
| <b>Principal Adverse Impact</b>  |   |               |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Global Real Estate Securities

| Largest investments                     | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

| Iron Mountain REIT                      | L - Real estate activities                            | 1.7 %                            | United States        |
| Kite Realty Group Trust                 | L - Real estate activities                            | 1.7 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.89% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.42%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 98.89% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 34.49% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 20.45% and the minimum share of socially sustainable investments was 14.04%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

1.11% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Global Real Estate Securities

| NACE-Code   | Breakdown by sector according to NACE Codes       | in % of portfolio volume |
|---|---|--------------------------|

| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>0.0 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?'

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 20.45%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 32.34%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 14.04%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 32.34%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 1.11% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. The sub-fund primarily invested in the equities of listed companies that owned, developed, or managed real estate, provided that these equities were considered to be transferable securities as defined by Article 41(1) of the Law of 2010, on Undertakings for Collective Investment. In particular, the sub-fund acquired equities, interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants were for securities, equity warrants, and participation certificates. Additionally, the sub-fund's assets invested in index certificates on recognized equity indices. At least 70% of the fund's total assets were invested in equities of real estate companies, real estate investment companies including closed-ended real estate investment trusts (REITs) of any legal form, securities similar to equities, such as participation and dividend-right certificates, and derivative financial instruments like equity indices. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above permitted an investment in bonds of excluded issuers if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Low Carbon Corporate Bonds

**Legal entity identifier:** 254900P7KL1F8KBDUO70

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promoted the reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement.

Further, this sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environmental safety and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund has not designated a reference benchmark, i.e., an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management actively managed the portfolio and applied the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 to a considerable extent. The extent to which the sub-fund deviated from such methodological requirements is further described in the sections "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" and "What is the asset allocation planned for this financial product?".

However, the sub-fund designated the Solactive ISS Paris Aligned Select Euro Corporate IG Index as performance benchmark (Index).

How did the sustainability indicators perform?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics, as well as sustainable investment, were assessed via the application of an in-house DWS ESG assessment methodology, as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

The ESG assessment methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as an indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as an indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as an indicator for a comparison of an issuer's environmental, social, and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as an indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as an indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as an indicator to measure the proportion of sustainable investments.

Performance: 25.73%

Further, the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 applied considerably to attain the promoted reduction of carbon emissions, as described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?".

For that purpose, the sub-fund management used, in particular, the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) and (2) of Commission Delegated Regulation (EU) 2020/1818 for Paris-aligned Benchmarks;
- GHG intensity of the portfolio below the sub-fund's defined upper limit (which was further described below).

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Low Carbon Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 10.11 % of assets |
| Climate and Transition Risk Assessment B    |             | 6.16 % of assets  |
| Climate and Transition Risk Assessment C    |             | 78.08 % of assets |
| Climate and Transition Risk Assessment D    |             | 5.51 % of assets  |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

| Criteria | Involvement in controversial sectors <sup>1</sup> | Involvement in controversial weapons    | Norm Assessment <sup>8</sup>                               | ESG Quality Assessment                     | SDG-Assessment                                | Climate & Transition Risk Assessment      |
|----------|---|---|--|--|---|---|
| <b>A</b> | Non-involvement                                   | Confirmed non-involvement               | Confirmed no issues  | True leader in ESG (≥ 87.5 DWS ESG score)  | True SDG contributor (≥ 87.5 SDG score)       | True climate leader (≥ 87.5 score)        |
| <b>B</b> | Remote involvement                                | Alleged                                 |  | ESG leader (75–87.5 DWS ESG score)         | SDG contributor (75–87.5 SDG score)           | Climate solution provider (75–87.5 score) |
| <b>C</b> | 0% – 5%   | Dual-Purpose <sup>2</sup>               | Violations of lesser degree                                | ESG upper midfield (50–75 DWS ESG score)   | SDG upper midfield (50–75 SDG score)          | Low transition risk (50–75 score)         |
| <b>D</b> | 5% – 10% (coal: 5% -15%)                          | Owning <sup>3</sup> /Owned <sup>4</sup> |  | ESG lower midfield (25–50 DWS ESG score)   | SDG lower midfield (25–50 SDG score)          | Mod. transition risk (25–50 score)        |
| <b>E</b> | 10% – 25% (coal: 15% - 25%)                       | Component <sup>5</sup> producer         | High severity or re-assessed highest severity <sup>7</sup> | ESG laggard (12.5–25 DWS ESG score)        | SDG obstructer (12.5–25 SDG score)            | High transition risk (12.5–25 score)      |
| <b>F</b> | ≥ 25%   | Weapon producer                         | Highest severity/global compact violation <sup>8</sup>     | True laggard in ESG (0–12.5 DWS ESG score) | Significant SDG obstructer (0–12.5 SDG score) | Excessive transition risk (0–12.5 score)  |

(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.  
 (2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones  
 (3) Owning more than 20% equity.  
 (4) Being owned by more than 50% of company involved in grade E or F.  
 (5) Single purpose key component.  
 (6) Includes ILO controversies as well as corporate governance and product issues.  
 (7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.  
 (8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment, and the investment was not to be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and were adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact, and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were not considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How had the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest Low Carbon Corporate Bonds

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 8565.57 tCO2e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 190.17 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 552.13 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 8.27 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

### What were the top investments of this financial product?

#### DWS Invest Low Carbon Corporate Bonds

| Largest investments                             | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

### What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 88.43% of portfolio assets.  
Proportion of sustainability-related investments for the previous year: 93.78%

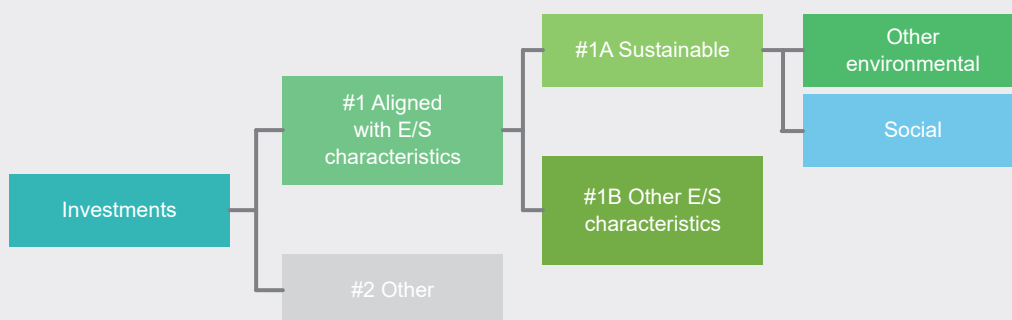

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested at least 88.43% of its net assets in investments that were aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 25.73% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that did not comply with the EU taxonomy was 17.57%, and the minimum share of socially sustainable investments was 8.16%. The actual share of sustainable investments with an environmental objective that did not comply with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

Up to 11.57% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology and the carbon emissions reduction methodology were not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions as well as the carbon emission reduction methodology. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Low Carbon Corporate Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing                                       | 5.8 %                    |
| D   | Electricity, gas, steam and air conditioning supply | 0.9 %                    |
| H   | Transporting and storage                            | 3.5 %                    |
| I   | Accommodation and food service activities           | 0.4 %                    |
| J   | Information and communication                       | 8.8 %                    |
| K   | Financial and insurance activities                  | 61.7 %                   |
| L   | Real estate activities                              | 0.4 %                    |
| M   | Professional, scientific and technical activities   | 8.1 %                    |

| Q   | Human health and social work activities             | 0.5 %                    |
| NA  | Other   | 9.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>8.3 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 17.57%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.66%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 8.16%. There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.66%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested up to 11.57% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology and the carbon emissions reduction methodology were not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions as well as the carbon emissions reduction methodology. This tolerance did not applied to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments were used by the portfolio management for performance, diversification, liquidity, and hedging purposes.

Minimum environmental or social safeguards were not or were only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities issued by corporates worldwide that were very low CO2 emitters, as well as issuers that were in the process of transitioning to low emissions. At least 75% of the sub-fund's assets were invested globally in interest-bearing debt securities that had an investment-grade status at the time of acquisition. A maximum of 25% of the sub-fund's assets were invested in interest-bearing debt securities with a non-investment-grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. At least 70% of the sub-fund's assets were in EUR or hedged into EUR.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics and the carbon emission reduction strategy, as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology and the carbon emission reduction strategy, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset was generally eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

## **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

## **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): above 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

## **DWS Exclusion for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

## **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds,

social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that were directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applies in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the above-described DWS ESG assessment methodology and the exclusions included in the carbon emission reduction methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology and the carbon emission reduction methodology.

#### **Carbon emissions reduction methodology**

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applied the following:

#### **Exclusions**

The sub-fund management excluded all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that were found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution, or refining of hard coal and lignite;
- (e) Companies that derived 10% or more of their revenues from the exploration, extraction, distribution, or refining of oil fuels;
- (f) Companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing, or distribution of gaseous fuels;
- (g) Companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO<sub>2</sub> e/kWh.

Further, the sub-fund management excluded any companies that were found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

#### **Reduction of the GHG intensity of the portfolio**

The sub-fund management defined a corporate debt portfolio that has a 50% reduced GHG intensity (Scope 1, 2, and 3 GHG emissions divided by EVIC) in comparison to the iBoxx Euro Corporate Index and starts with a GHG intensity of 300 tons of GHG emissions per million enterprise value including

cash (300t CO2e/USD million EVIC). This starting value of the GHG intensity referred to the launch date of the first share class of the sub-fund and was referred to as the “upper limit” in the following. The upper limit for the overall portfolio carbon intensity was reduced, on average, year over year, by (EVIC inflation-adjusted) 7%, and it will end with a value of zero for the carbon intensity. The GHG intensity of the sub-fund’s portfolio was significantly lower compared to the determined upper limit and was allowed to fluctuate year over year, as long as it stayed below the upper limit (EVIC inflation-adjusted).

DWS used MSCI's CO2 emission data to calculate the GHG intensity, whereby the dataset represented a company's Scope 1, Scope 2, and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS used CO2 emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2, and Scope 3 emission intensity data was not available or incomplete, the Scope 1, Scope 2, and Scope 3 emission intensity were estimated through a peer group comparison or alternatively, the investment was allocated to the remaining investments of the sub-fund which were neither aligned with the environmental or social characteristics, nor were qualified as sustainable investments (#2 Other) as further described in “What is the asset allocation planned for this financial product?”.

#### **DWS methodology for determining sustainable investments as defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that an investment was considered as sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies follow good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Metaverse

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 7.68%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Metaverse

| Indicators   | Description   | Performance   |
|--|---|---------------|
| <b>Principal Adverse Impact</b>  |   |               |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Metaverse

| Largest investments      | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|--------------------------|--|----------------------------------|----------------------|

for the period from February 15, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from February 15, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97% of portfolio assets.

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 97% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 7.68% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 4.49% and the minimum share of socially sustainable investments was 3.19%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

3% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Metaverse

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| NA  | Other  | 11.3 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | 0.0 %                    |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.49%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 3.19%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 3% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. The sub-fund's assets were primarily invested in equities of companies whose business benefited from or was currently related to the evolution of the digital world, especially the metaverse. At least 70% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds, and equity warrants issued by foreign and domestic companies. The securities issued by these companies might be listed on Chinese (including the Shenzhen-Hong Kong and Shanghai-Hong Kong Stock Connect) or other foreign securities exchanges or traded on other regulated markets in a member country of the Organisation for Economic Co-operation and Development (OECD) that operated regularly and were recognized and open to the public. At least 60% of the sub-fund's assets were invested in equities.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to these risks, receive better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") are excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above permitted an investment in bonds of excluded issuers if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

#### **DWS methodology for determining sustainable investments as defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments, DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that an investment was considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Multi Opportunities

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 20.61%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Multi Opportunities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Multi Opportunities

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 14.83 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0.07 % of assets  |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 92.21% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.76%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 92.21% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 20.61% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 8.15% and the minimum share of socially sustainable investments was 12.46%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

7.79% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Multi Opportunities

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.15%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.62%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 12.46%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.62%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 7.79% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as its main investment strategy. The sub-fund invested in equities, interest-bearing securities, certificates on equities, bonds and indices, investment funds, derivatives, convertible and warrant-linked bonds whose warrants related to securities, warrants on securities, participation and dividend-right certificates, money market instruments, and cash. Depending on the evaluation of the market situation, the portfolio manager weighted such asset classes in the portfolio of the sub-fund and, if necessary, fully invested the sub-fund's assets in one of these categories. The sub-fund's investments in asset-backed securities and mortgage-backed securities were limited to 20% of the sub-fund's net asset value. The sub-fund also intended from time to time to utilize the developments on the international natural resources and commodity markets up to 10% of the sub-fund's assets.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Financial Hybrid Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 9.57 % of assets  |

| Tobacco E                                   |             | 0 % of assets     |
| Tobacco F                                   |             | 0 % of assets     |
| <b>Involvement in controversial weapons</b> |             |                   |
| Anti-personnel mines D                      |             | 0 % of assets     |
| Anti-personnel mines E                      |             | 0 % of assets     |
| Anti-personnel mines F                      |             | 0 % of assets     |
| Cluster munitions D                         |             | 0 % of assets     |
| Cluster munitions E                         |             | 0 % of assets     |
| Cluster munitions F                         |             | 0 % of assets     |
| Depleted uranium weapons D                  |             | 0 % of assets     |
| Depleted uranium weapons E                  |             | 0 % of assets     |
| Depleted uranium weapons F                  |             | 0 % of assets     |
| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Multi Strategy

| Indicators   | Description   | Performance   |
|--|---|---------------|
| <b>Principal Adverse Impact</b>  |   |               |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets |

As of: December 14, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG USD Corporate Bonds

| Largest investments                        | Breakdown by sector according to NACE Codes          | in % of average portfolio volume | Breakdown by country |

for the timeframe January 1, 2023 until December 14, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 14, 2023

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.69%

**Asset allocation**

describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund was liquidated on December 14, 2023. As of its liquidation date it invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

100% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category #1 Aligned with E/S characteristics covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

DWS Invest Multi Strategy

Breakdown by sector

in % of portfolio volume

Bank Balance

100 %

Exposure to companies active in the fossil fuel sector

0.0 %

Stand: 20. Oktober 2023

As this sub-fund was liquidated December 14, 2023, the reporting of the sectors was based on December 14, 2023, as no portfolio transactions took place between December 14, 2023 and the dissolution date.

Further information can be found in the asset overview in the annual report

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

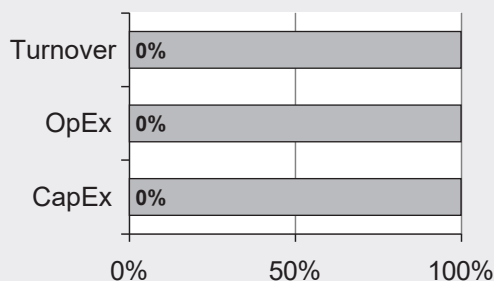

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

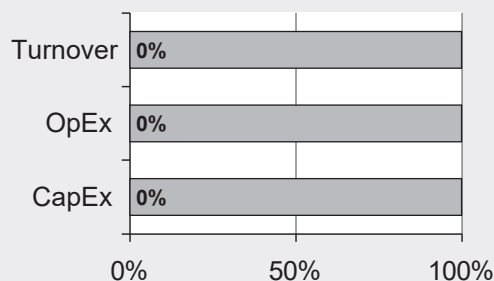

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.84%.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a minimum allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.84%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as its main investment strategy. The sub-fund invested globally in interest-bearing securities, equities, convertible bonds, warrant-linked bonds whose underlying warrants related to securities, participation and dividend-right certificates, investment funds, derivatives, as well as in money market instruments, deposits, and cash. The sub-fund's investments in the above-mentioned assets might account for up to 100% of the sub-fund's assets each. However, the sub-fund's investments in equities, participation and dividend-right certificates were limited to 35%, and the sub-fund's investments in investment funds were limited to 10%.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **• Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of "F");
- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The sub-fund promoted the reduction of carbon emissions with the aim of achieving the long-term global warming objectives of the Paris Agreement.

Furthermore, this sub-fund promoted environmental and social characteristics related to climate, governance, and social norms, as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights and labor rights, customer and environmental safety, and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

The sub-fund did not designate a reference benchmark, i.e., an EU Paris-aligned Benchmark as qualified in accordance with Regulation (EU) 2016/1011, for the purpose of attaining the promoted low carbon emission exposure in view of the Paris Agreement. The sub-fund management actively managed the portfolio and applied the methodological requirements for a Paris-aligned Benchmark as set out in Commission Delegated Regulation (EU) 2020/1818 to a considerable extent. The extent to which the sub-fund deviated from such methodological requirements was further described in "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" and "What is the asset allocation planned for this financial product?".

## How did the sustainability indicators perform?

The attainment of the promoted reduction of carbon emissions and the environmental and social characteristics, as well as sustainable investment, was assessed via the application of an in-house DWS ESG assessment methodology as further described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.

The ESG assessment methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer’s exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as an indicator for an issuer’s exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact Assessment** was used as an indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as an indicator for the comparison of an issuer’s environmental, social, and governance risks in relation to their peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as an indicator for a company’s involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as an indicator for a company’s involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (Sustainability Investment Assessment)** was used as an indicator to measure the proportion of sustainable investments.

Performance: 29.82%

Further, the methodological requirements of Commission Delegated Regulation (EU) 2020/1818 were applied considerably to attain the promoted reduction of carbon emissions as described in the section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. For that purpose, the sub-fund management did use, in particular, the following sustainability indicators:

- Exclusions as specified in Art. 12 (1) and (2) of Commission Delegated Regulations (EU) 2020/1818 for Paris-aligned Benchmarks.

- 50% reduction of greenhouse gas (GHG) intensity of the portfolio compared to the investable universe.

- Setting of a decarbonization trajectory – with at least 7% (EVIC inflation-adjusted) reduction of GHG intensity on average per annum.

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Qi Global Climate Action

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0.59 % of assets  |
| Climate and Transition Risk Assessment B    |             | 21.01 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with “A” being the best score and “F” being the worst score

| Criteria | Involvement in controversial sectors <sup>1</sup> | Involvement in controversial weapons    | Norm Assessment <sup>8</sup>                               | ESG Quality Assessment                     | SDG-Assessment                                | Climate & Transition Risk Assessment      |
|----------|---|---|--|--|---|---|
| <b>A</b> | Non-involvement                                   | Confirmed non-involvement               | Confirmed no issues  | True leader in ESG (≥ 87.5 DWS ESG score)  | True SDG contributor (≥ 87.5 SDG score)       | True climate leader (≥ 87.5 score)        |
| <b>B</b> | Remote involvement                                | Alleged                                 |  | ESG leader (75–87.5 DWS ESG score)         | SDG contributor (75–87.5 SDG score)           | Climate solution provider (75–87.5 score) |
| <b>C</b> | 0% – 5%   | Dual-Purpose <sup>2</sup>               | Violations of lesser degree                                | ESG upper midfield (50–75 DWS ESG score)   | SDG upper midfield (50–75 SDG score)          | Low transition risk (50–75 score)         |
| <b>D</b> | 5% – 10% (coal: 5% -15%)                          | Owning <sup>3</sup> /Owned <sup>4</sup> |  | ESG lower midfield (25–50 DWS ESG score)   | SDG lower midfield (25–50 SDG score)          | Mod. transition risk (25–50 score)        |
| <b>E</b> | 10% – 25% (coal: 15% - 25%)                       | Component <sup>5</sup> producer         | High severity or re-assessed highest severity <sup>7</sup> | ESG laggard (12.5–25 DWS ESG score)        | SDG obstructer (12.5–25 SDG score)            | High transition risk (12.5–25 score)      |
| <b>F</b> | ≥ 25%   | Weapon producer                         | Highest severity/global compact violation <sup>8</sup>     | True laggard in ESG (0–12.5 DWS ESG score) | Significant SDG obstructer (0–12.5 SDG score) | Excessive transition risk (0–12.5 score)  |

- (1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.
- (2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones
- (3) Owning more than 20% equity.
- (4) Being owned by more than 50% of company involved in grade E or F.
- (5) Single purpose key component.
- (6) Includes ILO controversies as well as corporate governance and product issues.
- (7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.
- (8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case significant harm was identified, the issuer failed the DNSH assessment, and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under Article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments, and might have been adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact, and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were not considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest Qi Global Climate Action

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 1941.71 tCO2e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 128.47 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 389.2 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 9.23 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Qi Global Climate Action

| Largest investments                    | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|--|---|----------------------------------|----------------------|
| Merck & Co.                            | C - Manufacturing                                     | 2.1 %                            | United States        |
| Johnson & Johnson                      | C - Manufacturing                                     | 1.9 %                            | United States        |
| Motorola Solutions                     | C - Manufacturing                                     | 1.9 %                            | United States        |

| Roche Holding Profitsh.                | M - Professional, scientific and technical activities | 1.3 %                            | Switzerland          |
| UnitedHealth Group                     | M - Professional, scientific and technical activities | 1.3 %                            | United States        |
| Jack Henry & Associates                | J - Information and communication                     | 1.2 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98.8% of portfolio assets.

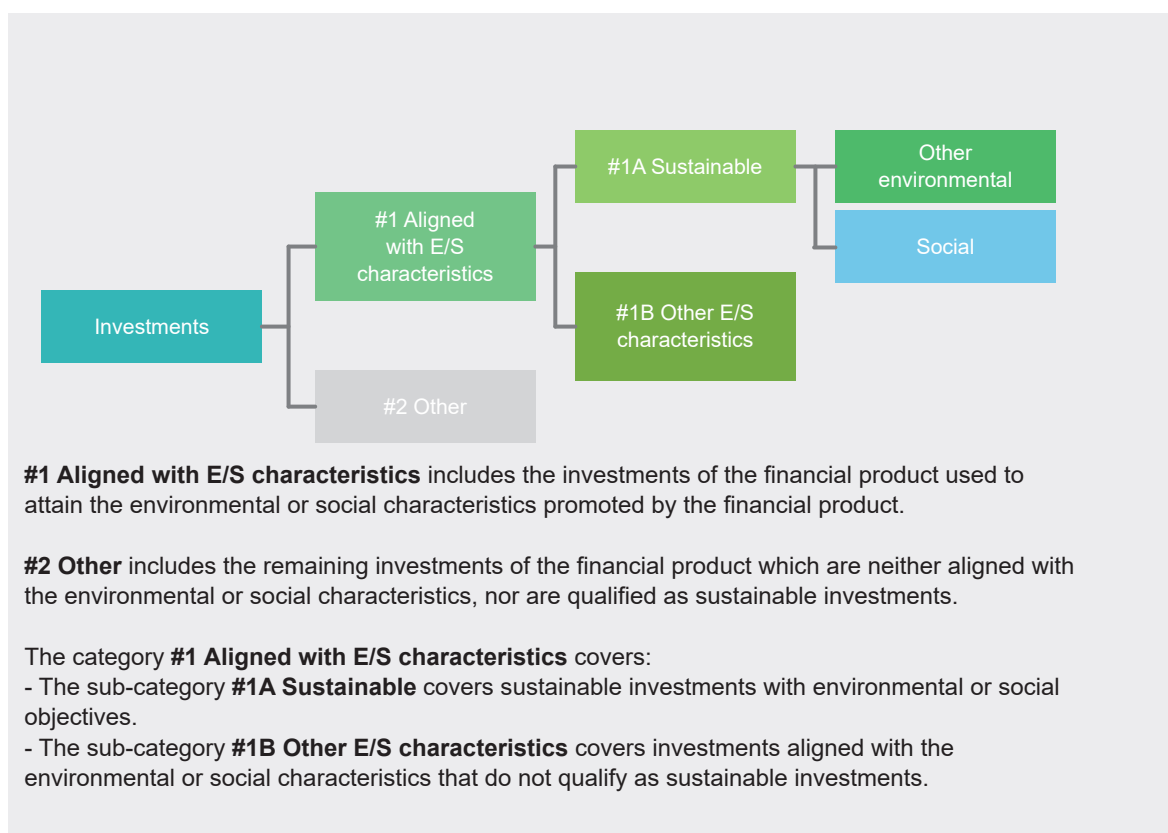

Proportion of sustainability-related investments for the previous year: 80%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested at least 98.8% of its net assets in investments that were aligned with the promoted environmental and social characteristics and the carbon emission reduction strategy (#1 Aligned with E/S characteristics). Within this category, at least 29.82% of the sub-fund's assets qualified as sustainable investments (#1A Sustainable). Thereof, the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 7.23%, and the minimum share of socially sustainable investments was 22.59%. The actual share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

Up to 1.2% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology and the carbon emissions reduction methodology were not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions as well as the carbon emissions reduction methodology. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment). A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#### In which economic sectors were the investments made?

#### DWS Invest Qi Global Climate Action

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| F   | Construction   | 0.7%                     |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 6.9%                     |
| H   | Transporting and storage   | 2.5%                     |
| J   | Information and communication  | 15.3%                    |
| K   | Financial and insurance activities                                   | 13.4%                    |
| L   | Real estate activities   | 1.4%                     |
| M   | Professional, scientific and technical activities                    | 12.5%                    |
| N   | Administrative and support service activities                        | 0.3%                     |
| Q   | Human health and social work activities                              | 0.5%                     |
| NA  | Other  | 1.5%                     |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>9.2%</b>              |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 7.23%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 31.91%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 22.59%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 31.91%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested up to 1.2% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology and the carbon emissions reduction methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions as well as the carbon emissions reduction methodology. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments did include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments were used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund's assets were invested in assets that contributed to the promoted reduction of carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change. At least 80% of the sub-fund's assets were invested in global equities. In the portfolio construction, the sub-fund management focused on constructing an equity portfolio that was expected to have lower volatility in comparison to the broad equity market. "Qi" related to the stock selection, which was based on a proprietary quantitative investment approach managed by the quantitative investments (Qi) group.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics and the carbon emission reduction strategy as described in the following sections.

The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology and the carbon emission reduction strategy, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which utilized data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

### **UN Global Compact assessment**

In addition to the DWS Norm assessment, companies were excluded if they were directly involved in one or more very serious, unresolved controversies related to the principles of the UN Global Compact.

The peer group for companies comes from the same industry. The companies rated better in this comparison received a better rating, while the companies rated worse in the comparison received a worse rating. Companies with the worst rating compared to their peer group (i.e. an “F” rating) were excluded from investment. Sovereign issuers were assessed according to various ESG criteria as part of the DWS ESG quality assessment. Indicators for ecological aspects included, for example, dealing with climate change, natural resources and vulnerability to disasters; indicators for social aspects included attitudes towards child labor, equality and prevailing social conditions; and indicators of good governance included, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG quality assessment explicitly took into account a country's civil and democratic freedoms. Sovereign issuers with the worst rating (i.e. an “F” rating) compared to their peer group (there are separate groups for developed and emerging markets) were excluded from investment.

### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up of the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, the handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

### **Freedom House status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the above-described DWS ESG assessment methodology and the exclusions included in the carbon emissions reduction methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology and the carbon emissions reduction methodology.

### **Carbon emissions reduction methodology**

In a second step and to contribute to the promoted Paris-aligned reduction of carbon emissions, the sub-fund management applied the following:

#### **• Exclusions**

The sub-fund management excluded all of the following as an investment:

- (a) Companies involved in any activities related to controversial weapons;
- (b) Companies involved in the cultivation and production of tobacco;
- (c) Companies that were found in violation of the United Nations Global Compact (UNGC) principles or the Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- (d) Companies that derived 1% or more of their revenues from exploration, mining, extraction, distribution, or refining of hard coal and lignite;
- (e) Companies that derived 10% or more of their revenues from the exploration, extraction, distribution, or refining of oil fuels;
- (f) Companies that derived 50% or more of their revenues from the exploration, extraction, manufacturing, or distribution of gaseous fuels;
- (g) Companies that derived 50% or more of their revenues from electricity generation with a GHG intensity of more than 100 g CO<sub>2</sub> e/kWh.

Further, the sub-fund management excluded any companies that were found or, as relevant, estimated to significantly harm one or more of the environmental objectives referred to in Art. 9 of Regulation (EU) 2020/852.

• **Decarbonisation trajectory**

As an additional action to reduce the climate risk even further, the sub-fund management reduced the upper limit for the overall GHG intensity of the portfolio year over year on average by (EVIC inflation-adjusted) 7%. The decarbonization trajectory started on 31.10.2022 with the fixed reference value of 180t CO2e/EUR million EVIC and would end with a value of zero for the GHG intensity. The target reduction of on average (by EVIC inflation-adjusted) 7% year over year was calculated geometrically.

Information about the decarbonization trajectory of the sub-fund's portfolio would be included in the sub-fund's annual report.

DWS used MSCI's CO2 emission data to calculate the GHG intensity, whereby the dataset represented a company's Scope 1, Scope 2, and Scope 3 greenhouse gas emissions as reported (if available) or estimated by MSCI's proprietary estimation models.

DWS did use CO2 emissions data from other providers. For portfolio constituents where the Scope 1, Scope 2, and Scope 3 emission intensity data were not available or incomplete, the Scope 1, Scope 2, and Scope 3 emission intensity might be estimated through a peer group comparison or alternatively, the investment was allocated to the remaining investments of the sub-fund which were neither aligned with the environmental or social characteristics, nor qualified as sustainable investments (#2 Other) as further described in "What is the asset allocation planned for this financial product?".

**DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest SDG Corporate Bonds

**Legal entity identifier:** 25490081R81SN3UWSM78

**ISIN:** LU2442814435

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environmental safety and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund did not designate a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.  
No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.  
No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.  
No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.  
Performance: 0%
- **DWS SDG Investment Assessment** was used as indicator to measure the allocation to issuers contributing to the UN SDGs.  
Performance: 0%
- **DWS Use of Proceeds Bond Assessment** was used as indicator for qualifying a bond as use-of-proceeds bond that follows recognized industry standards and to check whether the issuer met defined ESG criteria.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 61.79%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest SDG Corporate Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| ESG Quality Assessment A                    | -           | 55,32 % of assets |
| ESG Quality Assessment B                    | -           | 26,38 % of assets |
| ESG Quality Assessment C                    | -           | 17,34 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment was to be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the issuer followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Activities that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the economic activity was deemed sustainable if the DNSH assessment of the company was passed and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond counted towards the share of sustainable investments.

The sub-fund did not commit to targeting a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an investment with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the investment failed the DNSH assessment and could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## How did this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts on sustainability factors will be provided in an annex to the sub-fund’s annual report.

## DWS Invest SDG Corporate Bonds

| Indicators   | Description   | Performance                |
|--|---|----------------------------|
| <b>Principal Adverse Impact</b>  |   |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                 | 2635.74 tCO2e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).             | 323.41 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 591.87 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 23.79 % of assets          |
| PAII - 07. Activities negatively affecting biodiversity sensitive areas                    | Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas. | 0 % of assets              |
| PAII - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.   | 0 tonnes / million EUR     |
| PAII - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average.  | 2.72 tonnes / million EUR  |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                       | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).  | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest SDG Corporate Bonds

| Largest investments                             | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|---|---|----------------------------------|----------------------|

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 86.88% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.05%

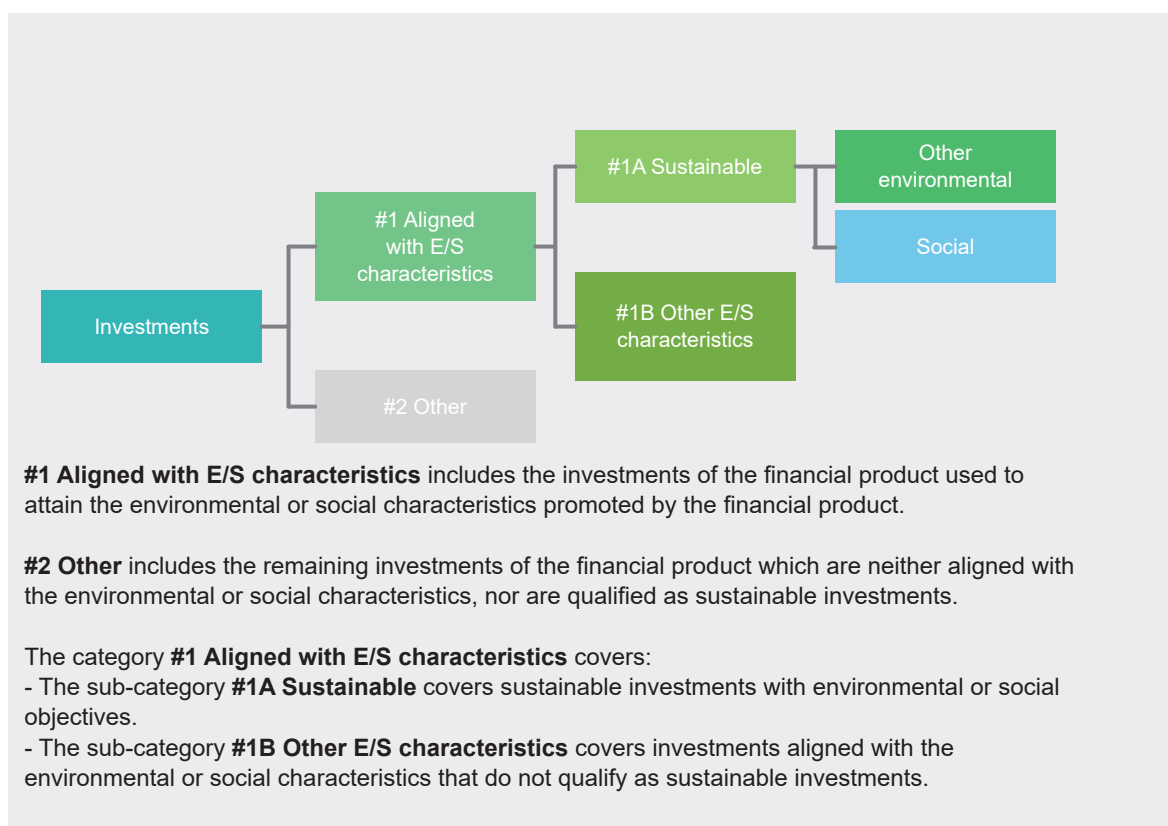

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested at least 86.88% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 61.79% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy was 58.38% and the minimum share of socially sustainable investments was 3.41%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

Up to 13.12% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete or which received a SDG score of "D" (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

## In which economic sectors were the investments made?

### DWS Invest SDG Corporate Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| C   | Manufacturing  | 6.1 %                    |

| M   | Professional, scientific and technical activities                    | 17.6 %                   |
| NA  | Other  | 9.5 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>23.8 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

#### Enabling activities

Directly enable other activities to make a substantial contribution to an environmental objective.

#### Transitional activities

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 58.38%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 65.67%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 3.41%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 65.67%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested up to 13.12% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete or which received a SDG score of “D” (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments did include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments were used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund pursued a strategy based on bonds as main investment strategy. At least 75% of the sub-fund's assets were invested globally in interest-bearing debt securities that had an investment grade status at the time of the acquisition. A maximum of 25% of the sub-fund's assets were invested into interest-bearing debt securities with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. The sub-fund manager aimed to hedge any currency risk versus the euro in the portfolio.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset was in general eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received a better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behaviour within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources and vulnerability to disasters; indicators for social aspects included the attitude to child labour, equality and prevailing social conditions; and indicators for good governance are, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

## **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as “not free” by Freedom House were excluded.

## **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): higher than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

## **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer was measured by dedicated scores, which were the result of DWS SDG investment assessment. Issuers were identified and scored essentially based on their positive and negative contribution to the UN SDGs. In addition, the methodology identified risk and adjusts SDG scores accordingly.

The sub-fund management considered in its allocation the resulting scores from the DWS SDG investment assessment and invested in issuers that were classified in the highest three scores (i.e., letter scores "A" - "C"). Issuers with a low SDG score (i.e., a letter score "E" or "F") were excluded as an investment.

### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of "F");
- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies that were directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

**DWS methodology for determining sustainable investments as defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment, which evaluated potential investments in relation to different criteria to conclude that an investment could be considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest SDG European Equities

**Legal entity identifier:** 254900DDS53YGYIDLG57

**ISIN:** LU2306834925

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>  |
|--|---|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy   |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy   |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective   |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) issuers exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics),
- (3) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest SDG European Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 3.76 % of assets  |
| Climate and Transition Risk Assessment B    |             | 20.72 % of assets |
| Climate and Transition Risk Assessment C    |             | 49.54 % of assets |
| Climate and Transition Risk Assessment D    |             | 18.96 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 53.59 % of assets |
| ESG Quality Assessment B                    |             | 13.58 % of assets |
| ESG Quality Assessment C                    |             | 20.81 % of assets |
| ESG Quality Assessment D                    |             | 2.97 % of assets  |
| ESG Quality Assessment E                    |             | 0 % of assets     |

| Nuclear weapons F                           |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered the following principle adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversitysensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section “How were the indicators for adverse impacts on sustainability factors taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest SDG European Equities

| Indicators   | Description  | Performance            |
|--|--|------------------------|
| <b>Principal Adverse Impact</b>  |  |                        |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 0 tCO2e / million EUR  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 0 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 0 % of assets          |
| PAII - 07. Activities negatively affecting biodiversity sensitive areas                    | Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas | 0 % of assets          |
| PAII - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.  | 0 tonnes / million EUR |
| PAII - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average.   | 0 tonnes / million EUR |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets          |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets          |

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest SDG European Equities

| Largest investments            | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|--------------------------------|---|----------------------------------|----------------------|
| Informa                        | M - Professional, scientific and technical activities   | 2,6 %                            | United Kingdom       |
| Veolia Environnement           | N - Administrative and support service activities       | 2,4 %                            | France               |
| SAP                            | J - IT and Communication                                | 2,4 %                            | Germany              |
| AstraZeneca                    | M - Professional, scientific and technical activities   | 2,3 %                            | United Kingdom       |

| Terna Rete Elettrica Nazionale | D - Electricity, gas, steam and air conditioning supply | 2,0 %                            | Italy                |
| Deutsche Telekom Reg.          | J - Information und Kommunikation                       | 2,0 %                            | Germany              |
| Schneider Electric             | M - Professional, scientific and technical activities   | 2,0 %                            | France               |
| Reckitt Benckiser Group        | M - Professional, scientific and technical activities   | 1,9 %                            | United Kingdom       |
| Smurfit Kappa                  | C - Manufacturing                                       | 1,9%                             | Ireland              |
| Technogym                      | N/A - Other   | 1,9 %                            | Italy                |
| EssilorLuxottica               | C - Manufacturing                                       | 1,8 %                            | France               |
| OX2 (publ)                     | N/A - Other   | 1,7 %                            | Sweden               |
| Roche Holding Profitsh.        | M - Professional, scientific and technical activities   | 1,7 %                            | Switzerland          |

for the timeframe from January 1, 2023 until Oktober 24, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through October 24, 2023

What was the proportion of sustainability-related investments?

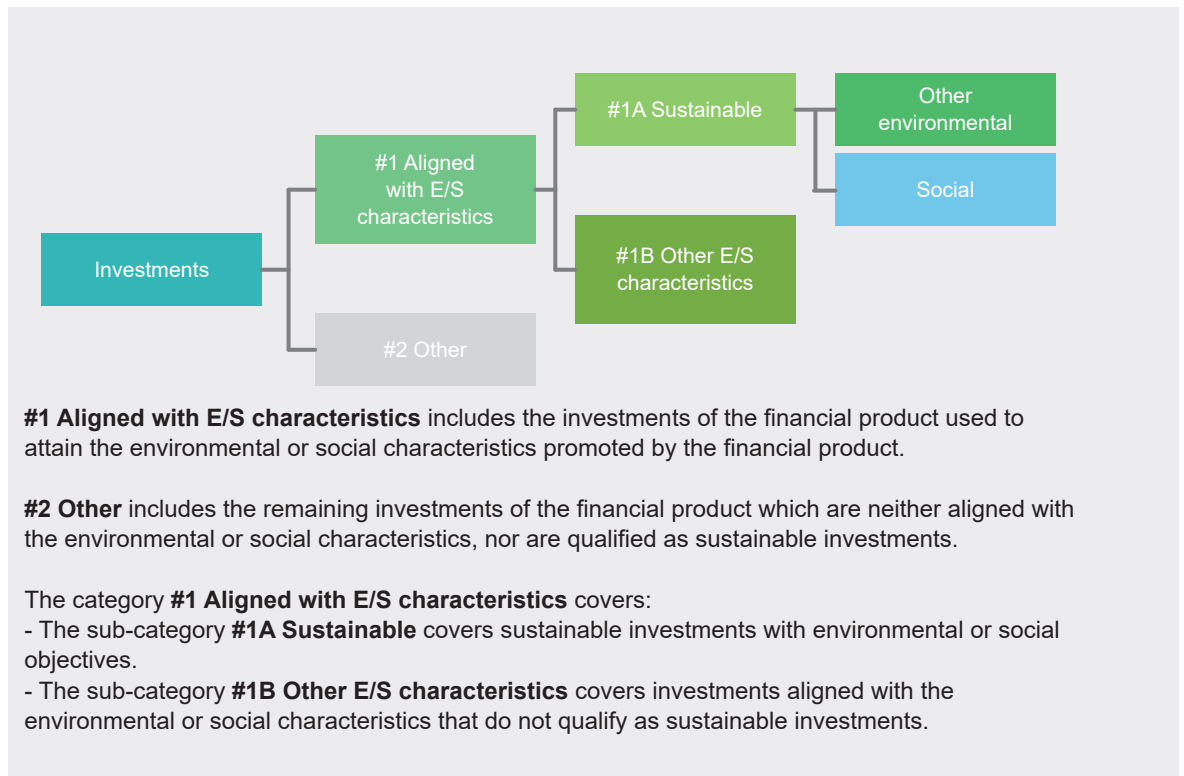

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.  
 Proportion of sustainability-related investments for the previous year: 92.98%

**Asset allocation** describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund was liquidated on October, 24 2023. On this date it invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 0% of the net assets of the sub-fund qualified as sustainable investments (#1A Sustainable).  
 The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 0% and the proportion of socially sustainable investments was 0%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

On the day of liquidation 100% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

In which economic sectors were the investments made?

DWS Invest SDG European Equities

Breakdown by sector / issuer

in % of portfolio volume

Bankbalance 100 %

Exposure to companies active in the fossil fuel sector 0 %

As of: October 24, 2023

This Sub-funds was liquidated on October 24, 2023. There were no assets in the portfolio as of the liquidation date. Therefore, no allocation of sectors could be made. Further information can be found in the asset overview in the annual report.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 52.53%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 52.53%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets were invested in equities of foreign and domestic issuers that operated in a business field included in the central themes favoured according to the market situation, profit from the selected trends or were active in an industrial sector that could directly or indirectly contribute to one of the UN SDGs. Up to 20% of the sub-fund's assets might be invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

### **ESG assessment methodology**

The portfolio management of this sub-fund sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success. This methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments (based on a defined assessment and classification methodology) to derive combined scores. The ESG database was therefore constituted by data and figures as well as on internal assessments that take into account factors beyond the processed data and figures, such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogues on ESG matters or corporate decisions. The ESG database derived "A" to "F" letter coded assessments within different categories as further detailed below. Within each category, issuers received one of six possible scores, with "A" being the highest score and "F" being the lowest score. If an issuer's score in one category was deemed insufficient, the portfolio management was prohibited from investing in that issuer, even if it was eligible according to other categories. For exclusion purposes, each letter score in a category was considered individually and could result in exclusion of an issuer. The ESG database used a variety of assessment categories to assess the attainment of the promoted environmental and social characteristics, including amongst others:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") were excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") were excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets.

#### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguishes between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group was composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison received a better score, while issuers rated worse in the comparison received a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluated a country's governance from a holistic perspective taking into account, among other things, the assessment of political and civil

liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of “E” or “F”) were excluded as an investment.

Further, issuers with a letter score of “D” in the DWS ESG Quality Assessment were limited to 15% of the sub-fund’s net assets.

• **Exposure to controversial sectors**

The ESG database defines certain business areas and business activities as relevant. Business areas and business activities were defined as relevant if they involve the production or distribution of products in a controversial area (“controversial sectors”). Controversial sectors were defined, for example, as the civil firearms industry, military defence, tobacco and adult entertainment. Other business sectors and business activities that affect the production or distribution of products in other sectors were defined as relevant. Other relevant sectors were, for example, nuclear energy or coal mining and coal-based power generation.

Issuers were evaluated according to the share of total revenues they generate in controversial business areas and controversial business activities. The lower the percentage of revenues from the controversial business areas and controversial business activities, the better the score. Issuers (excluding target funds) with a moderate, high or excessive exposure (i.e., a letter score of “D”, “E” or “F”) were excluded as an investment. As regards the involvement in coal mining and coal-based power generation, issuers (excluding target funds) with high or excessive exposure (i.e., a letter score of “E” or “F”) were excluded as an investment.

• **Involvement in controversial weapons**

The ESG database assessed a company’s involvement in the business of controversial weapons. Controversial weapons include for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons.

Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generate from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of “D”, “E” or “F”) were excluded as an investment.

• **DWS Use of Proceed Bond Assessment**

By way of derogation from the above, bonds that complied with DWS’ Use-of-proceeds bond assessment were investable also in cases where the bond issuer did not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds was assessed via a two-stage process.

In the first stage DWS assessed whether a bond qualified as a Use of Proceeds Bond. A key element was checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focused on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

If a bond complied with these principles, the second stage assessed the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social, and corporate governance factors. This assessment was based on the ESG assessment methodology as described above and excludes

- corporate issuers with poor ESG quality compared to their peer group (i.e. a letter score of “E” or “F”),
- sovereign issuers with high or excessive controversies regarding governance (i.e. a letter score of “E” or “F”),
- issuers with highest severity of norm issues (i.e. a letter score “F”), or
- issuers with excessive exposure to controversial weapons (i.e. a letter score of “D”, “E” or “F”).

To the extent that the sub-fund sought to attain the promoted environmental and social characteristics as well as corporate governance practiced by means of an investment in target funds, the latter did meet the DWS standards on Climate and Transition Risk-, Norm- and DWS ESG Quality Assessment (excluding the assessment of sovereigns) outlined above.

Derivatives were currently not used to attain the environmental or social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum share of assets complying with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlying complied with the ESG assessment methodology.

Ancillary liquid assets were not evaluated via the ESG assessment methodology.

• **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer have been measured by dedicated letter scores, which were the result of DWS SDG investment assessment. Issuers were identified and scored essentially based on their positive and negative contribution to the UN SDGs.

The sub-fund management considered in its allocation the resulting scores from the DWS SDG investment assessment. At least 80% of the sub-fund's net assets were invested in issuers that were classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further, issuers with a letter score of "D" in the DWS SDG investment assessment were limited to 15% of the sub-fund's net assets.

**Sustainability investment assessment methodology**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable. The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest SDG Global Equities

| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 52.88% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of (1) issuers exposed to excessive climate and transition risks, (2) companies with the worst DWS Norm Assessment (i.e. as regarded compliance with international standards of corporate governance, human rights and labour rights, customer and environmental safety and business ethics), (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact), (4) issuers scored among the worst in terms of environmental, social and governance risks compared to their peer group, (5) countries flagged as "not free" by Freedom House, (6) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or (7) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **UN Global Compact-Assessment** was used as indicator for whether a company was directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS SDG Investment Assessment** was used as indicator to measure the allocation to issuers contributing to the UN SDGs.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 52.88%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest SDG Global Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 4.35 % of assets  |
| Climate and Transition Risk Assessment B    |             | 28.75 % of assets |
| Climate and Transition Risk Assessment C    |             | 41.17 % of assets |
| Climate and Transition Risk Assessment D    |             | 24.88 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 56.63 % of assets |
| ESG Quality Assessment B                    |             | 20.27 % of assets |
| ESG Quality Assessment C                    |             | 15.71 % of assets |
| ESG Quality Assessment D                    |             | 6.33 % of assets  |
| ESG Quality Assessment E                    |             | 0 % of assets     |
| ESG Quality Assessment F                    |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment was considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the issuer followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment was sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investments were deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an investment with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the investment failed the DNSH assessment and was not considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## How did this financial product consider principal adverse impacts on sustainability factors?

Yes, the sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

Further information on principal adverse impacts on sustainability factors were provided in an annex to the sub-fund’s annual report.

## DWS Invest SDG Global Equities

| Indicators   | Description   | Performance               |
|--|---|---------------------------|
| <b>Principal Adverse Impact</b>  |   |                           |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.                                  | 382284.21 tCO2e           |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).             | 231.5 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.  | 567.9 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 20.05 % of assets         |
| PAII - 07. Activities negatively affecting biodiversity sensitive areas                    | Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas. | 0 % of assets             |
| PAII - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.   | 0 tonnes / million EUR    |
| PAII - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average.  | 0.36 tonnes / million EUR |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                       | 0 % of assets             |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).  | 0 % of assets             |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest SDG Global Equities

| Mowi                               | A - Agriculture, forestry and fishing                                   | 2.1 %                            | Norway               |
| Deutsche Managed Euro Fund Z-Class | K - Financial and insurance activities                                  | 2.0 %                            | Ireland              |
| Medtronic                          | Q - Human health and social work activities                             | 2.0 %                            | Ireland              |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.40% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.15%

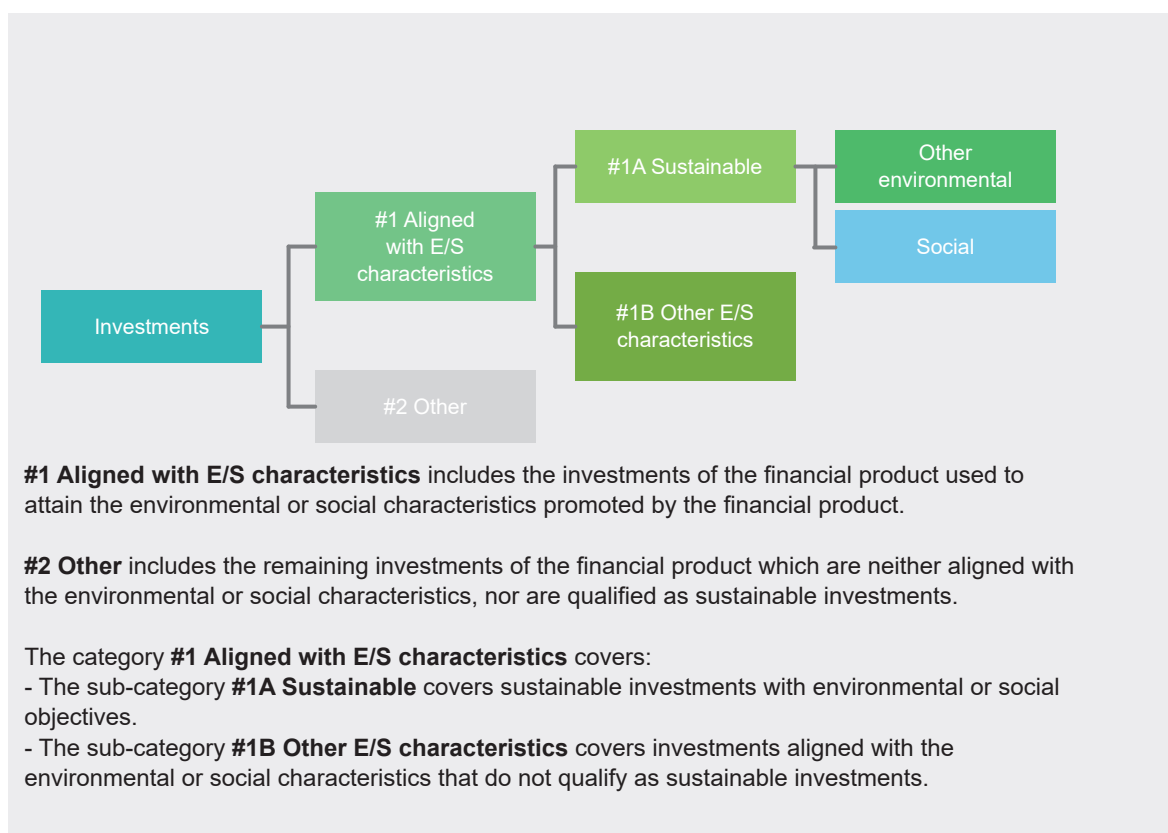

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested at least 94.40% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, at least 52.88% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy is 26.69% and the minimum share of socially sustainable investments was 26.19%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

Up to 5.6% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete or which received a SDG score of "D" (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

A more detailed description of the specific asset allocation of this sub-fund can be found in the Special Section of the Sales Prospectus.

#### In which economic sectors were the investments made?

#### DWS Invest SDG Global Equities

| NACE-Code | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|-----------|--|--------------------------|
| A         | Agriculture, forestry and fishing                                    | 2.2 %                    |
| C         | Manufacturing  | 31.8 %                   |

| Q   | Human health and social work activities           | 4.3 %                    |
| NA  | Other   | 2.3 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>20.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 26.69%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 51.31%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 26.19%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 51.31%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested up to 5.6% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied, for which ESG data coverage was incomplete or which received a SDG score of “D” (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments were used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets were invested in equities of foreign and domestic issuers that operated in a business field included in the central themes favoured according to the market situation, profit from the selected trends or were active in an industrial sector. Up to 20% of the sub-fund's assets were invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset was eligible in general according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behaviour within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources and vulnerability to disasters; indicators for social aspects included the attitude to child labour, equality and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

## **Freedom House status**

Freedom House is an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

## **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): higher than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

## **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

## **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer was measured by dedicated scores, which were the result of DWS SDG investment assessment. Issuers were identified and scored essentially based on their positive and negative contribution to the UN SDGs. In addition, the methodology identified risk and adjusted SDG scores accordingly.

The sub-fund management considered in its allocation the resulting scores from the DWS SDG investment assessment and invested in issuers that were classified in the highest three scores (i.e., letter scores "A" - "C"). Issuers with a low SDG score (i.e., a letter score "E" or "F") were excluded as an investment.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes: Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

#### **DWS methodology for determining sustainable investments as defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment, which evaluated potential investments in relation to different criteria to conclude that an investment was considered as sustainable as further detailed in section "What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?"

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Short Duration Credit

**Legal entity identifier:** 549300NH5FB8OOJT2J63

**ISIN:** LU0236145453

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 22.24% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 22.24%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Short Duration Credit

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 7.56 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 5.92 % of assets  |

| Nuclear weapons F                           | -           | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Short Duration Credit

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 22.57 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.93% of portfolio assets.

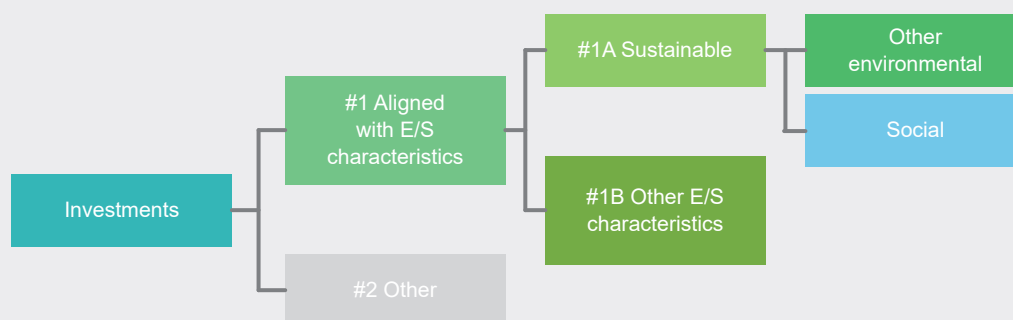

Proportion of sustainability-related investments for the previous year: 98.71%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 94.93% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 22.24% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 12.97% and the minimum share of socially sustainable investments was 9.27%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

5.07% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Short Duration Credit

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| NA  | Other  | 12.8 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>22.6 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 12.97%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 16.73%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 9.27%.

There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 16.73%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.07% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 80% of the sub-fund's assets were invested in equities of foreign and domestic issuers that operated in a business field included in the central themes favoured according to the market situation, or profit from the selected trends. Up to 20% of the sub-fund's assets were invested in short-term deposits, money market instruments and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as

measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

|  | <input checked="" type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Short Duration Income

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 1.09 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section “How were the indicators for adverse impacts on sustainability factors taken into account?”.

## DWS Invest Short Duration Income

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 12.43 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 92.76% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.16%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 92.76% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

7.24% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Short Duration Income

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 1.5 %                    |
| F   | Construction   | 0.6 %                    |
| G   | Wholesale and retail trade; repair of motor vehicles and motorcycles | 0.3 %                    |
| H   | Transporting and storage   | 2.2 %                    |
| J   | Information and communication  | 0.0 %                    |
| K   | Financial and insurance activities                                   | 28.2 %                   |

| NA  | Other  | 5.8 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>12.4 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

#### **Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not intend to make a allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 4.57%.

What was the share of socially sustainable investments?

The sub-fund did not intend to make a allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 4.57%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 7.24% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund pursued a strategy based on bonds as main investment strategy. The fund acquired interest-bearing securities, convertible bonds and warrant-linked bonds, participation and dividend right certificates, money markets instruments and liquid assets. At least 70% of the sub-fund's assets were invested in interest-bearing securities having maturities ranging between zero and three years. At least 25% of the sub-fund's assets were invested in assets that have a residual term to maturity that exceeds 24 months. No more than 25% of the sub-fund's assets were invested in convertible bonds and warrant-linked bonds; no more than 10% were invested in participation and dividend right certificates. The sub-fund's investments in asset backed securities and mortgage backed securities were limited to 20%. At least 90% of the sub-fund's assets were in EUR or hedged into EUR. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Sovereign Assessment**

The DWS Sovereign Assessment evaluated the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding political and civil liberties (i.e. a letter score of "E" or "F") were excluded as an investment.

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **Involvement in controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria is checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria are excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, the Freedom House status and with respect to investments in companies that are considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers might only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 20.59%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest StepIn Global Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 16.06 % of assets |
| Climate and Transition Risk Assessment B    |             | 15.54 % of assets |

| Cluster munitions D                         |             | 0 % of assets     |
| Cluster munitions E                         |             | 0 % of assets     |
| Cluster munitions F                         |             | 0 % of assets     |
| Depleted uranium weapons D                  |             | 0 % of assets     |
| Depleted uranium weapons E                  |             | 0 % of assets     |
| Depleted uranium weapons F                  |             | 0 % of assets     |
| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm ("DNSH") assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest StepIn Global Equities

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 15.24 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest StepIn Global Equities

| Largest investments                               | Breakdown by sector according to NACE Codes | in % of average portfolio volume | Breakdown by country |
|---|---|----------------------------------|----------------------|

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.

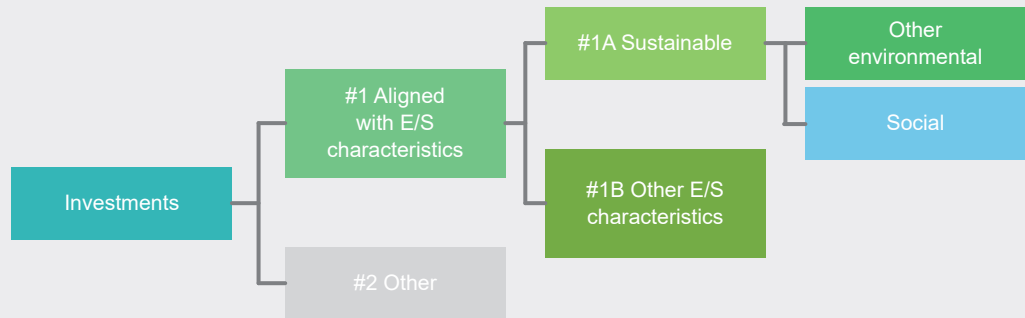

Proportion of sustainability-related investments for the previous year: 98.78%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 20.59% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 4.52% and the minimum share of socially sustainable investments was 16.07%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest StepIn Global Equities

| NACE-Code   | Breakdown by sector according to NACE Codes | in % of portfolio volume |
|---|---|--------------------------|
| K   | Financial and insurance activities          | 99.6 %                   |
| NA  | Other                                       | 0.4 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>15.2 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.52%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.33%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 16.07%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.33%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. The sub-fund invested in interest-bearing securities, convertible bonds, money-market instruments, bank balances, other low-risk assets, investment funds, equities, securities equivalent to equities and derivatives. At launch date 90% of the sub-fund's assets were invested in interest-bearing securities, convertible bonds, warrant-linked bonds, investment funds, money market instruments or liquid assets. Starting at launch date the sub-fund's assets have been shifted monthly step-by-step over a three-year period into instruments with higher yield and higher risk, i.e. mainly equities and equity related securities and its derivatives. After three years the percentage amount invested in those securities could have increased to a level of up to 100%.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Top Asia

**Legal entity identifier:** 549300PS13LX4PXITZ33

**ISIN:** LU0145648290

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 12.32% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/>   | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 12.32%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest StepIn Global Equities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest Top Asia

| Indicators   | Description   | Performance      |
|--|---|------------------|
| <b>Principal Adverse Impact</b>  |   |                  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 6.19 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets    |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets    |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Top Asia

| Largest investments                    | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 93.67% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 96.19%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.67% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 12.32% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 7.32% and the minimum share of socially sustainable investments was 5%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

6.33% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

| S   | Other services activities  | 0.2 %                    |
| NA  | Other  | 8.2 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>6.2 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 7.32%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 8.66%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 8.66%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 6.33% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities of companies having their registered offices or principal business activity in Asia (ex Japan). Up to 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, receive better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management

Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

#### **Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology. DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Top Dividend

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Top Dividend

| Indicators                                  | Description | Performance       |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Top Dividend

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 32.42 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 94.87% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 94.87% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

5.13% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>32.4 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |              |
|---------------------------------------|--------------|
| Taxonomy-aligned: Fossil gas          | 0.00%        |
| Taxonomy-aligned: Nuclear             | 0.00%        |
| Taxonomy-aligned (no gas and nuclear) | 0.00%        |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b> |
| Non Taxonomy-aligned                  | 100.00%      |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not intend to make a allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.43%.

#### What was the share of socially sustainable investments?

The sub-fund did not intend to make a allocation to environmentally or socially sustainable investments pursuant to Article 2(17) SFDR. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.43%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 5.13% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. At least 70% of the sub-fund's assets were invested in equities of international issuers that were expected to deliver an above-average dividend yield. When selecting equities, the following criteria was of decisive importance: dividend yield above the market average, sustainability of dividend yield and growth, historical and future earnings growth as well as price/earnings ratio.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets may have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

# Note on master-feeder structures

## DWS Invest ESG Dynamic Opportunities

The aggregated expenses for the MFC share class of the master fund and of the feeder fund amount to EUR 1 243 886.92 for the period from January 1, 2023, though November 21, 2023 (liquidation date of the master-feeder structure); this corresponds to a share of 0.51% of the average aggregated net assets of the master fund and of the feeder fund. The end of the fiscal year for both the master fund and the feeder fund is December 31, 2023.

### DWS Invest ESG Dynamic Opportunities

| 2023 expenses <sup>1</sup>          | DWS ESG Dynamic Opportunities <sup>2</sup><br>Class MFC (master fund) | DWS Invest ESG Dynamic Opportunities<br>(feeder fund) | Aggregated   |
|-------------------------------------|---|---|--------------|
| Share of average net assets<br>in % | 0.47%   | 0.54%   | 0.51%        |
| Absolute (in EUR)                   | 507 955.04  | 735 931.88  | 1 389 517.10 |

<sup>1</sup> These figures do not include income adjustment. Therefore, only limited comparability is possible with the relevant amounts in the corresponding expense items in the respective individual presentation of the statement of income and expenses for the master fund / feeder fund.

<sup>2</sup> DWS ESG Dynamic Opportunities is not approved for sale to non-qualified investors in Switzerland.

# General information

## Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's units. The net asset values per unit (= redemption prices), with the addition of intervening distributions, are used as the basis for calculating the value; in the case of domestic reinvesting funds, the domestic investment income tax – following any deduction of foreign withholding tax – plus solidarity surcharge charged to the fund are added. Performance is calculated in accordance with the "BVI method". Past performance is not a guide to future results.

The corresponding benchmarks – if available – are also presented in the report. All financial data

in this publication is **as of September 30, 2023** (unless otherwise stated).

## Sales prospectuses

The sole binding basis for a purchase is the current version of the sales prospectus, including the Terms and Conditions of Investment, and the key investor information document, which are available from DWS Investment GmbH or any branch of Deutsche Bank AG as well as from other paying agents.

## Information about the all-in fee

The all-in fee does not include the following expenses:

a) any costs that may arise in connection with the acquisition and disposal of assets;

b) any taxes that may arise in connection with administrative and custodial costs;  
c) the costs of asserting and enforcing the legal claims of the investment fund.

The details of the fee structure are set out in the current sales prospectus.

## Issue and redemption prices

Each exchange trading day on the Internet

## Second Shareholder Rights Directive (SRD II)

---

Based on the second Shareholder Rights Directive (SRD II), asset managers have to disclose certain information. Details on this are available on the DWS websites.

## Russia/Ukraine crisis

---

The conflict between Russia and Ukraine marked a dramatic turning point in Europe, which, among other things, is impacting on Europe's security architecture and energy policies in the long term and has caused considerable volatility. This volatility is likely to continue. However, the specific or possible medium-to-long-term effects of the crisis on the economy, individual markets and sectors, as well as the social implications, cannot be conclusively assessed due to the uncertainty at the time of preparing this report. The Asset Management Company of the investment fund is therefore continuing its efforts, within the framework of its risk management strategy, to assess these uncertainties and their possible impact on the activities, liquidity and performance of the investment fund. The Asset Management Company is taking all measures deemed appropriate to protect investor interests to the greatest possible extent.

# Annual report

# Annual report

## DWS Deutschland

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve sustainable appreciation relative to the benchmark (CDAX) in the medium to long term. To achieve this objective, the fund invests mainly in equities of German issuers, with an emphasis placed on a broad market investment in blue-chip stocks and in selected small- and mid-caps. The fund promotes environmental and social characteristics or a combination of these characteristics without pursuing an explicit ESG and/or sustainable investment strategy\*.

The equity fund DWS Deutschland recorded an appreciation of 30.0% per unit (LC unit class; BVI method) in the last twelve months through the end of September 2023, and thus outperformed its benchmark, which returned +26.1% (both percentages in euro terms).

### Investment policy in the reporting period

The portfolio management considered significant risks to be, in particular, the Russia-Ukraine war as well as the uncertainties regarding the future monetary policies of central banks, especially in view of considerably increased inflation rates on the one hand and signs of an emerging recession on the other.

The international capital markets experienced some turbulence in the reporting period. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, high inflation and the slowdown in economic

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: September 30, 2023

growth significantly dampened the mood in the markets. Increasing sanctions by Western countries against Russia and supply boycotts by Russia caused prices of energy (oil, gas, coal) and food to rise dramatically. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. In the past year through the end of September 2023, the central banks continued their interest rate increases. The U.S. Federal Reserve (Fed) raised its key interest rate again by 2.25 percentage points to a range of 5.25% p.a. – 5.50% p.a., and the European Central Bank (ECB) raised its key interest rate in eight steps from 1.25% p.a. to 4.50% p.a. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. Energy and producer prices fell slightly again as the reporting period went on. However – despite the recent easing of inflationary pressures – inflation

persisted at a high level overall at the end of September 2023, especially core inflation, which does not consider prices from the volatile energy and food sectors.

The international stock exchanges recorded price increases in the reporting period – although to varying degrees – especially in the industrial countries. For example, the U.S. equity markets (measured by the S&P 500) registered noticeable price gains overall. The U.S. exchanges received a boost from technology stocks, which benefited from growing interest in the topic of artificial intelligence. The equity markets in Germany and the euro area (measured by the DAX and the Euro Stoxx 50, respectively) rose even more strongly, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. The Japanese exchange, as measured by the TOPIX index, also posted significant price increases underpinned by the weakness of

the yen against the euro and the U.S. dollar. China's equity market, on the other hand, recorded only moderate growth overall following a period of price weakness. Market participants' growing hopes of a price recovery at the start of 2023 due to the relaxation of the Chinese government's 'zero-COVID' policy were dampened again as the year progressed through September 2023 by the problems in China's real estate market and the country's faltering economy.

The fund DWS Deutschland found itself in an investment climate initially dominated by a strong price rally that was fueled among other things by signs of an easing on the gas market and an economic downturn that was not as severe as feared. However, as the financial year progressed through the end of September 2023, the equity market moved sideways. On the whole, the fund participated to a disproportionate extent in the perceptible price increases on the stock market overall.

One of the instruments the portfolio management used for flexible management of leverage was financial derivatives in the form of DAX futures. This meant that the equity fund was overinvested at times, which allowed it to benefit to a greater extent from the significant price increases on the German stock exchange during the fourth quarter of 2022, for example. In addition, exposures in the basic materials sector were reduced in view of the structural challenges (higher energy prices). What is more, the portfolio management had weighted financials

more heavily, including banks, which benefited from the interest rate hikes, and insurance compa-

nies, which reported a positive earnings performance on the back of their strong pricing. All of this

largely explains why the fund DWS Deutschland performed better than its benchmark.

The equity investments in medical technology and pharmaceuticals had a somewhat dampening effect on performance. Despite the widespread uncertainty in the market, these more defensive sectors did not achieve the anticipated positive effect. Among the reasons for this were increased inventory reduction at end customers and investment restraint in China.

### Main sources of capital gains and losses

The main sources of capital gains and losses were realized gains on the sale of equities as well as on futures trading. However, they were countered – albeit to a much smaller extent – by realized losses from trade with options.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (“SFDR”).

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

\* Further details are set out in the current sales prospectus.

| <b>V. Realized net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>207 566 130.26</b> |
|--|------------|-----------------------|

|  |     |                |
|--|-----|----------------|
| 1. Net change in unrealized appreciation . . . . . | EUR | 307 010 459.62 |
| 2. Net change in unrealized depreciation . . . . . | EUR | 245 721 127.71 |

|   |            |                       |
|---|------------|-----------------------|
| <b>VI. Unrealized net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>552 731 587.33</b> |
|---|------------|-----------------------|

|   |            |                       |
|---|------------|-----------------------|
| <b>VII. Net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>760 297 717.59</b> |
|---|------------|-----------------------|

Note: The net change in unrealized appreciation (depreciation) is calculated by subtracting the total of all unrealized appreciation (depreciation) at the end of the fiscal year from the total of all unrealized appreciation (depreciation) at the beginning of the fiscal year. Total unrealized appreciation (depreciation) includes positive (negative) differences resulting from the comparison of the values recognized for the individual assets as of the reporting date with their respective acquisition costs.

Unrealized appreciation/depreciation is shown without income adjustment.

<sup>1</sup> Including any interest incurred from deposits.

| 1. Realized gains . . . . .           | EUR        | 976 026.58        |
| 2. Realized losses . . . . .          | EUR        | -470 200.99       |
| <b>Capital gains/losses . . . . .</b> | <b>EUR</b> | <b>505 825.59</b> |

|  |            |                   |
|--|------------|-------------------|
| <b>V. Realized net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>763 299.39</b> |
|--|------------|-------------------|

|  |     |              |
|--|-----|--------------|
| 1. Net change in unrealized appreciation . . . . . | EUR | 1 414 336.65 |
| 2. Net change in unrealized depreciation . . . . . | EUR | 1 095 259.52 |

|   |            |                     |
|---|------------|---------------------|
| <b>VI. Unrealized net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>2 509 596.17</b> |
|---|------------|---------------------|

|   |            |                     |
|---|------------|---------------------|
| <b>VII. Net gain/loss for the fiscal year . . . . .</b> | <b>EUR</b> | <b>3 272 895.56</b> |
|---|------------|---------------------|

Note: The net change in unrealized appreciation (depreciation) is calculated by subtracting the total of all unrealized appreciation (depreciation) at the end of the fiscal year from the total of all unrealized appreciation (depreciation) at the beginning of the fiscal year. Total unrealized appreciation (depreciation) includes positive (negative) differences resulting from the comparison of the values recognized for the individual assets as of the reporting date with their respective acquisition costs.

Unrealized appreciation/depreciation is shown without income adjustment.

<sup>1</sup> Including any interest incurred from deposits.

|--|------------|---------------------|
|  | <b>EUR</b> | <b>2 288 018.17</b> |
|--|------------|---------------------|

Note: The net change in unrealized appreciation (depreciation) is calculated by subtracting the total of all unrealized appreciation (depreciation) at the end of the fiscal year from the total of all unrealized appreciation (depreciation) at the beginning of the fiscal year. Total unrealized appreciation (depreciation) includes positive (negative) differences resulting from the comparison of the values recognized for the individual assets as of the reporting date with their respective acquisition costs.

Unrealized appreciation/depreciation is shown without income adjustment.

<sup>1</sup> Including any interest incurred from deposits.

## Notes to the financial statements (in accordance with article 7, no. 9, KARBV (Accounting and Valuation Regulation issued under the KAGB))

### Disclosures in accordance with the Derivatives Regulation

#### Underlying exposure obtained through derivatives:

EUR 64 457 362.90

#### Disclosures according to the qualified approach:

##### Composition of the reference portfolio (risk benchmark)

DAX CDAX Index

##### Market risk exposure (value-at-risk)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 85.678  |
| Highest market risk exposure | % | 133.870 |
| Average market risk exposure | % | 111.683 |

The values-at-risk were calculated for the period from October 1, 2022, through September 30, 2023, using the VaR method of historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the investment fund arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the qualified approach as defined by the Derivatives Regulation.

In the reporting period, the average leverage effect from the use of derivatives was 1.0, whereby the gross method was used for the calculation of leverage.

#### Income from securities loans, including costs and charges incurred directly and indirectly:

These items are listed in the statement of income and expenses.

#### Disclosure regarding asset valuation procedures:

The Depositary shall determine the value with the participation of the asset management company. The Depositary generally bases its valuation on external sources.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between the Depositary and the asset management company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Investments reported in this report are not valued at derived market values.

#### Disclosures on transparency and the total expense ratio:

The total expense ratio was:

Class LC 1.40% p.a.      Class FC 0.80% p.a.      Class IC 0.60% p.a.      Class LD 1.40% p.a.      Class TFC 0.80% p.a.      Class TFD 0.80% p.a.      Class GLC 1.40% p.a.  
Class GTFC 0.80% p.a.

The TER expresses total expenses and fees (excluding transaction costs) including any commitment fees as a percentage of the fund's average net assets for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class LC 0.001%      Class FC 0.001%      Class IC 0.001%      Class LD 0.001%      Class TFC 0.000%      Class TFD 0.001%      Class GLC 0.001%  
Class GTFC 0.001%

of the fund's average net assets.

to other parties (for printing and publication costs, auditing and other items).

In the fiscal year from October 1, 2022, through September 30, 2023, the asset management company, DWS Investment GmbH, was not reimbursed for the fees and expenses paid out of the investment undertaking DWS Deutschland to the Depository and other third parties, except in the form of financial information provided by brokers for research purposes.

Of its own portion of the all-in fee, the Company pays

|                         |                          |                        |                        |                         |                         |
|-------------------------|--------------------------|------------------------|------------------------|-------------------------|-------------------------|
| Class LC more than 10%  | Class FC less than 10%   | Class IC less than 10% | Class LD more than 10% | Class TFC less than 10% | Class TFD less than 10% |
| Class GLC more than 10% | Class GTFC less than 10% |                        |                        |                         |                         |

in commissions to distributors of the fund based on the balance of units distributed.

For investment fund units, the management fee / all-in fee rates in effect as of the reporting date for the investment funds held in the securities portfolio are shown in parentheses in the investment portfolio. A plus sign means that a performance-based fee may also be charged. As the fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Material other income and expenses are presented for each unit class in the statement of income and expenses.

The transaction costs paid in the reporting period amounted to EUR 886 136.23. The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted in the reporting period for the account of the investment fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 80 200.00.

## Remuneration Disclosure

DWS Investment GmbH (the “Company”) is a subsidiary in DWS Group GmbH & Co. KGaA (“DWS KGaA”), and is subject to the regulatory requirements of the Fifth Directive on Undertakings for Collective Investment in Transferable Securities (“UCITS V Directive”) and the Alternative Investment Fund Management Directive (“AIFM Directive”) as well as the European Securities and Markets Authority’s Guidelines on Sound Remuneration Policies (“ESMA Guidelines”) with regard to the design of its remuneration system.

### Remuneration Policy & Governance

The Company is governed by the Group-wide Compensation Policy that DWS KGaA has adopted for itself and all of its subsidiaries (“DWS Group” or only “Group”). In line with the Group structure, committees have been set up to ensure the appropriateness of the compensation system and compliance with regulatory requirements on compensation and are responsible for reviewing it.

As such the DWS Compensation Committee was tasked by the DWS KGaA Executive Board with developing and designing sustainable compensation principles, making recommendations on overall compensation and ensuring appropriate governance and oversight with regard to compensation and benefits for the Group.

Furthermore, the Remuneration Committee was established to support the Supervisory Board of DWS KGaA in monitoring the appropriate structure of the remuneration systems for all Group employees. This is done by testing the consistency of the remuneration strategy with the business and risk strategy and taking into account the effects of the remuneration system on the group-wide risk, capital and liquidity management.

The internal annual review at DWS Group level concluded the design of the remuneration system to be appropriate and no significant irregularities were recognized.

### Compensation structure

Employee compensation consists of fixed and variable compensation. Fixed compensation remunerates employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role.

Variable compensation takes into account performance at group, divisional and individual level. Variable compensation generally consists of two elements – the “Franchise Component” and the “Individual Component”. The Franchise Component is determined based upon the performance of three Key Performance Indicators (KPIs) at DWS Group level. For the performance year 2022 these were: Adjusted Cost Income Ratio (“CIR”), Net Flows and ESG metrics. The individual component of variable compensation takes into account a number of financial and non-financial factors, relativities within the peer group, and retention considerations. Variable compensation can be reduced accordingly or cancelled completely in the event of negative performance contributions or misconduct. In principle, it is only granted and paid out if the granting is affordable for the Group. Guaranteed variable compensation is not normally granted to employees. On an exceptional basis, guaranteed variable compensation can be granted to new hires but only during their first year of employment.

The compensation strategy is designed to achieve an appropriate balance between fixed and variable compensation. This helps to align employee compensation with the interests of customers, investors and shareholders, as well as to industry standards. At the same time, it ensures that fixed compensation represents a sufficiently high proportion of total compensation to allow the Group full flexibility in granting variable compensation.

### Determination of variable compensation and appropriate risk-adjustment

The total amount of variable compensation is subject to appropriate risk-adjustment measures which include ex-ante and ex-post risk adjustments. The robust methodology is designed to ensure that the determination of variable compensation reflects Group’s risk-adjusted performance as well as the capital and liquidity position. A number of considerations are used in assessing the performance of the business units. Performance is assessed in the context of financial and non-financial targets based on balanced scorecards. The allocation of variable compensation to the infrastructure areas and in particular to the control functions depends on the overall results of the Group, but not on the results of the business areas they oversee.

Principles for determining variable compensation apply at individual employee level which detail the factors and metrics that must be taken into account when making IVC decisions. These include, for instance, investment performance, client retention, culture considerations, and objective setting and performance assessment based on the “Total Performance” approach. Further-more, any control function inputs and disciplinary sanctions and their impact on the VC have to be considered as well.

### Sustainable Compensation

Sustainability and sustainability risks are an essential part that determine the variable compensation. Therefore, the remuneration policy is fully in line and consistent with sustainability risks. Hence, DWS Group incentivises behaviour that benefits both interest of clients and the long-term performance of the firm. Relevant sustainability factors are reviewed on a regular basis and incorporated in the design of the compensation system.

### Compensation for 2022

The DWS Compensation Committee has monitored the affordability of VC for 2022 and determined that the Group’s capital and liquidity levels remain above regulatory minimum requirements, and internal risk appetite threshold. As part of the overall 2022 variable compensation granted in March 2023, the Franchise Component is awarded to eligible employees in line with the assessment of the defined KPIs. The Executive Board recognizing the considerable contribution of employees and determined a target achievement rate of 76.25% for 2022.

## Identification of Material Risk Takers

In accordance with the regulatory requirements, the Company has identified Material Risk Takers. The identification process was carried out in accordance with the Group's policies and is based on an assessment of the impact of the following categories of staff on the risk profile of the Company or on a fund it manages: (a) Board Members/Senior Management, (b) Portfolio/Investment managers, (c) Control Functions, (d) Staff heading Administration, Marketing and Human Resources, (e) other individuals (Risk Takers) in a significant position of influence, (f) other employees in the same remuneration bracket as other Risk Takers, whose roles have an impact on the risk profile of the Company or the Group.

At least 40% of the VC for Material Risk Takers is deferred. Additionally, at least 50% of both, the upfront and the deferred proportion, are granted in the Group share-based instruments or fund-linked instruments for Key Investment Professionals. All deferred components are subject to a number of performance conditions and forfeiture provisions which ensure an appropriate ex-post risk adjustment. In case the VC is lower than EUR 50,000, the Material Risk Takers receive their entire variable compensation in cash without any deferral.

## Aggregate Compensation Information for the Company for 2022<sup>1</sup>

|   |                 |
|---|-----------------|
| Number of employees on an annual average              | 482             |
| Total Compensation                                    | EUR 101,532,202 |
| Fixed Pay   | EUR 63,520,827  |
| Variable Compensation                                 | EUR 38,011,375  |
| Thereof: Carried Interest                             | EUR 0           |
| Total Compensation for Senior Management <sup>2</sup> | EUR 5,846,404   |
| Total Compensation for other Material Risk Takers     | EUR 7,866,362   |
| Total Compensation for Control Function employees     | EUR 2,336,711   |

<sup>1</sup> In cases where portfolio or risk management activities have been delegated by the Company, the compensation data for delegates are not included in the table.

<sup>2</sup> Senior Management refers to the members of the Management Board of the Company, only. Members of the Management Board meet the definition of managers. Apart from the members of Senior Management, no further managers have been identified.

| Bonds           | - | - | - |
| Equities        | - | - | - |
| Other           | - | - | - |

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund/sub-fund.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Deutschland

**Legal entity identifier:** 549300D7LVT8E5OULG98

**ISIN:** DE0008490962

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>  |

| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective   |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Through this fund, the Company promoted environmental and social characteristics in the areas of climate action, social norms, and governance, as well as in relation to a country's political freedoms and civil liberties, while considering the following exclusion criteria:

- (1) Climate and transition risks;
- (2) Norm issues with respect to compliance with international norms for governance, human rights, labor rights, customer safety, environmental safety, and business ethics;
- (3) Countries rated as "not free" by Freedom House;
- (4) Controversial sectors for companies that exceeded a predefined revenue limit;
- (5) Controversial weapons.

Through this fund, the Company also promoted a minimum proportion of sustainable investments that made a positive contribution to one or more United Nations Sustainable Development Goals (UN SDGs).

For this fund, the Company had not designated a reference benchmark for the attainment of the promoted environmental and/or social characteristics.

How did the sustainability indicators perform?

Please see the section entitled "What actions have been taken to meet the environmental and/or social characteristics during the reference period?" for detailed descriptions of the binding elements of the investment strategy used to select the investments for attaining the environmental and/or social characteristics promoted and the assessment methodology for determining whether and to what extent assets and indicators met the defined ESG standards. Furthermore, please note that the section referenced contains more detailed information on the exclusion criteria of the sustainability indicators. This information must be read in connection with the performance of the sustainability indicators shown below.

The assessment market values from the front office system were used for the calculation of the ESG key indicators for the assets, and therefore minor deviations to the other market values that appeared in the annual report, which were derived from the fund accounting system, may occur.

| Indicators  | Description  | Performance                         |
|---|--|-------------------------------------|
| <b>Sustainability Indicators</b>                    |  |                                     |
| Climate and Transition Risk Assessment              | Indicator for the extent to which an issuer is exposed to climate and transition risks   | No investments in suboptimal assets |
| Norm Assessment                                     | Indicator for the extent to which norm issues constituting breaches of international standards arise at a company  | No investments in suboptimal assets |
| Freedom House status                                | Indicator of a country's political freedoms and civil liberties  | No investments in suboptimal assets |
| Exclusion Assessment for controversial sectors      | Indicator for determining the extent of a company's exposure to controversial sectors  | 0% of assets                        |
| Exclusion Assessment for controversial weapons      | Indicator for determining the extent of a company's exposure to controversial weapons  | 0% of assets                        |
| Methodology for determining sustainable investments | The methodology for determining sustainable investments as defined in article 2 (17) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (SFDR) is used as an indicator for measuring the proportion of sustainable investments (Sustainability Investment Assessment) | 18,74 % of assets                   |

#### Principal Adverse Impact

|  |   |                                       |
|--|---|---------------------------------------|
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  |                                       |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 18,18,35 % of assets<br>0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets                         |

As of: September 29, 2023

The Principal Adverse Impact Indicators (PAII) are calculated on the basis of information available within DWS back-office and front-office systems, that are amongst others based on information sourced from external ESG data vendors. In case individual securities or issuers related to such securities do not have information related to an individual PAII, either through a lack of data availability or through the non-applicability of the PAII to that individual issuer or security, the PAII calculation methodology for individual indicators may consider such securities or issuers with a value of 0. For Target Fund investments, a "look-through" into target fund holdings is performed subject to data availability, amongst others related to reasonable actual information of target fund holdings as well as the related security or issuer information. The calculation methodology for the individual PAII indicators may change in subsequent reporting periods as a consequence of evolving market standards, a change of treatment of securities of specific instrument types (such as derivatives), an increase in data coverage or through regulatory clarifications.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

For the fund, the Company invested a portion of the assets in sustainable investments as defined in article 2 (17) of the SFDR. These sustainable investments contributed to at least one of the United Nations Sustainable Development Goals (UN SDGs), which have environmental and/or social objectives such as the following (non-exhaustive) list:

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to the individual UN SDGs varied depending on the actual investments in the portfolio. The Company determined the contribution to the UN SDGs on the basis of its Sustainability Investment Assessment, in which various criteria were used to assess the potential investments with regard to whether they can be classified as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer significantly harmed these goals (“Do No Significant Harm” – DNSH assessment) and (3) the enterprise applied good governance practices.

The Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments (based on a defined assessment and classification methodology) to determine whether an investment was sustainable. Activities that made a positive contribution to the UN SDGs were assessed based on turnover, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the investment. Where a contribution is determined to be positive, the investment was deemed sustainable if the issuer passed the DNSH assessment and the enterprise applied good governance practices.

The share of sustainable investments as defined by article 2 (17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualify as sustainable. Notwithstanding the preceding, use-of-proceeds bonds that qualified as sustainable were counted towards the value of the entire bond.

With the fund the Company did not currently pursue a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Do No Significant Harm (DNSH) assessment was an integral part of the DWS Sustainability Investment Assessment and assessed whether an issuer that contributed to a UN SDG significantly harmed one or more of these goals. Where significant harm was identified, the issuer did not pass the DNSH assessment and the investment could therefore not be deemed sustainable.

## How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the Sustainability Investment Assessment, a DNSH assessment systematically integrated the mandatory indicators for the principal adverse impacts on sustainability factors from Table 1 (by relevance) and relevant indicators from Tables 2 and 3 in Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Disclosure Regulation. Taking these adverse impacts into account, the Company had set quantitative thresholds and/or defined qualitative values to determine whether an issuer significantly harmed the environmental or social objectives. These values were defined based on various external and internal factors, such as data availability, policy objectives, or market trends, and could be adjusted over time.

## Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of the Sustainability Investment Assessment, the Company also assessed, on the basis of the Norm Assessment, the extent to which an enterprise met international standards. This entailed tests of compliance with international standards such as the OECD Guidelines for multinational enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact, and the standards of the International Labour Organisation. Companies with the lowest Norm Assessment (i.e., a letter score of "F") did not qualify as sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

## How did this financial product consider principal adverse impacts on sustainability factors?

For the fund, the Company considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of the UNGC principles and the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons) (no. 14).

The principal adverse impacts listed above were considered at the product level through the application of the ESG assessment methodology or the exclusion of investments of fund that met the environmental and social characteristics promoted, as described in more detail in the section entitled "What actions have been taken to meet the environmental and/or social characteristics during the reference period? ".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## What were the top investments of this financial product?

| Volkswagen Pref.                                   | C - Manufacturing                                     | 2.4 %                            | Germany              |
| BMW Ord.   | C - Manufacturing                                     | 2.4 %                            | Germany              |
| Merck  | C - Manufacturing                                     | 2.0 %                            | Germany              |

for the period from October 01, 2022, through September 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from October 01, 2022, through September 30, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.63% of portfolio assets.

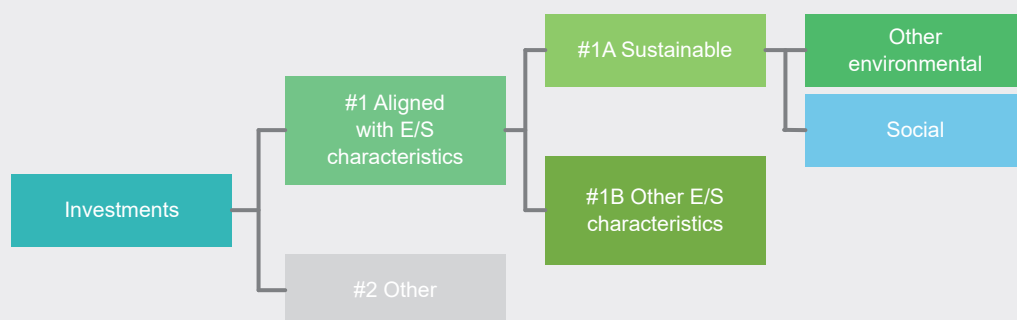

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This fund invested 99.63% of its assets in assets that met ESG standards defined by the Company (#1 Aligned with E/S characteristics). 18.74% of the fund's assets were invested in sustainable investments (#1A Sustainable).

0.37% of the fund's assets were invested in assets for which the ESG assessment methodology was not applied or for which ESG data coverage was not complete (#2 Other). Within this quota, investments of up to 40% of the fund's assets in investments for which there was not complete data coverage with respect to the ESG assessment categories and exclusions were tolerated. This tolerance did not apply to the Norm Assessment, so companies were required to apply good governance practices

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Deutschland

As of: September 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The Company did not pursue Taxonomy-aligned investments in the areas of fossil gas and/or nuclear energy. However, it is possible that, as part of the investment strategy, investments have been made in companies that were also active in these sectors.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned                      | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

There was no minimum share of investments in transitional or enabling activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

There was no separate minimum proportion for sustainable investments with an environmental objective that were not consistent with the EU Taxonomy. It was not possible to make a separation when assessing whether sustainable investments are environmental or social investments. The total share of sustainable investments was at least 18.74% of the assets of the fund.

What was the share of socially sustainable investments?

The Company had not defined a minimum percentage for environmentally or socially sustainable investments in accordance with article 2 (17) of the Disclosure Regulation. As a separation in the assessment of sustainable investments is not possible, the total share of environmentally and socially sustainable investments shall therefore amount to 18.74% of the fund's assets.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

0.37% of the fund’s assets, for which the DWS ESG assessment methodology was not applied or for which ESG data coverage was not complete, came under #2 Other. Within this quota, investments of up to 40% of the fund’s assets in investments for which there was not complete data coverage with respect to the ESG assessment categories and exclusions were tolerated. This tolerance did not apply to the Norm Assessment, so companies were required to apply good governance practices.

These other investments could have included all assets provided for in the investment policy, including bank balances and derivatives.

“Other investments” could have been used to optimize the investment performance, as well as for diversification, liquidity, and hedging purposes.

Minimum environmental or social safeguards were not considered or were only partially considered with respect to this fund’s other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This fund followed an equity strategy.

The fund's assets were primarily invested in assets that fulfilled the defined standards for the promoted environmental and social characteristics, as set out in the following sections. The strategy of the fund in relation to the promoted environmental or social characteristics was an integral part of the proprietary ESG assessment methodology and was continuously monitored through the investment guidelines of the fund.

Further details of the investment policy could be found in the special section of the Sales Prospectus and the Special Terms and Conditions of Investment.

#### **ESG assessment methodology**

The Company sought to attain the promoted environmental and social characteristics by assessing potential investments via a proprietary ESG assessment methodology irrespective of economic prospects of success and by applying exclusion criteria based on this.

The ESG assessment methodology was based on the ESG database, which used data from multiple ESG data providers, public sources and internal assessments. Internal assessments took into account factors such as an issuer's future expected ESG development, plausibility of the data with regard to past or future events, an issuer's willingness to engage in dialogue on ESG matters and an enterprise's ESG-specific decisions.

The ESG database derived "A" to "F" letter coded scores within different categories. Issuers each received one of six possible scores (A to F), with "A" being the highest score and "F" being the lowest score on the scale. On the basis of other categories, the ESG database also provided exclusion criteria (complete exclusions or exclusions based on turnover thresholds).

The respective scores for the assets were considered individually. If an issuer in an assessment category had a score that was considered to be unsuitable in that assessment category, assets from this issuer could not be acquired even if it has a score in another assessment category that would have been suitable.

The ESG database used, for example, the following categories to assess whether issuers/investments comply with ESG standards relating to the promoted environmental and social characteristics and whether companies that were invested in apply good governance practices:

#### **• Climate and Transition Risk Assessment**

The Climate and Transition Risk Assessment evaluated the behavior of issuers in relation to climate change and environmental changes, e.g., with respect to greenhouse gas reduction and water conservation.

Issuers that contributed less to climate change and other negative environmental changes or that were less exposed to such risks receive a better score.

Issuers that received a letter score of F in the Climate and Transition Risk Assessment category were excluded.

#### **• The Norm Assessment**

The Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts and business ethics. The assessment takes into account violations of the aforementioned international standards. These violations were assessed using data from ESG data providers and/or other available information, such as the expected future development of these violations as well as the willingness of the company to begin dialogue concerning relevant business decisions.

Companies that received a letter score of F in the Norm Assessment category were excluded.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedoms and civil liberties. On the basis of the Freedom House status, countries rated as "not free" by Freedom House were excluded.

#### **• The Exclusion Assessment for controversial sectors**

Companies that were involved in particular business areas and business activities in controversial areas ("controversial sectors") were excluded.

Companies were excluded as an investment based on the share of total revenues they generated in controversial sectors. The fund expressly excluded companies which generated revenues as follows:

- more than 10% from production of products and/or services provided in the armaments industry;
- more than 5% from production and/or sale of civil handguns or munition;
- more than 5% from production of tobacco products;
- more than 25% from coal mining and coal-based power generation;
- more than 5% from mining of oil sands.

Companies with coal expansion plans, such as additional coal mining, production or usage, were excluded based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to thermal coal, i.e., coal that is used in power stations to generate power. In the event of exceptional circumstances, such as measures imposed by a government to overcome challenges in the energy sector, the Company may decide to temporarily suspend applying the coal-related exclusions to individual companies/geographical regions.

#### • **The Exclusion Assessment for controversial weapons**

Companies that were identified as manufacturers – or manufacturers of key components – of anti-personnel mines, cluster munitions, chemical weapons, biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions were excluded. In addition, the relative exposures within a Group structure have been taken into consideration for the exclusions.

#### • **Assessment of use-of-proceeds bonds**

In a departure from the above assessment categories, investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. To begin with, the bonds were checked for compliance with the ICMA Green Bond Principles, Social Bond Principles or Sustainability Bond Guidelines. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers rated as “not free” by Freedom House;
- Companies with the lowest Norm Assessment (i.e., a letter score of “F”);
- Companies with involvement in controversial weapons production; or
- Companies with identified coal expansion plans.

#### • **Assessment of investment fund units**

Investment fund units were assessed taking into account the investments within the target funds in accordance with the Climate and Transition Risk Assessment, Norm Assessment, and Freedom House status, as well as in accordance with the Exclusion Assessment for the controversial weapons sector (excluding nuclear weapons, depleted uranium weapons or uranium munitions).

The assessment methods for investment fund units were based on examining the entire portfolio of the target fund, taking into account the investments within the target fund portfolio. Depending on the respective assessment category, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Thus, target funds may invest in investments that were not compliant with the defined ESG standards for issuers.

#### **Sustainability Investment Assessment in accordance with article 2 (17) SFDR**

In addition, the Company measured the contribution to one or more UN SDGs to determine the proportion of sustainable investments. This was carried out via the Sustainability Investment Assessment, with which potential investments were assessed on the basis of various criteria regarding whether an investment could be classed as sustainable, as described in more detail in the section entitled “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”.

#### **Assets not assessed in terms of ESG**

Not all of the fund’s investments were assessed using the ESG assessment methodology. This applied to the following assets in particular:

Bank balances were not assessed.

Derivatives were not used to attain the environmental and social characteristics promoted by the fund, which is why they were not taken into account in the calculation of the minimum proportion of assets that fulfill these characteristics. However, derivatives on individual issuers may have been acquired for the fund if, and only if, the issuers of the underlyings met the ESG standards and were not excluded in accordance with the ESG assessment categories described above.

The ESG investment strategy used did not provide for a mandatory minimum reduction.

Good governance was assessed with the Norm Assessment, as described in more detail in the section entitled "What actions have been taken to meet the environmental and/or social characteristics during the reference period? ". The assessed invested companies implemented good governance practices accordingly.

How did this financial product perform compared to the reference sustainable benchmark?

An index had not been defined as a benchmark.

**Reference**

**benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Frankfurt/Main, Germany, January 12, 2024

KPMG issued an unqualified auditor's report for the full annual report in accordance with article 102 of the German Investment Code. The translation of the auditor's report is as follows:

DWS Investment GmbH, Frankfurt/Main  
The Management

## Independent auditor's report

### To DWS Investment GmbH, Frankfurt/Main

#### Audit opinion

We have audited the annual report of the investment fund DWS Deutschland comprising the activity report for the fiscal year from October 1, 2022, through September 30, 2023, the statement of net assets and investment portfolio as of September 30, 2023, the statement of income and expenses, the distribution calculation, the statement of changes in net assets for the fiscal year from October 1, 2022, through September 30, 2023, as well as the comparative overview for the last three fiscal years, the statement of transactions concluded during the reporting period to the extent that they are no longer part of the investment portfolio, and the notes.

In our opinion, on the basis of the knowledge obtained in the audit, the accompanying annual report complies, in all material respects, with the provisions of the German Investment Code (KAGB) and the relevant European regulations and, in compliance with these requirements, gives a true and fair view of the financial position and performance of the investment fund.

#### Basis for the audit opinion

We conducted our audit of the annual report in accordance with article 102 KAGB and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer [Institute of Public Auditors in Germany] (IDW). Our responsibilities under those requirements and principles are further described in the "Auditor's responsibilities for the audit of the annual report" section of our auditor's report. We are independent of DWS Investment GmbH in accordance with the requirements of German commercial and professional law, and we have fulfilled our other German professional responsibilities in accordance with these requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinions on the annual report.

#### Responsibilities of the legal representatives for the annual report

The legal representatives of DWS Investment GmbH are responsible for the preparation of the annual report that complies, in all material respects, with the requirements of the German KAGB and the relevant European regulations, and that the annual report, in compliance with these requirements, gives a true and fair view of the investment fund. In addition, the legal representatives are responsible for such internal control as they have determined necessary to enable the preparation of an annual report that is free from material misstatement, whether due to fraud (i.e., fraudulent financial reporting and misappropriation of assets) or error.

When preparing the annual report, the legal representatives are responsible for including in the reporting events, decisions and factors that may have a material influence on the further development of the investment fund. This means, among other things, that when preparing the annual report, the legal representatives must assess the continuation of the investment fund by DWS Investment GmbH and have the responsibility for disclosing, as applicable, facts related to the continuation of the investment fund.

## Auditor's responsibilities for the audit of the annual report

Our objectives are to obtain reasonable assurance about whether the annual report as a whole is free from material misstatement, whether due to fraud or error, as well as to issue a report that includes our audit opinion on the annual report.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with article 102 KAGB and in compliance with German Generally Accepted Standards for Financial Statement Audits promulgated by the Institut der Wirtschaftsprüfer (IDW) will always detect a material misstatement. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of this annual report.

We exercise professional judgment and maintain professional skepticism throughout the audit.

We also

- Identify and assess the risks of material misstatement of the annual report, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our audit opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an audit opinion on the effectiveness of the internal control system of DWS Investment GmbH.
- Evaluate the appropriateness of the accounting policies used by the legal representatives of DWS Investment GmbH in preparing the annual report and the reasonableness of estimates made by the legal representatives and related disclosures.
- Conclude, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the continuation of the investment fund by DWS Investment GmbH. If we conclude that a material uncertainty exists, we are required to draw attention in the auditor's report to the related disclosures in the annual report or, if such disclosures are inadequate, to modify our respective opinions. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may result in the discontinuation of the investment fund by DWS Investment GmbH.
- Evaluate the overall presentation, structure and content of the annual report, including the disclosures, and whether the annual report presents the underlying transactions and events in a manner that the annual report gives a true and fair view of the financial position and performance of the investment fund in accordance with the requirements of the German KAGB and the relevant European regulations.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.
