**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 0.208 |
| Highest market risk exposure | % | 0.427 |
| Average market risk exposure | % | 0.301 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 136 871 163.10 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes

# DWS Invest ESG Floating Rate Notes

## Market abbreviations

### Contracting parties for derivatives (with the exception of forward currency transactions)

CIT = Citibank AG  
DB = Deutsche Bank AG Frankfurt

### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Citigroup Global Markets Europe AG, Deutsche Bank AG, Morgan Stanley Europe SE, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH, Toronto Dominion Bank and UBS AG.

## Exchange rates (indirect quotes)

As of December 29, 2023

|               |     |          |   |     |   |
|---------------|-----|----------|---|-----|---|
| Swiss franc   | CHF | 0.927777 | = | EUR | 1 |
| British pound | GBP | 0.869326 | = | EUR | 1 |
| U.S. dollar   | USD | 1.107000 | = | EUR | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

## Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

| Realized gains/losses . . . . .   | EUR        | 8 691 091.17         |
| <b>Capital gains/losses . . . . .</b>   | <b>EUR</b> | <b>8 691 091.17</b>  |
| <b>V. Net gain/loss for the fiscal year . . . . .</b>                               | <b>EUR</b> | <b>25 623 112.32</b> |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 50 415.20.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                           |
|-----------------------------|---------------------------|
| Class CHF ICH 0.13% p.a.,   | Class CHF RCH 0.15% p.a., |
| Class CHF TFCH 0.20% p.a.,  | Class FC 0.16% p.a.,      |
| Class IC 0.10% p.a.,        | Class LC 0.26% p.a.,      |
| Class LD 0.22% p.a.,        | Class TFC 0.16% p.a.,     |
| Class GBP CH RD 0.19% p.a., | Class GBP ICH 0.14% p.a., |
| Class GBP LCH 0.26% p.a.,   | Class USD ICH 0.13% p.a., |
| Class USD LCH 0.27% p.a.,   | Class USD TFCH 0.19% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 5.62% of all transactions. The total volume was EUR 818 904 053.93.

# Annual report

## DWS Invest ESG Global Corporate Bonds

### Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (Barclays Global Aggregate Corporate TR (EUR hedged)). To achieve this objective, the sub-fund primarily invests worldwide in corporate bonds denominated in euro or hedged against the euro that have an investment-grade rating at the time of acquisition. It may, however, also include corporate bonds that do not meet these requirements. The sub-fund's assets are also invested mainly in securities of domestic and international issuers highlighting environmental, social and corporate governance (ESG)\* factors.

The sub-fund DWS Invest ESG Global Corporate Bonds recorded an appreciation of 7.2% per share (FC share class; BVI method) in the last twelve months through the end of December 2023, and thus outperformed its benchmark, which returned +6.5% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive

in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In line with its investment policy, the sub-fund remained focused on corporate bonds and interest-bearing instruments of financial services providers. In terms of regional allocation, the portfolio management gave preference to issues from the U.S. and Europe. It also added a selection of corporate bonds from emerging markets to the portfolio denominated in either U.S. dollars or euro. Most of the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date.

In the first half of 2023, the average duration was shorter than the benchmark as, during this

time, the central banks were still increasing interest rates. In addition, the credit risk within the bond portfolio was higher than that of the benchmark overall. This helped the sub-fund DWS Invest ESG Global Corporate Bonds to outperform its benchmark in general.

## DWS Invest ESG Global Corporate Bonds

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
BBG Global Aggregate Corporate EUR Hedged Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 94.283  |
| Highest market risk exposure | % | 112.352 |
| Average market risk exposure | % | 102.886 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.9, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 173 211 796.43 as of the reporting date.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting parties for forward currency transactions

Deutsche Bank AG, Société Générale, State Street Bank International GmbH, The Bank of New York Mellon SA, Toronto Dominion Bank and UBS AG.

### Securities loans

The following securities were transferred under securities loans at the reporting date:

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year . . . . .</b>                            | <b>EUR</b> | <b>1 959 928.15</b>  |  |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 8 734.58.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                            |
|-----------------------------|----------------------------|
| Class CHF FCH10 0.53% p.a., | Class FC 0.69% p.a.,       |
| Class FD10 0.50% p.a.,      | Class ID 0.46% p.a.,       |
| Class LC 1.00% p.a.,        | Class TFC 0.70% p.a.,      |
| Class TFD 0.70% p.a.,       | Class XC 0.29% p.a.,       |
| Class XD 0.28% p.a.,        | Class USD FCH10 0.53% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                              |                             |
|------------------------------|-----------------------------|
| Class CHF FCH10 0.006% p.a., | Class FC 0.006% p.a.,       |
| Class FD10 0.005% p.a.,      | Class ID 0.006% p.a.,       |
| Class LC 0.006% p.a.,        | Class TFC 0.006% p.a.,      |
| Class TFD 0.006% p.a.,       | Class XC 0.005% p.a.,       |
| Class XD 0.006% p.a.,        | Class USD FCH10 0.006% p.a. |

of the average net asset value of the respective share class.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 3 237.67.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.79% of all transactions. The total volume was EUR 7 593 158.37.

## DWS Invest ESG Global Corporate Bonds

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value..

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Global Emerging Markets Equities

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation. To achieve this objective, the sub-fund invests primarily in equities of companies that have their registered offices in an emerging-market country or conduct their principal business activity in emerging-market countries, or which, as holding companies, predominantly hold interests in companies registered in emerging-market countries. A company is viewed as having its principal business activity in emerging-market countries if a significant part of its earnings or revenues is generated there. Emerging markets are countries listed in the MSCI Emerging Markets Index or listed in Standard & Poor's Emerging Market Database (EMDB). Furthermore, countries which are listed as low or middle income (including both lower middle and higher middle income) by the World Bank will be considered as Emerging Markets even if such countries are neither listed in the MSCI Emerging Markets Index nor in the EMDB but must not be included in the MSCI World Index. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.

The sub-fund recorded an appreciation of 4.9% per share (LC share class; BVI method; in euro) in the fiscal year through December 31, 2023.

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

In terms of its regional equity allocation, the sub-fund was weighted more strongly in Asia (in North Asia in particular) than in other emerging markets. The portfolio management took a constructive

view on this region due to its generally more stable fundamentals, such as structurally superior growth momentum, moderate valuations overall, higher currency reserves and lower levels of debt. The focus was on India, Taiwan, South Korea and selectively on China. While the positioning in South Korea was very positive, mainly due to the emphasis on semiconductors, the performance of Chinese equities proved to be very volatile. After the shift away from the zero-COVID policy, the Chinese equity market posted strong market price increases up to the beginning of 2023. However, these then turned in a disappointing performance through the end of December 2023. In India, bank stocks in particular were heavily weighted, while in Taiwan the emphasis was also on semiconductors.

Sentiment in China initially improved when the government began to lift COVID restrictions and reopen cities. At the same time, the Chinese government signaled support for the real estate sector, for example by drawing up a 16-point rescue plan that gave developers better access to bank loans and to the bond and equity markets. The tension between China and the United States continued, with the USA tightening restrictions on exports of semiconductor technology to China. The APAC market first peaked at the end of January as the COVID situation in China stabilized, before weakening again until the end of September. China ended the fiscal year in negative territory. Despite several economic policy measures such as key

interest rate cuts being taken, the macroeconomic data was weaker than expected. The exodus of money from the Chinese market continued throughout the year. Especially positions in the Chinese Internet and real estate sector were negatively impacted by the muted sentiment and recovery in real estate sales in China. South Korea and Taiwan closed in positive territory. In South Korea, investors were bullish on the supply chain for electric vehicles (EV). Companies benefited from the US Inflation Protection Act, which incentivized Korean companies to step up investment in the US while keeping Chinese competitors out of the US electric vehicle market. In Taiwan, investments in artificial intelligence fueled demand for servers and components. The IT positions in Korea and Taiwan generated above-average positive returns within the portfolio.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Emerging Markets Net EUR (EUR levels)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 85.235  |
| Highest market risk exposure ..... | % | 121.228 |
| Average market risk exposure ..... | % | 101.460 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 3 488.67 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                   |                           |
|-----------------------------------|---------------------------|
| Class FC 0.84% p.a.,              | Class LC 1.58% p.a.,      |
| Class LCH (P) 1.60% p.a.,         | Class LD 1.58% p.a.,      |
| Class MFC 0.44% p.a.,             | Class NC 2.08% p.a.,      |
| Class PFC 1.75% p.a.,             | Class TFC 0.84% p.a.,     |
| Class TFCH (P) 0.86% p.a.,        | Class TFD 0.79% p.a.,     |
| Class GBP FD50 0.58% p.a.,        | Class GBP TFD 0.83% p.a., |
| Class JPY FC 0.37% <sup>3</sup> , | Class USD FC 0.84% p.a.,  |
| Class USD FD50 0.56% p.a.,        | Class USD LC 1.58% p.a.,  |
| Class USD LD 1.59% p.a.,          | Class USD TFC 0.83% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>3</sup> Annualization has not been performed for share classes launched during the year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 057 324.38.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

2023

|  |            |                |                       |
|--|------------|----------------|-----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |            |                |                       |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

## DWS Invest ESG Global Emerging Markets Equities

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Healthy Living

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG Healthy Living is to generate long-term capital appreciation. To achieve this objective, at least 80% of net assets are invested in equity securities of companies in the health care and consumer health care sector.

The sub-fund's investments are intended to cover the entire spectrum of the health care industry from preventive medicine to the promotion of physical and mental health and the treatment of chronic illnesses. In order to be attributed to the health care or consumer health care sector, companies must generate a portion of their revenues in this field. The health care sector comprises the following segments: pharmaceuticals, biotechnology, medical technology, medical devices and medical consumer goods, health care services and technology, and managed care and life science systems. The life science systems segment in turn includes suppliers of products and solutions for biopharmaceutical research and production such as cell analysis and sample preparation as well as separation instruments, reagents, cell culture media, bioreactors, next-generation DNA sequencing applications, etc. The consumer health care sector includes companies specializing in products or services that promote or contribute to a healthy lifestyle, e.g., manufacturers/suppliers of healthy foodstuffs and good nutrition, athletic wear and operators of fitness studios. When selecting suitable

investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the reporting period from the start of January through the end of December 2023, DWS Invest ESG Healthy Living recorded an appreciation of 2.9% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic

slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year.

In terms of the performance of the different sectors in the reporting period, health care equities were laggards compared with other sectors, which turned in a strong performance overall. This is due, among other reasons, to investors moving away from more defensive sectors such as health care towards technology stocks in particular. Within the health care sector, there was also a big gap between a handful of stocks that recorded significant double-digit price increases and the rest, which were mostly down.

An assessment of the individual health care stock segments yielded a mixed picture. Particularly pharmaceutical companies focusing on drugs for treating obesity and diabetes saw significant price gains. Medical technology

companies also benefited from the normalization of the situation relative to the sector in the wake of COVID-19-related distortions in hospitals. Supply chain improvements likewise provided a boost to these companies. By contrast, biotechnology stocks in particular were negatively impacted by the sharp rise in interest rates, which greatly complicated financing for companies that were often still unprofitable. This likewise hurt biotechnology suppliers and equipment providers.

While the sub-fund underperformed the broader market on account of the factors described above, it outperformed the health care sector, mainly due to the positive contribution from consumer-oriented companies. Companies specializing in outdoor and fitness products in particular made a positive contribution. The selection of suppliers of healthier foods and food ingredients also underpinned the positive trend, compensating for the relative weakness of health care securities and bolstering the sub-fund's appreciation.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Tax-

onomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Health Care Gross Index (in EUR)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 70.605  |
| Highest market risk exposure ..... | % | 108.298 |
| Average market risk exposure ..... | % | 94.286  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>Capital gains/losses</b> .....   | <b>EUR</b> | <b>-200 205.30</b> |             |
| <b>V. Net gain/loss for the fiscal year</b> .....                               | <b>EUR</b> | <b>-122 364.80</b> |             |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                      |
|-----------------------|----------------------|
| Class FC 0.92% p.a.,  | Class FD 0.91% p.a., |
| Class LC 1.77% p.a.,  | Class LD 1.77% p.a., |
| Class TFC 0.91% p.a., | Class XC 0.45% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 3 705.23.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest ESG Mobility

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average capital appreciation. To this end, the sub-fund invests primarily in equities, share certificates, equity warrant-linked bonds whose underlying warrants are on securities, participation and dividend-right certificates, and equity warrants from issuers whose main field of business is “mobility” or which benefit from mobility. The term “mobility” encompasses various aspects and facets of mobility. In addition to conventional applications such as transport and logistics, it also comprises the changing patterns of accessibility and their impact on lifestyle habits and the world of work. The companies concerned are part of the multi-stage value chain in the mobility sector. They include companies and their suppliers in the transport, logistics and clean energy sectors, autonomous driving, hydrogen applications, battery technologies, cloud computing, real estate, consumer discretionary, IT, online platforms, food delivery service, and sports and lifestyle vehicles. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.

In the fiscal year through the end of December 2023, the sub-fund recorded an appreciation of 24.1% per share (LC share class; in euro; BVI method).

### DWS Invest ESG Mobility

<sup>1</sup> Launched on May 16, 2022

“BVI method” performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the

S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China’s equity markets even closing with perceptible losses.

In its stock selection, the sub-fund management considered all aspects and nuances of mobility. Spatial mobility: Change in trends in the work environment and leisure time activities, therefore of importance in the way real estate and goods are used. Movement: Traditional means of transport like cars, planes and trains, and new

innovations like battery technology, hydrogen and autonomous driving. Lifestyle: Consideration of changing accessibility and its effects on lifestyle, e.g., smart watches, fitness trackers, online shopping and outdoor activities. As part of the investment process with fundamental stock selection, assessment, portfolio design and, not least, monitoring/risk management, the portfolio was broadly positioned. In the spatial mobility segment, the sub-fund invested in securities from the work environment, travel and accommodation areas etc. In the movement segment, it invested in areas like transport and logistics, electric vehicles and charging technology. In the lifestyle segment, the focus was on smart devices and navigation/tracking. The preferred company characteristics included, in particular, strong balance sheets, large market share or growth potential, high-quality governance, stockholder orientation, high cash flow generation, a cost or technology advantage, scalability & sustainability of the business model and pricing power.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Tax-

onomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 92.044  |
| Highest market risk exposure | % | 136.962 |
| Average market risk exposure | % | 115.113 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                      |                      |
|----------------------|----------------------|
| Class FC 0.91% p.a., | Class FD 0.92% p.a., |
| Class LC 1.77% p.a., | Class LD 1.78% p.a., |
| Class XC 0.46% p.a.  |                      |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1283.86.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Multi Asset Defensive (in liquidation)

(Merger into DWS Invest ESG Multi Asset Income as per November 21, 2023)

### Investment objective and performance in the reporting period

The objective of the investment policy was to achieve a positive investment performance in the medium to long term while taking the opportunities and risks of the international capital markets into account. To achieve this, the sub-fund invested in interest-bearing securities, certificates such as bond or index certificates, convertible bonds, warrant-linked bonds whose underlying warrants were on securities, and participation and dividend-right certificates. The defensive nature of the strategy resulted from an overweighting of fixed rate investments and a restriction of equity investments. Aspects considered when selecting investments included a focus on environmental, social and corporate governance (ESG) criteria. These aspects were an integral component of the investment strategy.

In the reporting period from January 1, 2023, through to its merger on November 21, 2023, the sub-fund recorded an appreciation of 2.2% per share (LD share class; BVI method; in euro term).

### Investment policy in the reporting period

With regard to bond investments, the sub-fund DWS Invest ESG Multi Asset Defensive (in liquidation) was internationally positioned in the reporting period. The investment focus was on euro-denominated bonds. In terms of issuers, the portfolio management invested heavily in corporate bonds. In addition, it also invested in high-yield bonds and govern-

ment bonds from the industrial countries. The equity side maintained a global orientation and was also broadly diversified. In terms of its sector allocation, the sub-fund was generally broadly positioned, with the health care and financial sectors strongly weighted. The management's investment focus was on European and U.S. equities.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However,

inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging

markets, with China's equity markets even closing with perceptible losses.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The sub-fund management accompanied this performance in the capital markets using derivatives against rising interest rates and hedging against price declines in the equity markets. This meant that price declines could be mitigated overall. In the second half of 2023, hedges against rising interest rates were gradually removed, which meant that the drop in interest rates toward the end of 2023 was reflected positively in the performance for the year. Interest rate premiums for corporate bonds also decreased and resulted in a significant positive contribution to the performance overall. The partially hedged U.S. dollar exposure helped to mitigate the weakness of the U.S. dollar somewhat.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
65% iBoxx Euro Overall Index, 35% MSCI World High Dividend Yield

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 0.000  |
| Highest market risk exposure | % | 68.593 |
| Average market risk exposure | % | 55.180 |

The values-at-risk were calculated for the period from November 21, 2023, through December 12, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 5 738 623.22 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                               |
|--------------------------------|-------------------------------|
| Class LC 1.16% <sup>2</sup> ,  | Class LD 1.16% <sup>2</sup> , |
| Class NC 1.36% <sup>2</sup> ,  | Class ND 1.36% <sup>2</sup> , |
| Class PFD 0.96% <sup>2</sup> , | Class TFC 0.61% <sup>2</sup>  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>2</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 387.31.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.70% of all transactions. The total volume was EUR 925 673.83.

## DWS Invest ESG Multi Asset Defensive (in liquidation)

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Multi Asset Income

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG Multi Asset Income is to achieve a positive investment performance in the medium to long term while taking the opportunities and risks of the international capital markets into account. To achieve this objective, the sub-fund invests worldwide, particularly in equities, bonds, certificates and funds. The investment focus of the sub-fund is generally on income-oriented assets such as interest-bearing securities and equities. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\* The investment policy is also implemented through the use of suitable derivatives. In its investments, the fund management actively and flexibly managed the weighting of the individual asset classes. DWS Invest ESG Multi Asset Income recorded an appreciation of 3.4% per share (LD share class; BVI method; in euro) in the twelve months through the end of December 2023.

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and

<sup>1</sup> Class TFC launched on November 21, 2023

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as

measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses. On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in par-

particular posted significant returns as their risk premiums narrowed significantly. Given these circumstances, the overall performance of the sub-fund's investments was positive in the reporting period.

Within the equity portfolio, the sub-fund management invested globally with an orientation to the United States and Europe, placing its focus on high-dividend stocks.

On the bond side, the management retained its focus on the solid corporate bonds of the developed countries with an investment-grade rating (BBB- and better from the leading rating agencies), which offered yield spread benefits compared to government bonds.

### Composition of the reference portfolio (according to CSSF circular 11/512)

55% MSCI All Country World Net TR Index - in EUR, 35% BBG High Yield 2% Issuer Capped Index EUR Hedged, 10% JP Morgan GBI-EM Global Diversified Index - in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 55.167 |
| Highest market risk exposure ..... | % | 78.731 |
| Average market risk exposure ..... | % | 67.086 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.8, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 87 137 421.16 as of the reporting date.

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

| <b>IV. Sale transactions</b>  |                          |
| Realized gains/losses . . . . .   | EUR 507 572.03           |
| <b>Capital gains/losses . . . . .</b>   | <b>EUR 507 572.03</b>    |
| <b>V. Net gain/loss for the fiscal year . . . . .</b>                               | <b>EUR 2 616 283.88</b>  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                                |
|-----------------------|--------------------------------|
| Class FC 0.71% p.a.,  | Class LC 1.30% p.a.,           |
| Class LD 1.31% p.a.,  | Class LDH (P) 1.34% p.a.,      |
| Class NC 1.59% p.a.,  | Class ND 1.60% p.a.,           |
| Class PFD 0.93% p.a., | Class TFC 0.07% <sup>5</sup> , |
| Class TFD 0.72% p.a.  |                                |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>5</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 31 377.24.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

|   | Class TFD     | EUR            | 104.61 |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.21% of all transactions. The total volume was EUR 2 454 235.88.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG Next Generation Infrastructure

### Investment objective and performance in the reporting period

The sub-fund invests in infrastructure segments that have undergone key architectural changes and thus represent a new generation of assets. These assets are closely related to structural growth trends such as digitalization and decarbonization and will come to influence and determine everyday life significantly in the near future. The sub-fund groups its investments around changing consumption patterns and demand for “smart” – and also sustainable – solutions based on technological progress (smart cities, smart homes, smart buildings, etc.). The sub-fund invests mainly in equities of global issuers which show high environmental, social and corporate governance (ESG) performance beyond their financial success. The ESG performance of a company is its application of recognized environmental, social standards and good corporate governance, which is evaluated separately from financial success. Aspects considered when selecting investments include a focus on environmental, social and corporate governance (ESG) standards. These aspects are an integral component of the investment strategy.\*

In the reporting period from January 1, 2023, through December 31 2023, the sub-fund recorded a decline of 2.5% per share (LC share class; BVI method; in euro).

As of: December 31, 2023

nominal returns for the fiscal year ending December 31 2023.

Put simply, most asset classes outperformed expectations for the reporting year, given that the United States (and other regions of the world) were widely expected to enter recession. Still, 2023 was a volatile year for riskier assets. Global equities posted solid gains, largely thanks to strong advances by a number of tech stocks through the end of the year. Central banks were mostly tightening, but then appeared to be loosening the reins a little toward the end of the year. Longer-term interest rates generally headed higher in both real and nominal terms, causing some damage in the process, but they began to relent in the final two months of the year. The U.S. survived a short-lived banking crisis, a debt ceiling standoff, and

intense political bickering on how to draft a budget. The expected economic recovery in China did not materialize despite several fiscal support measures. In fact, the economy actually contracted in some areas. The Russia-Ukraine conflict persisted without either side gaining any real advantages. The conflict in the Middle East flared up again later in the year.

The sub-fund recorded a moderate decline and underperformed compared with the broader equity market, as measured by the MSCI World Index, as the environment during the reporting year was predominantly characterized by higher interest rates. These higher interest rates weighed on some of the more rate-sensitive infrastructure sub-sectors, including equities from communication and utilities. Clean energy stocks per-

formed particularly poorly as cost increases in areas such as offshore wind-power projects in the United States led to delays, asset impairments and some cancellations. This was partially offset by solid gains in the more cyclical transport sub-sector. E-commerce real estate and data centers were also bright spots in the reporting year.

For the period ending December 31, 2023, the sub-fund's performance was negative. From a contribution-to-return perspective, the largest positive contributions came from transportation, e-commerce real estate and data management. The transportation sector got off to a strong start in the year, helped by improved global sentiment and solid transportation trends. The broader upswing in the markets and generally better-than-expected economic growth are also likely to have had a supportive effect. One of the top performers was Ferrovial, whose important concessions business is doing well. E-commerce real estate benefited from positive contributions from Australian-listed Goodman Group and UK-listed Segro PLC. Data management, and especially data centers, also made a solid contribution to performance in the reporting year. Industry-wide demand in the data center segment reached an all-time high, and the AI trend is driving the next growth cycle. At the other end, the smart grid and renewable energy sub-sectors felt the impact of higher interest rates in the reporting period, with a corresponding negative impact on investment performance. NextEra Energy Partners LP was an especially poor performer in smart

### DWS Invest ESG Next Generation Infrastructure

Last price of the share class (in USD)

| Share class  | ISIN         | Last price per share <sup>1</sup> |
|--------------|--------------|-----------------------------------|
| Class USD XC | LU2162005198 | 114.69                            |

<sup>1</sup> Due to redemption of all shares by investors on December 30, 2022

grids. The equity took a significant hit from a negative revised outlook in a challenging market environment with a higher cost of capital. Another negative contribution to performance came from the U.S. utility Exelon Corporation, which was impacted by higher interest rates. Additionally, actions taken by the Illinois Commerce Commission hinted at a possible deterioration in the regulatory environment. Finally, in renewable energy, the Danish offshore wind-farm specialist Ørsted stood out at the bottom. Ørsted's equities have been on a downward trajectory for much of the year, driven by concerns about growth potential and higher interest rates. The decline accelerated in the second half of the year, particularly at the end of August, after Ørsted announced impairments on three offshore wind projects in the United States (Ocean Wind 1 in New Jersey, Sunrise Wind in New York and Revolution Wind in Connecticut).

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
70% MSCI WORLD INFRASTRUCTURE INDEX in EUR, 30% FTSE EPRA Nareit Developed Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 95.083  |
| Highest market risk exposure | % | 119.918 |
| Average market risk exposure | % | 111.720 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                         |                       |
|-------------------------|-----------------------|
| Class FC 0.84% p.a.,    | Class FD 0.84% p.a.,  |
| Class LC 1.61% p.a.,    | Class LD 1.61% p.a.,  |
| Class NC 2.10% p.a.,    | Class PFC 1.73% p.a., |
| Class TFC 0.86% p.a.,   | Class TFD 0.85% p.a., |
| Class XC 0.48% p.a.,    | Class XD 0.47% p.a.,  |
| Class USD XD 0.47% p.a. |                       |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 243 088.78.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

2023

|  |            |                       |  |
|--|------------|-----------------------|--|

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG NextGen Consumer

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve long-term capital appreciation in euro. To achieve this objective, the sub-fund invests predominantly in companies that benefit from changes in consumer habits driven by millennials and subsequent generations. The sub-fund concentrates on relevant sectors such as food, luxury goods, consumer goods, IT, communication services, mobility, energy, health and education. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the reporting period from the start of January 2023 through the end of December 2023, DWS Invest ESG NextGen Consumer recorded an appreciation of 20.7% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of

<sup>1</sup> Launched on November 30, 2021

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the

euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Net TR Index - in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 99.896  |
| Highest market risk exposure | % | 119.758 |
| Average market risk exposure | % | 111.286 |

## DWS Invest ESG NextGen Consumer

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                       |
|-----------------------|-----------------------|
| Class FC 0.92% p.a.,  | Class FD 0.91% p.a.,  |
| Class LC 1.78% p.a.,  | Class LD 1.77% p.a.,  |
| Class TFC 0.92% p.a., | Class TFD 0.91% p.a., |
| Class XC 0.45% p.a.,  | Class XD 0.45% p.a.   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given reporting period.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1238.60.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

## DWS Invest ESG Qi LowVol World

### Investment objective and performance in the reporting period

DWS Invest ESG Qi LowVol World seeks to generate sustained capital appreciation. To this end, the sub-fund predominantly invests worldwide in equities of international issuers. An attractive risk/opportunity ratio plays an important role in the portfolio composition. In addition, stocks are selected based on the principle of risk diversification (broad portfolio). This involves choosing a basket of securities that are expected to experience low price volatility. The focus is not on maximizing returns compared with the broader equity market. Investment decisions in terms of the selection of securities are based on scientifically sound actuarial analyses. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

DWS Invest ESG Qi LowVol World recorded an appreciation of 5.1% per share (LC share class; BVI method; in euro) in the 2023 calendar year.

Following its strategy, the defensive sub-fund DWS Invest ESG Qi LowVol World was not able to fully participate in the predominantly very positive performance of the market during the reporting period; cyclical positions benefited disproportionately.

### Investment policy in the reporting period

The risk-reducing managed volatility strategy is implemented in the DWS Invest ESG Qi LowVol World sub-fund. The strategy is based on a proprietary equity investment process. A core component of this quantitative process is a dynamic multi-factor approach to stock-picking that relies on a company database.

The objective of the investment strategy is to reduce risk compared with the market-capitalized MSCI World Index, which represents the investment universe. The reduced-volatility portfolio was invested on the basis of those equities that were positively valued using the model approach to stock selection relative to the overall market or that could make a contribution to risk diversification.

The risk reduction sought in comparison to a market-capitalized index, i.e. compared to the

MSCI World investment universe, resulted in underweightings in the cyclical sectors of information technology and industrial companies, as well as in an overweighting in the defensive sectors of utilities and consumer staples.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However,

inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes. The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

## DWS Invest ESG Qi LowVol World

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 64.176 |
| Highest market risk exposure | % | 98.188 |
| Average market risk exposure | % | 70.718 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 1197 820.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

| <b>V. Net gain/loss for the fiscal year . . . . .</b>                               | <b>EUR</b> | <b>6 626 559.92</b>  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                              |                         |
|------------------------------|-------------------------|
| Class FC 0.88% p.a.,         | Class FC EB 0.48% p.a., |
| Class FCH (P) EB 0.50% p.a., | Class FD 0.87% p.a.,    |
| Class LC 1.38% p.a.,         | Class LD 1.38% p.a.,    |
| Class ND 2.08% p.a.,         | Class TFC 0.87% p.a.,   |
| Class TFD 0.84% p.a.,        | Class USD LC 1.37% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 53 525.29.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 1585.75.

# Annual report

## DWS Invest ESG Qi US Equity (in liquidation)

### Investment objective and performance in the reporting period

The objective of the investment policy was to generate sustained capital appreciation and surpass the performance of the benchmark. To achieve this, the sub-fund invested in U.S. equities that were selected primarily based on fundamental analysis criteria; their weightings took risk/reward considerations into account. The stock selection was based on a proprietary quantitative investment approach that was managed by the Quantitative Investments (Qi) Group. Investment decisions were taken by weighing up investment opportunities, which were determined based on analysis of the fundamental and technical data, against the associated risks and cost aspects. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) were taken into consideration alongside the financial performance.\* In this context, the selection of individual investments was the responsibility of the sub-fund management.

In the reporting period from the beginning of January through December 22, 2023 (date of last share price calculation), the sub-fund recorded an appreciation of 20.2% per share (USD IC share class; BVI method). Its benchmark, the MSCI USA, posted a gain of 20.8% in the same period (both percentages in U.S. dollar terms).

### DWS Invest ESG Qi US Equity (in liquidation)

Performance of share classes vs. benchmark (in USD)

| Share class<br>fiscal year | ISIN         | Since the beginning of the shortened |
|----------------------------|--------------|--------------------------------------|
| Class USD IC               | LU1978535810 | 25.3%                                |
| Class USD RC               | LU1978536115 | 24.8%                                |
| MSCI USA                   |              | 26.7%                                |

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 15, 2023 (liquidation date)

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes. The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges recorded strong price gains overall, boosted in particular by technology stocks, which

benefited from growing interest in the topic of artificial intelligence. This also benefited the sub-fund's performance.

### Liquidation

The sub-fund DWS Invest ESG Qi US Equity (in liquidation) was liquidated effective December 22, 2023. The issue and redemption of shares was discontinued on December 14, 2023. Orders received by the order acceptance deadline were taken into account.

### Information on the environmental and/or social characteristics

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Developed - US Net TR Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 95.768  |
| Highest market risk exposure | % | 110.579 |
| Average market risk exposure | % | 99.213  |

The values-at-risk were calculated for the period from January 1, 2023, through December 12, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

| Euro .....        | EUR | 0.909670 | = | USD | 1 |
| U.S. dollar ..... |     | 0.000000 | = | USD | 1 |

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective December 22, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class USD IC 0.23%<sup>2</sup>,                      Class USD RC 0.60%<sup>2</sup>

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>2</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 5 662.95.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.94% of all transactions. The total volume was USD 2 890 471.25.

# Annual report

## DWS Invest ESG Real Assets

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve positive long-term capital appreciation. To achieve this objective, the sub-fund invests predominantly in exchange-traded real assets. "Real assets" is a collective term for listed real estate, listed infrastructure companies, global natural resource equities as well as certificates on commodities and commodities indices. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

In the reporting period from January 1, 2023, through December 31, 2023, the sub-fund recorded an appreciation of 0.5% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

Real assets delivered a slightly positive nominal return in the twelve months ending December 31, 2023, but underperformed the broader equity market, as measured by the MSCI World.

Put simply, most asset classes outperformed expectations for the reporting year, given that the United States (and other regions of the world) were widely expected to enter recession. Still, 2023 was a volatile year for riskier assets. The broader equity markets posted solid gains, largely thanks to strong advances by a number of tech equities through the end of the year. Central banks were mostly tightening, but then appeared to be loos-

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

ening the reins a little toward the end of the year. Longer-term interest rates generally headed higher in both real and nominal terms, causing some damage in the process, but they began to relent in the final two months of the year. The U.S. survived a short-lived banking crisis, a debt ceiling standoff, and intense political bickering on how to draft a budget. The expected economic recovery in China did not materialize despite several fiscal support measures. In fact, the economy actually contracted in some areas. The Russia-Ukraine conflict persisted without either side gaining any real advantages. The conflict in the Middle East flared up again later in the year.

Against this backdrop, real assets underperformed the broader equity market but still closed the year at a stable level or with slight gains. The global real estate sector

performed best, followed by precious metals. Global infrastructure stocks and inflation-protected bonds (TIPS) achieved slightly positive returns, while commodity stocks performed mixed.

Global real estate stocks finished strong after a volatile year as macroeconomic conditions shifted in the sector's favor. Remarkably, the 10-year U.S. Treasury yield ended the year at within 1 basis point of where it was at the start of the year (3.87%), but it underwent extreme fluctuations over the course of the year. The year-end rally helped global real estate stocks end a challenging year on a positive note. Despite solid gains, the global real estate sector significantly underperformed the broader equity market in 2023. Global infrastructure stocks presented a mixed picture. Higher interest rates weighed on some of

the more rate-sensitive infrastructure sub-sectors, including utility and communication equities. More cyclical infrastructure sub-sectors such as transportation performed well by contrast. TIPS achieved moderate gains in the reporting year. The performance of natural gas and other commodity equities was mixed: steel and precious metals stood out positively, while agricultural producers were relatively weak.

In the reporting period, the sub-fund recorded a slight gain, but underperformed the MSCI World Index on a relative basis (both in euro terms). Particularly positive contributions to investment performance were attributable to the positioning in some of the more cyclical infrastructure sub-sectors, such as transportation in Europe and railroads and waste management in the Americas, and to the positioning in precious metals, thanks to the strong performance of gold prices. TIPS (ex-U.S.) also made a solid contribution to performance. In the global real estate sector, data centers in the Americas stood out, benefiting from industry-wide demand at all-time highs and AI driving the next growth cycle. At the other end, the largest negative contributions to performance came from agrochemicals and agricultural products, as well as from utilities in the Americas and in Europe, as higher interest rates weighed on the more defensive market segments. Selective exposure to the Hong Kong real estate sector also adversely affected the portfolio as concerns over the Chinese economy weighed on real estate values in the region.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

### Composition of the reference portfolio (according to CSSF circular 11/512)

27.5% Dow Jones Brookfield Global Infrastructure Net Total Return Index in EUR, 27.5% FTSE EPRA Nareit Developed Net Index EUR, 25% BBG Global Inflation Linked Floating Composite in EUR, 20% S&P Global Natural Resources Net Total Return in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 78.819  |
| Highest market risk exposure ..... | % | 112.755 |
| Average market risk exposure ..... | % | 91.145  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

## DWS Invest ESG Real Assets

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                               |
|-------------------------------|-------------------------------|
| Class FC 0.69% <sup>1</sup> , | Class FD 0.69% <sup>1</sup> , |
| Class IC 0.53% <sup>1</sup> , | Class ID 0.53% <sup>1</sup> , |
| Class LC 1.60% p.a.,          | Class LD 1.61% p.a.,          |
| Class TFC 0.84% p.a.,         | Class XD 0.44% p.a.,          |
| Class USD LC 1.59% p.a.,      | Class USD LD 1.59% p.a.,      |
| Class USD TFC 0.84% p.a.,     | Class USD XD 0.46% p.a.,      |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 165 800.75.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## DWS Invest ESG Smart Industrial Technologies

### Investment objective and performance in the reporting period

The sub-fund DWS Invest ESG Smart Industrial Technologies invests predominantly in equities of domestic and foreign issuers that are active in the provision of pioneering infrastructure or the manufacture of future-oriented industrial goods and generate at least 20% of their revenues in these sectors. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the fiscal year from the beginning of January through the end of December 2023, the sub-fund recorded an appreciation of 15.3% per share (LC share class; BVI method). Its benchmark, the MSCI World Industrials Net TR, recorded a gain of 18.8% in the same period (both percentages in euro terms).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

As of: December 31, 2023

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be

less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

In the reporting period, the equities of General Electric, Parker-Hannifin and Eaton made an above-average contribution to the sub-fund's performance. While the price performance of General Electric benefited from splitting the group into its three core areas, the new portfolio composition and the increased level of capital investment in relation to Parker Hannifin had a positive impact. Eaton benefited from increased investment in the construction and electric cabling of factories, data centers and infrastructure. In addition, all

three companies profited from a strong commercial aviation sector.

In contrast, Teleperformance equities made a significantly below-average contribution to the performance of the sub-fund. The company recorded slower growth due to reductions in customer budgets. Equities of Solaredge Technologies, that suffered from strongly declining sales due to inventory reduction in the solar market for private households, also made a significantly below-average contribution. Carl Zeiss Meditec came under pressure both in terms of valuation due to higher interest rates as well as because of lower demand in China.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Industrials NET EUR version Composite

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 98.663  |
| Highest market risk exposure ..... | % | 109.048 |
| Average market risk exposure ..... | % | 102.828 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>754 782.10</b>   |  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                       |
|---------------------------|-----------------------|
| Class FC 0.92% p.a.,      | Class LC 1.78% p.a.,  |
| Class LD 1.77% p.a.,      | Class NC 2.34% p.a.,  |
| Class PFC 2.71% p.a.,     | Class TFC 0.91% p.a., |
| Class USD TFCH 0.94% p.a. |                       |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 346.83.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 42.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG Top Euroland

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG Top Euroland is to generate above-average returns. The net assets of the sub-fund are primarily invested in equities from issuers with their headquarters in a member state of the European Economic and Monetary Union. The sub-fund focuses on larger caps. Moreover, the portfolio management seeks to manage a concentrated portfolio containing some 40–60 different equities. However, the strategy can deviate from the diversification objective mentioned, depending on the market situation. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the fiscal year from the beginning of January through the end of December 2023, the sub-fund recorded an appreciation of 18.6% per share (LC share class; BVI method), while the EURO STOXX 50 benchmark increased 22.2% in the same period (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

In addition to the U.S. exchanges that – boosted in particular by technology stocks in the face of growing interest in the topic of artificial

intelligence – recorded strong price gains as measured by the S&P 500, the equity markets in the European industrial countries also posted appreciable price increases in the 2023 calendar year. For example, the German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Against this backdrop, the European equities contained in the portfolio also recorded a significant price increase overall in the reporting period.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
STOXX Eurozone 50 (Net Return)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 88.146  |
| Highest market risk exposure ..... | % | 107.044 |
| Average market risk exposure ..... | % | 100.389 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

| U.S. dollar .....      | USD | 1.107000  | = | EUR | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

## Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                            |
|-------------------------------|----------------------------|
| Class FC 0.84% p.a.,          | Class FD 0.83% p.a.,       |
| Class IC 0.55% p.a.,          | Class LC 1.59% p.a.,       |
| Class LD 1.59% p.a.,          | Class NC 2.29% p.a.,       |
| Class PFC 1.93% p.a.,         | Class TFC 0.84% p.a.,      |
| Class TFD 0.84% p.a.,         | Class GBP D RD 0.83% p.a., |
| Class SGD LCH (P) 1.62% p.a., | Class USD FCH 0.87% p.a.,  |
| Class USD LCH 1.62% p.a.      |                            |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

## DWS Invest ESG Top Euroland

---

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG USD Corporate Bonds (in liquidation)

### Investment objective and performance in the reporting period

The bond sub-fund sought to achieve sustained capital appreciation relative to the benchmark (Barclays Capital US Credit Index). To achieve this objective, it invested at least 80% of its assets globally in bonds that were denominated in U.S. dollars. Investable bonds included “near-government” bonds (issued by government agencies, local authorities, supranational institutions and sovereign countries) and corporate bonds. Aspects considered when selecting investments included financial strength and also a focus on environmental, social and corporate governance (ESG) criteria. The sub-fund’s investments in covered bonds, ABS/MBS and U.S. government bonds were limited to a maximum of 20% of its assets. Up to 20% of the sub-fund’s assets were invested in interest-bearing debt instruments rated below investment-grade that had a rating of at least B3 (Moody’s) or B- (S&P and Fitch) at the time of acquisition. Derivatives could be used for hedging and investment purposes.

In the period from the beginning of January 2023 through April 12, 2023 (liquidation date), the sub-fund DWS Invest ESG USD Corporate Bonds (in liquidation) recorded an appreciation of 2.2% (USD LD share class; BVI method), underperforming its benchmark, which returned +3.5% (both percentages in U.S. dollar terms).

“BVI method” performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: April 12, 2023 (liquidation date)

### Investment policy in the reporting period

In line with its investment policy, the sub-fund remained invested in corporate bonds and issues of financial services providers (financials). This largely included issues with investment-grade status (ratings of BBB- or better from the leading rating agencies). In terms of its regional allocation, the portfolio was globally positioned, although issues from the United States were the main focus of investment.

With a view to the upcoming liquidation of the sub-fund, the securities in the portfolio were progressively sold up until the end of the reporting period (April 12, 2023).

### Liquidation

The sub-fund DWS Invest ESG USD Corporate Bonds (in liquidation) was liquidated effective April 12,

2023, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective March 13, 2023. Investors could redeem sub-fund shares until March 13, 2023.

## DWS Invest ESG USD Corporate Bonds (in liquidation)

### Composition of the reference portfolio (according to CSSF circular 11/512)

BBG U.S. Credit Index

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 0.000   |
| Highest market risk exposure ..... | % | 104.360 |
| Average market risk exposure ..... | % | 80.178  |

The values-at-risk were calculated for the period from January 1, 2023, through April 12, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Bofa Securities Europe S.A., J.P. Morgan SE and Royal Bank of Canada (UK).

### Exchange rates (indirect quotes)

As of April 12, 2023 (liquidation date)

Euro ..... EUR      0.911120      =      USD      1

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective April 12, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                  |                                  |
|----------------------------------|----------------------------------|
| Class FCH 0.19% <sup>1</sup>     | Class LCH 0.32% <sup>1</sup>     |
| Class TFCH 0.21% <sup>1</sup>    | Class XCH 0.10% <sup>1</sup>     |
| Class USD FC 0.19% <sup>1</sup>  | Class USD LD 0.31% <sup>1</sup>  |
| Class USD TFC 0.19% <sup>1</sup> | Class USD TFD 0.20% <sup>1</sup> |
| Class USD XC 0.09% <sup>1</sup>  |                                  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year.

### Transaction costs

The transaction costs paid in the reporting period amounted to USD 423.04.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                |  |
|--|------------|----------------|--|

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

## DWS Invest ESG USD Corporate Bonds (in liquidation)

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

## DWS Invest ESG Women for Women

### Investment objective and performance in the reporting period

The sub-fund DWS Invest ESG Women for Women seeks to generate an above-average return. To achieve this, it predominantly invests in equities issued by domestic and foreign companies. The sub-fund pursues the sustainable investment goal of exerting a positive influence in terms of social factors and simultaneously offering long-term capital appreciation by investing in companies that focus greatly on diversity and equality in conjunction with sustainable business practices. The sub-fund not only covers topics related to (gender) diversity but is based on a valuation model that also takes into account general social issues. It invests in companies that are highly dynamic and show improvement in relation to promoting general diversity within the company (rate-of-change approach), as well as in companies that are already pioneers of diversity in their industry ("best-in-class" approach).

In addition, the companies should have a sustainable business model, solid fundamentals and the potential for long-term structural growth. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration.\* These aspects are an integral component of the investment strategy.

In the past twelve months through the end of December 2023, the sub-fund DWS Invest ESG Women for Women recorded an appreci-

ation of 8.2% per share (LC share class; in euro; BVI method).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

The portfolio of the equity sub-fund DWS Invest ESG Women for Women maintained a global orientation. The investment focus was on growth and value stocks of companies that – in the opinion of the portfolio management – meet high social and labor standards and are also able to benefit from structural growth trends (e.g., digitalization, education). In terms of country allocation, the sub-fund was generally broadly positioned on the reporting date, even though U.S. equities were an investment focus. With respect to

industry allocation, it was broadly diversified. Nevertheless, the areas of information technology, finance, health care, and consumer discretionary had a somewhat stronger focus.

The sub-fund benefited in particular from its equity investments in the information technology (IT), health care, communication services and finance sectors that made the greatest contribution to the sub-fund's investment gain. This included equities from, for example, Microsoft, the pharmaceutical group Eli Lilly, Deutsche Telekom and the U.S. vehicle insurance company Progressive Corporation. In contrast, the equity investments in the areas of utilities, cyclical consumer goods and energy had a negative impact on the sub-fund's performance. This included, for example, Zalando (online clothing and shoes retailer), Solaredge (energy technology) and Orsted (energy supplier).

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Net TR Index - in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 65.161 |
| Highest market risk exposure ..... | % | 99.695 |
| Average market risk exposure ..... | % | 92.052 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 4 138 963.72 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>Total expenses . . . . .</b>  | <b>EUR -217 390.60</b>   |
| <b>III. Net investment income . . . . .</b>                                      | <b>EUR 602 971.11</b>    |
| IV. Sale transactions  |                          |
| Realized gains/losses . . . . .  | EUR -1 717 542.60        |
| <b>Capital gains/losses . . . . .</b>  | <b>EUR -1 717 542.60</b> |
| <b>V. Net gain/loss for the fiscal year . . . . .</b>                            | <b>EUR -1 114 571.49</b> |

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                       |
|-----------------------|-----------------------|
| Class FC 0.87% p.a.,  | Class FD 0.82% p.a.,  |
| Class LC 1.75% p.a.,  | Class LD 1.75% p.a.,  |
| Class TFC 0.94% p.a., | Class TFD 0.91% p.a., |
| Class XC 0.45% p.a.,  | Class XD 0.45% p.a.   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given reporting period.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 44 520.05.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets 2023

|  |                          |

## Details on the distribution policy\*

### Class FC

The income for the fiscal year is reinvested.

### Class FD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.09      |

### Class LC

The income for the fiscal year is reinvested.

### Class LD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 0.22      |

### Class TFC

The income for the fiscal year is reinvested.

### Class TFD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.00      |

### Class XC

The income for the fiscal year is reinvested.

### Class XD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.45      |

\* Additional information is provided in the sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Euro Corporate Bonds

### Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (iBoxx € Corporate). To this end, it invests in euro-denominated corporate bonds. Derivatives are used for hedging and for investment purposes. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund DWS Invest Euro Corporate Bonds recorded an appreciation of 8.2% (LC share class; BVI method) in the last twelve months through the end of December 2023, and thus matched its benchmark, which returned +8.2% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the

bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In line with its investment policy, the sub-fund remained focused on corporate bonds and interest-bearing instruments of financial services providers. In terms of regional allocation, preference was given to issues from Europe and the U.S. Most of the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date.

Banking bonds that were previously weighted even lower were gradually increased in the sub-fund portfolio from the beginning of 2023, partly due to the greater bond issue activity on the market. Overall, the overweighting in banking bonds and in bonds of telecommunications companies made a significant contribution to the sub-fund's investment gain.

The chemicals sector and other cyclical sectors, from Europe in particular, were underweighted in the bond portfolio. However, the underweighting in the area of energy and the overweighting in the utilities sector had an adverse effect on the sub-fund's performance.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
 Markit iBoxx Euro Corporate Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 88.489  |
| Highest market risk exposure | % | 111.027 |
| Average market risk exposure | % | 99.489  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 236 388 337.49 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Goldman Sachs Bank Europe SE, Morgan Stanley Europe SE, State Street Bank International GmbH and UBS AG.

| U.S. dollar   | USD | 1.107000  | = EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                           |
|-----------------------------|---------------------------|
| Class CHF FCH 0.68% p.a.,   | Class FC 0.66% p.a.,      |
| Class FC10 0.46% p.a.,      | Class IC 0.42% p.a.,      |
| Class IC100 0.23% p.a.,     | Class ID100 0.23% p.a.,   |
| Class LC 0.96% p.a.,        | Class LD 0.96% p.a.,      |
| Class NC 1.36% p.a.,        | Class NDQ 1.36% p.a.,     |
| Class PFC 1.60% p.a.,       | Class PFDQ 1.11% p.a.,    |
| Class TFC 0.66% p.a.,       | Class TFD 0.66% p.a.,     |
| Class GBP CH RD 0.69% p.a., | Class SEK LCH 0.98% p.a., |
| Class USD FCH 0.67% p.a.    |                           |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                              |                            |
|------------------------------|----------------------------|
| Class CHF FCH 0.014% p.a.,   | Class FC 0.014% p.a.,      |
| Class FC10 0.014% p.a.,      | Class IC 0.013% p.a.,      |
| Class IC100 0.014% p.a.,     | Class ID100 0.012% p.a.,   |
| Class LC 0.014% p.a.,        | Class LD 0.014% p.a.,      |
| Class NC 0.013% p.a.,        | Class NDQ 0.013% p.a.,     |
| Class PFC 0.014% p.a.,       | Class PFDQ 0.014% p.a.,    |
| Class TFC 0.014% p.a.,       | Class TFD 0.014% p.a.,     |
| Class GBP CH RD 0.013% p.a., | Class SEK LCH 0.013% p.a., |
| Class USD FCH 0.013% p.a.    |                            |

of the fund's average net assets in relation to the respective share class.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 22 325.91.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets 2023

|  |     |                             |
|--|-----|-----------------------------|

## DWS Invest Euro Corporate Bonds

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 7.52% of all transactions. The total volume was EUR 669 116 326.99.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Euro High Yield Corporates

### Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (ML Euro BB-B Non-Financial Fixed & FRN High Yield Constrained). To this end, it invests worldwide in corporate bonds, concentrating its investments on high-yield bonds. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund DWS Invest Euro High Yield Corporates recorded an appreciation of 10.9% (LC share class; BVI method) in the last twelve months through the end of December 2023, but it underperformed its benchmark (+12.4%; both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year

through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The portfolio management continued to invest globally in high-yield corporate bonds, focusing on European issues. These high-yield bonds are non-investment-grade interest-bearing securities that are generally traded in the capital markets at considerably higher risk premiums relative to government bonds from the core markets, but offer noticeably higher yields in return. To take account of risk, the portfolio management concentrated its investments on high-yield bonds with ratings of BB and B from the leading rating agencies. Nevertheless, the sub-fund had less exposure to the BB segment and more exposure to the B and CCC rating ranges relative to the benchmark. In terms of its sector allocation, the portfolio was generally broadly diversified, although the sub-fund's portfolio was overweight in financial services providers, chemicals and residential real estate, but overweight in the automotive sector by contrast. Whereas, with this focus, the sub-fund performed better than its benchmark from the beginning of the fiscal year until into the third

quarter of 2023, it was not able to keep pace with its benchmark in the fourth quarter of 2023 during the rally at the end of the year due to its more defensive orientation.

## DWS Invest Euro High Yield Corporates

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
ICE BofA BB-B Euro HY Non-Financial Fixed & Floating Constrained Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 95.884  |
| Highest market risk exposure | % | 118.584 |
| Average market risk exposure | % | 106.330 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 631 576 886.10 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for derivatives (with the exception of forward currency transactions)

CIT = Citibank AG

GS = Goldman Sachs AG

| U.S. dollar   | USD | 1.107000  | = | EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Some or all of these securities are lent.

\*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\*\* Does not include positions with a negative balance, if such exist.

of the fund's average net assets in relation to the respective share class.

<sup>5</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 25 612.40.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

# DWS Invest Euro High Yield Corporates

## Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.15% of all transactions. The total volume was EUR 119 532 385,20.

## Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

## Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Euro-Gov Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Euro-Gov Bonds seeks to generate sustained capital appreciation relative to the benchmark (iBoxx Sovereign Eurozone Overall). To achieve this objective, the sub-fund invests in government bonds and bonds of government institutions denominated in euro or hedged against the euro. Eligible government institutions include central banks, government authorities, regional and local authorities and supranational institutions. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

The sub-fund DWS Invest Euro-Gov Bonds recorded an appreciation of 7.1% per share (LC share class; BVI method) in the last twelve months through the end of December 2023, making it almost equal to its benchmark (+7.2%; both percentages in euro).

### Investment policy in the reporting period

The sub-fund's portfolio was broadly diversified in general. In line with the investment policy, the portfolio management invested in government issues from the euro area. In terms of regional allocation, it had reduced the weighting of interest-bearing instruments from the core markets, for example Germany, because of their initially low yields. Instead, the management preferred interest-bearing securities from Belgium and Ireland. In addition, bonds from southern European euro countries, above all Italy and Spain, were

As of: December 31, 2023

initially overweighted but were neutrally weighted in the second half of the year. The bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date. Government bonds from issuers outside the euro area rounded out the portfolio.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and

in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023.

Due to the decline in yields in the bond markets, the sub-fund recorded price gains in relation

to the bonds, which had a positive effect on its performance. In 2023, the yield spreads between the non-government interest-bearing securities (such as mortgage bonds) held in the portfolio and German government bonds remained stable, enabling the sub-fund to benefit from the higher coupon revenue of these interest-bearing instruments. In anticipation of the end of the interest rate increases by the European Central Bank (ECB), the portfolio management invested predominately in the short and long-term maturities sector; however, the medium-term maturities segment was underweighted as the yields in this segment were the lowest across the entire yield curve. In contrast, an adverse impact on the performance of the sub-fund in comparison with its benchmark resulted from its underweighting in Italian government bonds in the second half of 2023 as, despite statements from the ECB concerning discontinuation of the bond purchase program, the yield spreads of Italian bonds narrowed in comparison with federal government bonds.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Markit iBoxx Eurozone Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 85.896  |
| Highest market risk exposure | % | 107.902 |
| Average market risk exposure | % | 99.543  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                         |                         |
|-------------------------|-------------------------|
| Class FC 0.42% p.a.,    | Class FC100 0.22% p.a., |
| Class IC 0.34% p.a.,    | Class IC100 0.18% p.a., |
| Class ID100 0.18% p.a., | Class LC 0.68% p.a.,    |
| Class LD 0.68% p.a.,    | Class NC 1.28% p.a.,    |
| Class TFC 0.46% p.a.,   | Class TFD 0.43% p.a.    |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                          |                          |
|--------------------------|--------------------------|
| Class FC 0.022% p.a.,    | Class FC100 0.023% p.a., |
| Class IC 0.023% p.a.,    | Class IC100 0.023% p.a., |
| Class ID100 0.023% p.a., | Class LC 0.022% p.a.,    |
| Class LD 0.023% p.a.,    | Class NC 0.023% p.a.,    |
| Class TFC 0.024% p.a.,   | Class TFD 0.023% p.a.    |

of the fund's average net assets in relation to the respective share class.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 27 263.50.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 9.04% of all transactions. The total volume was EUR 285 187 561.80.

# Annual report

## DWS Invest European Equity High Conviction

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest European Equity High Conviction is to achieve the highest possible appreciation of capital invested in euro. Equities, interest-bearing securities, convertible debentures and warrant-linked bonds, participation and dividend-right certificates, equity warrants and index certificates can be purchased for the sub-fund's assets. At least 75% of the sub-fund's assets are invested in equities of issuers having their headquarters in a member state of the EU, the United Kingdom, Norway and/or Iceland.

The focus is on companies that have a good market position, future-oriented products and competent management. Furthermore, the companies should concentrate on their strengths and pursue a strategy that seeks a yield-oriented use of resources and above-average profit growth. In addition to these criteria, the companies should have shareholder-centered information policies, including detailed information about accounting and regular communication with investors. Accordingly, shares of companies shall be acquired that are expected to achieve results and/or share prices that are above average relative to the broad market. Up to 25% may be invested in interest-bearing securities, money market instruments and bank balances. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken

into consideration alongside the financial performance.\*

The sub-fund recorded an appreciation of 13.3% per share (LC share class; BVI method) in the fiscal year from the beginning of January through the end of December 2023, while the benchmark MSCI Europe index posted an appreciation of 16.6% in the same period (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

In addition to the U.S. exchanges that – boosted in particular by technology stocks in the face of growing interest in the topic of artificial intelligence – recorded strong price gains as measured by the S&P 500, the equity markets in the European industrial countries also posted appreciable price increases in the 2023 calendar year. For example, the German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing

of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Against this backdrop, the European equities contained in the portfolio also recorded a significant price increase overall in the reporting period.

### Composition of the reference portfolio (according to CSSF circular 11/512)

MSCI Europe Net Index in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 92.599  |
| Highest market risk exposure | % | 103.317 |
| Average market risk exposure | % | 98.090  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                         |                       |
|-------------------------|-----------------------|
| Class FC 0.91% p.a.,    | Class LC 1.77% p.a.,  |
| Class LD 1.77% p.a.,    | Class NC 2.47% p.a.,  |
| Class TFC 0.92% p.a.,   | Class TFD 0.94% p.a., |
| Class USD LC 1.77% p.a. |                       |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 46 541.37.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest Financial Hybrid Bonds (in liquidation)

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Financial Hybrid Bonds sought to generate above-average returns. To achieve this objective, it invested predominantly in hybrid bonds issued by issuers from the financial sector. Hybrid bonds are subordinated corporate bonds with characteristics similar to those of equities, and very long or unlimited maturities, which can be called by the issuer at a predetermined date. They represent a mixture between equities and fixed rate securities. Derivatives could be used in hedging activities and for investments. Aspects considered when selecting investments included financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.

In the period from the beginning of January 2023 through October 20, 2023 (liquidation date), the sub-fund DWS Invest Financial Hybrid Bonds (in liquidation) recorded an appreciation of 3.1% per share (FC share class; in euro; BVI method).

### Investment policy in the reporting period

The sub-fund's investment focus continued to be placed on hybrid bonds issued by financial service providers. Hybrid bonds are bonds that, because of their configuration, have both debt and equity characteristics. Equity characteristics can include, among others, participation in losses and profit-linked interest payments. Debt characteristics can include, among others, a fixed maturity date or call dates fixed on issue, which are frequently associated with hybrid bonds.

### DWS Invest Financial Hybrid Bonds (in liquidation)

Performance of share classes (in EUR)

| Share class | ISIN         | Since the beginning of the shortened fiscal year <sup>1</sup> |
|-------------|--------------|---|
| Class FC    | LU1318737514 | 3.1%  |
| Class FD    | LU1322112308 | 3.1%  |

<sup>1</sup> Last share price calculation on September 29, 2023

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: October 20, 2023 (liquidation date)

Hybrid bonds also encompass subordinated bonds (Tier 1 and Tier 2 bonds), dividend-right certificates, convertible and warrant-linked bonds, as well as subordinated insurance bonds and contingent convertible bonds ("CoCos").

The investment focus of the sub-fund was placed on contingent convertible bonds. These were long-term subordinated bonds paying a fixed coupon. The bonds are automatically converted from debt to equity in line with predetermined conversion triggers, and have a relatively low sensitivity to interest rates.

The portfolio was broadly diversified overall. When selecting individual issues, preference was given to bonds of issuers with sufficient capitalization. The regional emphasis was on bonds from Europe. The interest-bearing securities held in the portfolio included issues both with investment-grade status and high-yield bonds with lower credit quality.

With a view to the upcoming liquidation of the sub-fund, the securities in the portfolio were progressively sold up until the end of the reporting period (October 20, 2023).

### Liquidation

The sub-fund DWS Invest Financial Hybrid Bonds (in liquidation) was liquidated effective October 20, 2023, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue and redemption of shares of the sub-fund was discontinued effective October 12, 2023. After all assets had been liquidated, the sub-fund was temporarily reopened to all investors from 5 October 2023 through 17 October 2023 (acceptance deadline) to redeem shares.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |       |
|------------------------------------|---|-------|
| Lowest market risk exposure .....  | % | 0.000 |
| Highest market risk exposure ..... | % | 8.244 |
| Average market risk exposure ..... | % | 3.821 |

The values-at-risk were calculated for the period from January 1, 2023, through October 20, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

#### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective October 20, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC 0.56%<sup>1</sup>,                      Class FD 0.56%<sup>1</sup>

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.30% of all transactions. The total volume was EUR 265 000.00.

# Annual report

## DWS Invest German Equities

### Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation in the medium to long term relative to the benchmark (CDAX (RI)). To achieve this objective, it invests mainly in equities of German issuers, with an emphasis placed on a broad market investment in blue-chip stocks and in selected small- and mid-caps. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

The sub-fund DWS Invest German Equities recorded an appreciation of 17.3% per share (LC share class; BVI method) in the last twelve months through the end of December 2023 but underperformed its benchmark, which returned +19.0% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening eco-

As of: December 31, 2023

nomical growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX or CDAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic

slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year.

In the context of sector allocation, the overweighting of the information technology (IT) and industrials sectors proved to be beneficial for the sub-fund portfolio. However, the higher weighting in the health care sector and the inclusion of secondary stocks were disappointing and had a negative impact on the sub-fund's appreciation.

In terms of stock selection, the SAP equities were the investment focus. Nevertheless, compliance with the investment limits meant that the sub-fund was not able to benefit from the increase in price

of this equity to the same extent as its benchmark. Other reasons why the sub-fund did not match its benchmark were, for example, the initial underweighting in the non-cyclical sector of communication services and the initially even higher weighting in the cyclical sector of basic materials. Thus, for example, Deutsche Telekom was able to present strong results and raise its forecast for 2023 during the year. In contrast, against the backdrop of volatile economic development, stocks in the basic materials industry suffered from the weakening Chinese economy among other things. The initial positions in Lanxess and Kali + Salz were thus cut and the investment in BASF was reduced.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
DAX CDAX Index

## DWS Invest German Equities

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 96.149  |
| Highest market risk exposure | % | 128.962 |
| Average market risk exposure | % | 107.857 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 21228 678.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Société Générale and State Street Bank International GmbH.

### Exchange rates (indirect quotes)

As of December 29, 2023

|               |     |          |       |   |
|---------------|-----|----------|-------|---|
| Swiss franc   | CHF | 0.927777 | = EUR | 1 |
| British pound | GBP | 0.869326 | = EUR | 1 |
| U.S. dollar   | USD | 1.107000 | = EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                             |
|---------------------------|-----------------------------|
| Class FC 0.89% p.a.,      | Class LC 1.65% p.a.,        |
| Class LD 1.65% p.a.,      | Class NC 2.35% p.a.,        |
| Class PFC 1.73% p.a.,     | Class TFC 0.90% p.a.,       |
| Class TFD 0.89% p.a.,     | Class GBP CH RD 0.93% p.a., |
| Class USD FCH 0.92% p.a., | Class USD LC 1.64% p.a.,    |
| Class USD LCH 1.67% p.a.  |                             |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 58 293.39.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |     |                |            |                       |
|--|-----|----------------|------------|-----------------------|
| <b>I. Value of the fund's net assets<br/>at the beginning of the fiscal year</b> . . . . . |     |                | <b>EUR</b> | <b>180 348 732.66</b> |
| 1. Distribution for the previous year . . . . .  | EUR | -1 866 520.32  |            |                       |
| 2. Net outflows <sup>2</sup> . . . . .   | EUR | -32 879 132.25 |            |                       |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.02% of all transactions. The total volume was EUR 3 132 521.89.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

## DWS Invest Global Agribusiness

### Investment objective and performance in the reporting period

DWS Invest Global Agribusiness invests mainly in equities of domestic and foreign issuers that are predominantly active in, or benefit from, the agricultural industry. The agricultural industry includes companies involved in the cultivation, harvesting, planning, production, processing and sale of agricultural products, as well as those providing services in these areas. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

DWS Invest Global Agribusiness recorded a decline of 10.7% per share (LC share class; BVI method; in euro) in the fiscal year through the end of December 2023.

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes. In this investment climate, the international stock exchanges recorded noticeable price increases overall in the reporting period. However, this did not apply to equities with exposure to the agricultural industry which recorded below-average performance in the reporting period.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

\* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

S&P Global Agribusiness Equity Price Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 69.838 |
| Highest market risk exposure | % | 89.281 |
| Average market risk exposure | % | 80.522 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                            |                             |
|----------------------------|-----------------------------|
| Class FC 0.88% p.a.,       | Class IC 0.59% p.a.,        |
| Class LC 1.63% p.a.,       | Class LD 1.64% p.a.,        |
| Class NC 2.33% p.a.,       | Class PFC 2.91% p.a.,       |
| Class TFC 0.85% p.a.,      | Class TFD 0.88% p.a.,       |
| Class GBP D RD 0.88% p.a., | Class GBP LD DS 1.63% p.a., |
| Class SGD LC 1.64% p.a.,   | Class USD FC 0.88% p.a.,    |
| Class USD IC 0.58% p.a.,   | Class USD LC 1.64% p.a.,    |
| Class USD TFC 0.87% p.a.   |                             |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to USD 198 743.21.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest Global Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Global Bonds seeks to achieve sustained capital appreciation. To this end, it invests worldwide in government bonds, bonds of quasi-government issuers, corporate bonds and asset-backed bonds. Eligible quasi-government issuers include central banks, government authorities, local authorities and supra-national institutions. Corporate bonds with a rating below investment-grade and bonds from issuers from emerging markets may also be included. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.\*

In the past twelve months through the end of December 2023, the sub-fund DWS Invest Global Bonds recorded an appreciation of 4.7% per share (FC share class; in euro; BVI method).

### Investment policy in the reporting period

For yield reasons, the portfolio management continued to favor investment in corporate bonds, including bonds issued by financial service providers (financials), as opposed to government bonds. With regard to stock selection, there was an emphasis on issues with investment-grade ratings, meaning those rated BBB- or better by the leading rating agencies. High-yield bonds rounded out the bond portfolio.

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the

high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

Within the framework of its proactive duration management, the portfolio management used liquid interest rate derivatives to limit price declines caused by increasing interest rates. In the face of an inverted yield structure on the markets (bonds with a shorter residual maturity yielded more than longer-dated interest-bearing instruments), the maturity of the bond portfolio was shortened in the fourth quarter of 2023. In addition, the exposure to government bonds with high credit ratings was reduced in favor of higher-yield securities of government or near-government issuers. The portfolio management also invested more extensively in corporate bonds, including issues from the industrials sector, and increased its positions in financials (bonds of financial services providers). Subordinated bonds were also used. Toward the end of the reporting period, positions in high-yield bonds were selectively reduced in order to avoid further potential price losses.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 0.933 |
| Highest market risk exposure | % | 2.761 |
| Average market risk exposure | % | 1.702 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 26 585 985.50 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year . . . . .</b>                            | <b>EUR</b> | <b>-4 218 134.22</b> |

<sup>1</sup>This includes primarily income from the release of excess accruals in the amount of EUR 1 309.14.

#### BVI total expense ratio (TER)

The total expense ratio for the share class was:

|                             |                             |
|-----------------------------|-----------------------------|
| Class CHF LCH 1.06% p.a.,   | Class FC 0.62% p.a.,        |
| Class FD 0.62% p.a.,        | Class IC 0.41% p.a.,        |
| Class LC 1.08% p.a.,        | Class LD 1.08% p.a.,        |
| Class NC 1.60% p.a.,        | Class NDQ 1.60% p.a.,       |
| Class PFDQ 1.63% p.a.,      | Class TFC 0.54% p.a.,       |
| Class TFD 0.59% p.a.,       | Class GBP CH RD 0.65% p.a., |
| Class GBP DH RD 0.65% p.a., | Class GBP IDH 0.45% p.a.,   |
| Class SEK LCH 1.11% p.a.,   | Class USD FCH 0.65% p.a.,   |
| Class USD LCH 1.11% p.a.,   | Class USD TFCH 0.64% p.a.   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of:

|                              |                              |
|------------------------------|------------------------------|
| Class CHF LCH 0.023% p.a.,   | Class FC 0.028% p.a.,        |
| Class FD 0.024% p.a.,        | Class IC 0.024% p.a.,        |
| Class LC 0.024% p.a.,        | Class LD 0.024% p.a.,        |
| Class NC 0.024% p.a.,        | Class NDQ 0.024% p.a.,       |
| Class PFDQ 0.020% p.a.,      | Class TFC 0.023% p.a.,       |
| Class TFD 0.023% p.a.,       | Class GBP CH RD 0.023% p.a., |
| Class GBP DH RD 0.021% p.a., | Class GBP IDH 0.024% p.a.,   |
| Class SEK LCH 0.023% p.a.,   | Class USD FCH 0.023% p.a.,   |
| Class USD LCH 0.024% p.a.,   | Class USD TFCH 0.024% p.a.   |

of the fund's average net assets in relation to the respective share class.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 148.23.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

|  |            |                       |
|--|------------|-----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year . . . . .</b> |            |                       |
|  | <b>EUR</b> | <b>107 969 591.19</b> |
| 1. Distribution for the previous year / Interim distribution . . . . .                 | EUR        | -197 348.64           |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.54% of all transactions. The total volume was EUR 1 636 678.81.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest Global High Yield Corporates

### Investment objective and performance in the reporting period

The bond sub-fund seeks to generate above-average returns that exceed the benchmark (ICE BofA ML Non Financial Developed Markets High Yield Constrained hedged USD). To attain this objective, it invests worldwide primarily in corporate bonds with non-investment-grade status at the time of acquisition. It may also invest in equities, share certificates and dividend rights. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund DWS Invest Global High Yield Corporates recorded an appreciation of 12.1% (USD FC share class; BVI method) in the last twelve months through the end of December 2023, but was thus behind its benchmark, which returned +13.6% (both percentages in U.S. dollars).

### Investment policy in the reporting period

In line with its investment policy, the portfolio management concentrated its investments on corporate bonds from the non-investment-grade segment, i.e., high-yield bonds. In terms of its regional allocation, the investment focus remained on issues from the United States. In addition, high-yield bonds from Europe, Canada, the United Kingdom and the emerging markets were added to the portfolio.

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in

most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In 2023, the global market for high-yield bonds generated high total returns as the expected recession did not materialize. Investor confidence was also bolstered by falling inflation, the leveling out of interest rates and the expectation that the central banks would be able to achieve an economic “soft landing” and avoid a deeper recession.

In the context of sector allocation, the sub-fund benefited from its overweighting in the leisure segment and from the market participants’ expectation that the demand for travel would remain high due to the relaxation of the Covid restrictions. In addition, its overweighting in the cable and satellite sectors was beneficial, buoyed by the market participants’ expectation that these corporate bonds would be less exposed to inflation risks. In contrast, the sub-fund’s underweighting in the retailing, cyclical consumer goods and industrials segments that recorded above-average performance in the reporting period had a negative impact on its appreciation.

Higher risk bonds with a CCC rating recorded above-average positive performance as 2023 progressed, as did low-rated dollar bonds of distressed loans. However, the sub-fund had a low weighting in these bonds, which had a negative impact on its performance in the reporting period. This was partially mitigated by the sub-fund’s overweighting in bonds with a B rating and favorable bond selection in the context of bonds with a BB rating.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (“SFDR”).

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
ICE BofA Non-Financial Developed Markets High Yield Constrained (4PM) USD (11 2023 - 27 2 2023)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 66.329 |
| Highest market risk exposure ..... | % | 99.450 |
| Average market risk exposure ..... | % | 92.948 |

The values-at-risk were calculated for the period from January 1, 2023, through February 27, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

## DWS Invest Global High Yield Corporates

### Composition of the reference portfolio (according to CSSF circular 11/512)

ICE BofA Non-Financial Dev Markets High Yield Constrained 100% USD hedged (February 28, 2023 - December 31, 2023)

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 91.314  |
| Highest market risk exposure | % | 104.915 |
| Average market risk exposure | % | 97.440  |

The values-at-risk were calculated for the period from February 28, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 37 095 662.51 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                            |
|-----------------------------|----------------------------|
| Class CHF ICH50 0.44% p.a., | Class CHF XCH 0.31% p.a.,  |
| Class FCH 0.81% p.a.,       | Class ICH 0.55% p.a.,      |
| Class TFCH 0.79% p.a.,      | Class XCH 0.32% p.a.,      |
| Class GBP TFDQH 0.80% p.a., | Class USD FC 0.78% p.a.,   |
| Class USD IC 0.53% p.a.,    | Class USD IC50 0.41% p.a., |
| Class USD LD 1.22% p.a.,    | Class USD TFC 0.74% p.a.,  |
| Class USD XC 0.28% p.a.     |                            |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

## DWS Invest Global High Yield Corporates

---

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Global Infrastructure

### Investment objective and performance in the reporting period

DWS Invest Global Infrastructure seeks to achieve sustained capital appreciation. In order to achieve this, the sub-fund invests primarily in equities of issuers whose activities are focused on the global infrastructure segment. The infrastructure segment includes transport, energy, water and communication, in addition to social infrastructure. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\* In the fiscal year from January 1 through December 31, 2023, the sub-fund recorded a depreciation of 2.5% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

Global infrastructure securities underperformed the broader equity market, as measured by the MSCI World Index, as a backdrop of higher interest rates prevailed for much of 2023. The higher rate environment weighed on some of the more interest rate-sensitive infrastructure sub-sectors, such as utilities and communication.

Broadly speaking, most asset classes exceeded expectations for the year given that the U.S. (and other parts of the globe) were widely expected to enter a recession, yet it was still a volatile year for risk assets. Global equities posted solid gains, largely thanks to strong advances by a number of tech stocks through the end of the year. Central banks were mostly tightening, but then

appeared to be loosening the reins a little toward the end of the year. Longer-term interest rates generally headed higher in both real and nominal terms, causing some damage in the process, but they began to relent in the final two months of the year. The U.S. survived a short-lived banking crisis, a debt ceiling standoff, and intense political bickering on how to draft a budget. The expected economic recovery in China did not materialize despite several fiscal support measures. In fact, the economy actually contracted in some areas. The Russia-Ukraine conflict persisted without either side gaining any real advantages. The conflict in the Middle East flared up again later in the year.

Against this backdrop, global infrastructure significantly underper-

formed the MSCI World. Infrastructure climbed early in 2023, hitting its high for the year in early February, before succumbing to surging interest rates. As rates began to retrace in March on economic growth concerns and a brief banking crisis, infrastructure stocks found their footing and started to rise again. After the infrastructure sector had fluctuated back and forth between positive and negative territory during much of the spring and summer, it fell again as interest rates rose again. Yields on 10-year U.S. government bonds climbed by more than 100 basis points to around 5% from July to October. Infrastructure stocks found their low for the year in early October before rebounding sharply into year end. Overall, we were impressed with the resiliency of the broader economy in the

face of rising rates, yet it took a toll on some of the more interest rate-sensitive sectors, such as utilities and communication.

Infrastructure performance was mixed with gains in Europe, Japan and to a lesser extent Australia balanced by negative nominal returns in Asia and the Americas. In the Americas, transport was the best performing sector, comprised primarily of Latin America airports, as aviation exposed stocks globally enjoyed a strong rally early in the year, supported by continued robust passenger traffic. The midstream energy sector posted a modest gain in the reporting period. Fundamentals were solid and consolidation activity was brisk within the energy complex. Commodity prices provided a mixed lead with natural gas prices coming under pressure due to excess supply, and atypically mild weather while crude oil was whipsawed by OPEC+ actions and geopolitical worries. America's utility and communication sub-sectors both struggled as the challenging macro (rising interest rate) backdrop weighed on performance. In Europe, the transport sector had a strong start to the year, buoyed by improving global sentiment and solid traffic trends, as well as an improving macro outlook for the euro area. Communication and UK infrastructure stocks also recorded gains. Utility stocks on the Continent lagged regional peers but outpaced their Americas counterparts for the year. Finally, in Asia Pacific, Japan and Australia infrastructure stocks were steady, however Asia Ex Japan dropped as broader concerns over the Chinese

<sup>1</sup> Due to redemption of all shares by investors on May 4, 2021

economy sent stocks in the region sharply lower.

For the 12 months ending December 31, 2023, the sub-fund's relative performance was characterized by negative stock selection and negative sector allocation. In terms of allocation, the average underweight positions in the European transport and America's midstream energy sectors were the leading negative contributors during the reporting year, as both sectors turned in an above-average performance. This was partially balanced by the overweight position in Europe utilities, which also outperformed. Meanwhile, positive stock selection within the UK was more than offset by negative selection within the European utilities and America's midstream energy sectors. At the individual security level, the leading negative contributor was Danish offshore pure-play wind company Ørsted, as concerns over growth potential, rising interest rates and cost inflation were a headwind for much of the year. The decline accelerated in the second half of the year, particularly at the end of August, after Ørsted announced impairments on three offshore wind projects in the United States (Ocean Wind 1 in New Jersey, Sunrise Wind in New York and Revolution Wind in Connecticut).

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
DJ Brookfield Global Infrastructure Net total in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 97.936  |
| Highest market risk exposure | % | 109.930 |
| Average market risk exposure | % | 101.972 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

## DWS Invest Global Infrastructure

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\* Does not include positions with a negative balance, if such exist.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>3</sup> Annualization has not been performed for share classes launched during the year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 2 085 314.71.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

2023

|  |     |                 |            |                         |

## DWS Invest Global Infrastructure

---

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

## DWS Invest Global Real Estate Securities

### Investment objective and performance in the reporting period

DWS Invest Global Real Estate Securities invests mainly in equities of listed companies that own, develop or manage real estate, provided that these equities are considered transferable securities. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

In the fiscal year through December 31, 2023, DWS Invest Global Real Estate Securities recorded an appreciation of 11.3% per share (USD FC share class; BVI method; in U.S. dollars).

### Investment policy in the reporting period

Global Real Estate Securities delivered positive nominal returns for the 12 months ending December 31, 2023, but underperformed the broader market as measured by MSCI World.

Broadly speaking, most asset classes exceeded expectations for the year given that the U.S. (and other parts of the globe) were widely expected to enter a recession, yet it was still a volatile year for risk assets. Global equities posted solid gains, largely thanks to strong advances by a number of tech stocks through the end of the year. Central banks were mostly tightening, but then appeared to be loosening the reins a little toward the end of the year. Longer-term interest rates generally headed higher in both real and nominal terms, causing some damage in the process, but they

\*"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

began to relent in the final two months of the year. The U.S. survived a short-lived banking crisis, a debt ceiling standoff, and intense political bickering on how to draft a budget. The expected economic recovery in China did not materialize despite several fiscal support measures. In fact, the economy actually contracted in some areas. The Russia-Ukraine conflict persisted without either side gaining any real advantages. The conflict in the Middle East flared up again later in the year.

Real estate securities recorded solid gains for the year, but still lagged behind the broader equity market meaningfully. Real estate started the year on a positive note,

rising swiftly through January before hawkish comments from central banks, rising interest rates, and a short-lived banking crisis sent them downward in February and March. While there was some recovery by the time July ended, real estate securities found new lows in October, which nearly coincided with peak rates as the U.S. 10-year Treasury yield briefly surpassed 5%. Real estate securities ended a volatile year strongly as macro conditions turned in the sector's favor in November and December. Remarkably, the 10-year U.S. Treasury yield ended the year at within 1 basis point of where it was at the start of the year (3.87%), but it underwent extreme fluctuations over the

course of the year. At the regional level, real estate securities in Europe outperformed, while the Americas largely market performed, and Asia Pacific was the clear laggard. The United Kingdom and Continental Europe led gains for the period. In the UK, large caps outperformed their smaller niche counterparts by a decent margin. The best performer was Continental Europe, which surged into year-end as yields dropped on cooling inflation and amid expectations for interest rate cuts in 2024. In the Americas, data centers were a bright spot, as artificial intelligence (AI) euphoria provided a boost, along with regional malls, which outperformed as demand held firm and leasing remained robust. Hotels, industrial and self-storage were also good performers, recording double digit gains over the period. Conversely, net lease was the worst performer, as acquisition volumes were weak due to higher cost of capital. In Asia Pacific, market weakness weighed across Asia Ex Japan. Hong Kong in particular plunged on the unexpectedly slow economic recovery in China and difficult conditions in the commercial property market. Japan was mixed, with real estate development rising and REITs lagging. In Australia, stocks caught a bid into year-end amid expectations that major central banks were done hiking rates, along with signs of easing inflation locally.

For the twelve months ending December 31, 2023, the sub-fund's relative performance was strong, driven by positive stock selection. This was partially offset by bucket allocation, which had a modest

negative impact. Within the Americas, positive stock selection was the leading driver of outperformance, most notably within special real estate, health care, residential and data centers. On the flip side, bucket allocation in the Americas had a modest negative impact. The overweight to outperforming data centers was a bright spot, as industry-wide demand was at an all-time high. However, this was more than offset by the allocation to hotels, special real estate, self-storage, and residential, which had a negative impact. Outside the U.S., there were positive contributions from Continental Europe, Australia, and to a lesser extent Japan. Conversely, Asia Ex Japan and the United Kingdom had a minor negative impact for the period.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

## DWS Invest Global Real Estate Securities

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
FTSE EPRA Nareit Developed Index (Gross) in USD

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 92.320  |
| Highest market risk exposure | % | 105.320 |
| Average market risk exposure | % | 97.942  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                 |                                |
|---------------------------------|--------------------------------|
| Class CHF ICH(P)100 0.49% p.a., | Class CHF LDH (P) 1.63% p.a.,  |
| Class CHF TFCH (P) 0.88% p.a.,  | Class FC 0.86% p.a.,           |
| Class FD 0.86% p.a.,            | Class FDH (P) 0.89% p.a.,      |
| Class IC100 0.28% p.a.,         | Class LD 1.61% p.a.,           |
| Class GBP DH (P) RD 0.88% p.a., | Class USD FC 0.85% p.a.,       |
| Class USD FC100 0.51% p.a.,     | Class USD ID 0.67% p.a.,       |
| Class USD LC 1.61% p.a.,        | Class USD LDMH (P) 1.64% p.a., |
| Class USD TFC 0.86% p.a.        |                                |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to USD 283 697.92.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

# Annual report

## DWS Invest Gold and Precious Metals Equities

### Investment objective and performance in the reporting period

To achieve the highest possible appreciation of capital invested in U.S. dollars by investing globally in companies in the precious metals sector deemed to be promising.

In the fiscal year through December 31, 2023, the sub-fund recorded an appreciation of 3.6% per share (USD LC share class; BVI method; in U.S. dollars).

### Investment policy in the reporting period

At the start of the year, the price of gold picked up where it had left off in the previous year, and by the end of January it had risen to 1,928 U.S. dollars per ounce, its highest level since April 2022. Gold prices once again held firm and maintained their premium relative to real interest rates, despite hawkish commentary from the major central banks. The gold price declined in February. Although it gave back most of its gains from January, at 1,827 U.S. dollars per ounce, the price of gold at the end of the month stayed above the key psychological level of 1,800 U.S. dollars. Statements by the U.S. Federal Reserve (Fed) and the European Central Bank (ECB) hinted at a continuation of their respective hawkish stances. This led to a change in interest rate expectations, coupled with a strengthening U.S. dollar. In March, the gold price surged once again. The trend was supported by the brief banking crisis in the U.S., which gave rise to expectations of interest rate cuts and a weaker U.S. dollar. Other precious metals performed equally well during

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

March. The price of gold rose during the first half of April, and it briefly touched 2,040 U.S. dollars per ounce around mid-month before retreating, but it still closed the month with a slight gain. The next expiring gold futures traded at 1,990 U.S. dollars per ounce, just below the key psychological level of 2,000 U.S. dollars. Other precious metals performed well in April, particularly platinum, which, like other platinum group metals (PGMs), benefited from power outages and labor disputes in South Africa. The gold price rose in the first few days of May and briefly reached 2,050 U.S. dollars per ounce, but then it retreated and closed the month in negative territory. Other precious metals saw larger declines than gold in May, with the sell-off in palladium being the sharpest. All precious metals were weaker in June. The gold price initially appeared to trend sideways in the first half of June but then steadily fell as the month ended to close at roughly 1,920 U.S. dollars per ounce. Palladium continued its decline in June, and platinum and silver also lost value.

In July, precious metals recovered from the June sell-off despite the Fed raising the key interest rate again, taking them to their highest level since 2001. Gold prices came under strong downward pressure in August before recovering some ground and ending the month at just under 1,940 U.S. dollars per ounce. ETF holdings fell to their lowest level since 2020 as central banks, particularly the PBOC in China, continued to make heavy gold purchases. Platinum was boosted by supply-chain disruptions and solid demand, while palladium suffered from weak automotive demand and the potential for strikes at U.S. auto-makers. Silver held steady, supported by industrial use and future solar demand. In September, after a brief back-and-forth at the beginning of the month, the price of gold fell significantly to 1,850 U.S. dollars per ounce, its lowest level since March. The other precious metals also fell, with silver posting the biggest losses and palladium the only gainer. In October, the gold price rebounded as conflict broke out in Israel and

ended the month near 1,980 U.S. dollars per ounce, its highest level since May. Other precious metals performed similarly; in addition to gold, silver and platinum also rose. However, palladium was still weighed down by weak automotive industry demand, which is also linked to palladium being increasingly replaced by platinum in catalytic converters. Gold rose sharply in November and ended the month at 2,036 U.S. dollars per ounce. This was due to surprisingly low inflation data, which raised expectations that the Fed would end its cycle of interest rate hikes. This was confirmed de facto at the November meeting and caused government bond yields to fall. The U.S. dollar also weakened, driving the gold price even higher. Gold continued its upward trend in December, reaching an all-time-high closing price of 2,103 U.S. dollars per ounce toward the end of the month. This was the third consecutive month of gains, which resulted from a combination of several favorable factors. Silver, palladium and platinum also rose in December.

For the year as a whole, the performance of the precious metal complex was mixed for the individual metals. Gold rose, silver moved essentially sideways, platinum declined and palladium plummeted. Volatility was expected to continue across the board in the near term as the market was still trying to figure out when the current tightening cycle would transition into an easing cycle. Other factors included heightened geopolitical risks from the ongoing war in Ukraine and the escalating conflicts in the Middle East, as

well as the possibility of additional economic stimulus measures from the Chinese government to boost economic growth, which has been sluggish since the country reopened following the Covid lockdowns.

On average, the sub-fund held approximately 81% of its assets in gold mining stocks, approximately 9% in silver mining stocks, and approximately 5% in other precious metals and minerals stocks (including diamonds and PGMs).

The top performers in the reporting period were Harmony Gold Mining Co. Ltd. and Eldorado Gold Corporation. Harmony Gold Mining is a mining company specializing in gold extraction and exploration and operates mining projects in South Africa and Papua New Guinea. Its above-average performance was due to the overall higher gold price, as well as to an increase in the total gold extraction volume and the higher gold content in the deposits of its owner-operated mines. Eldorado Gold is a Canadian mining company specializing in the exploration and development of mines (mainly gold mines) in Canada, Turkey, Greece, China and Romania. The company also benefited from higher gold prices in the 2023 calendar year, as well as from higher production through operational modernization and from cost-cutting measures that reduced the cash cost of producing an ounce of gold relative to the previous year. The worst-performing companies in the reporting period were Impala Platinum Holdings Limited and Sibanye Stillwater Limited. Impala Platinum is a

holding company for a group of companies that operates platinum mines and mining sites for other PGMs. It recorded significant sales drops due to the lower price per ounce of metal sold as PGMs experienced a broad sell-off in 2023. Higher consolidation costs at certain companies and the weakening of the South African rand, their base currency, also had a negative impact. Sibanye Stillwater, also based in South Africa, is a mining and metals processing company that primarily extracts PGMs. It recognized impairments on some assets in the U.S. and in France in the reporting period, which weighed on investor sentiment. The company additionally suffered from generally lower PGM prices and a weaker rand.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-

related disclosures in the financial services sector was provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P BMI Gold and Precious Metals Gross Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                   |   |         |
|-----------------------------------|---|---------|
| Lowest market risk exposure.....  | % | 95.223  |
| Highest market risk exposure..... | % | 111.949 |
| Average market risk exposure..... | % | 102.775 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 398 760.59 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year, which are accounted for off the books. However, the current political situation makes it difficult to assess whether the dividend and interest payments by the Russian companies will be resumed at a later date.

### Statement of income and expenses (incl. income adjustment)

for the period from January 1, 2023, through December 31, 2023

|  |            |                      |
|--|------------|----------------------|
| <b>I. Income</b>   |            |                      |
| 1. Dividends (before withholding tax) . . . . .                                  | USD        | 10 488 119.38        |
| 2. Interest from investments of liquid assets (before withholding tax) . . . . . | USD        | 573 266.20           |
| 3. Deduction for foreign withholding tax . . . . .                               | USD        | -1 926 666.70        |
| 4. Other income . . . . .  | USD        | 81.01                |
| <b>Total income . . . . .</b>  | <b>USD</b> | <b>9 134 799.89</b>  |
| <b>II. Expenses</b>  |            |                      |
| 1. Management fee . . . . .  | USD        | -6 408 322.35        |
| thereof:   |            |                      |
| Basic management fee . . . . .   | USD        | -6 376 316.73        |
| Administration fee . . . . .   | USD        | -32 005.62           |
| 2. Depository fee . . . . .  | USD        | -28 155.78           |
| 3. Auditing, legal and publication costs . . . . .                               | USD        | -40 824.62           |
| 4. Taxe d'abonnement . . . . .   | USD        | -210 311.13          |
| 5. Other expenses . . . . .  | USD        | -387 935.14          |
| <b>Total expenses . . . . .</b>  | <b>USD</b> | <b>-7 075 549.02</b> |
| <b>III. Net investment income . . . . .</b>                                      | <b>USD</b> | <b>2 059 250.87</b>  |
| <b>IV. Sale transactions</b>   |            |                      |
| Realized gains/losses . . . . .  | USD        | -7 121 057.49        |
| <b>Capital gains/losses . . . . .</b>  | <b>USD</b> | <b>-7 121 057.49</b> |
| <b>V. Net gain/loss for the fiscal year . . . . .</b>                            | <b>USD</b> | <b>-5 061 806.62</b> |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                          |
|--------------------------|--------------------------|
| Class FC 0.89% p.a.,     | Class LC 1.64% p.a.,     |
| Class LD 1.64% p.a.,     | Class NC 2.34% p.a.,     |
| Class TFC 0.88% p.a.,    | Class USD LC 1.63% p.a., |
| Class USD TFC 0.88% p.a. |                          |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 564 580.63.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

# Annual report

## DWS Invest Latin American Equities

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Latin American Equities focuses its investments on companies which have their registered offices in Latin America or conduct their business activities predominantly in Latin America. In the reporting period from January 1 through December 31, 2023, the sub-fund achieved an appreciation of 27.1% per share (LC share class; BVI method). Its benchmark, the MSCI EM Latin America 10/40, rose 27.8% in the same period (both percentages in euro terms).

### Investment policy in the reporting period

2023 was a year full of surprises and volatility in both the equity and the fixed-income markets, with investor sentiment swinging back and forth, driven by expectations on the U.S. Federal Reserve (Fed), geopolitical tensions and China's attempts to get out of its deflationary spiral. The markets in Latin America, particularly Brazil and Mexico, were among the positive surprises. They benefited from institutional stability, a relatively calm geopolitical situation, easing inflation, upward growth revisions and the start of a cycle of monetary easing. Against this backdrop, the sub-fund, too, was able to achieve significant appreciation in the reporting period. In the United States, the "Magnificent 7" tech stocks and the sheer unbridled demand for AI helped the S&P defy fears of recession, interest rate hikes by the Fed, an incipient banking crisis and the grotesque antics in Washington. The year ended with a strong

As of: December 31, 2023

global rally as declining inflation in many industrial and emerging-market countries combined with signs of a soft landing in the U.S. and pronounced bear-market positioning to push up stock and bond prices. Following a painful three-month decline in various asset classes, the rally took hold in December when the Fed signaled a clear change in direction toward an expansive monetary policy. Ten-year U.S. Treasury yields fell to below 4% after having touched the 5-percent mark in mid-October for the first time since 2007. That had been the steepest rise since 1982 and was sparked by doubts about the sustainability of the U.S. budget. Chinese stocks were among the big disappointments of 2023. They were weighed down by lower-than-expected GDP growth, a weaker labor market, an ailing real estate sector,

strained relations with the U.S. and President Xi's apparent focus on national security at the expense of growth. Half-hearted economic stimulus measures failed to revive demand and sentiment, and an attempted exit from the deflationary debt spiral was not successful. The entire commodity complex recorded a decline in the reporting year, giving more support to global deflationary trends. Gold and uranium were among the few winners. The price of oil essentially trended sideways. The price of Brent crude oil hovered around 80 U.S. dollars per barrel as the impact of OPEC+ production cuts and the Middle East war was offset by demand concerns.

Brazilian equities were one of the global standouts in 2023. The market hit a new all-time high just before the turn of the

year, boosted by falling interest rates and S&P's upgrade of the country's sovereign rating. In its rationale for the rating action, the agency stated that the fundamental tax reform would make an important contribution to longer-term productivity gains. Brazil's strong performance was underpinned by a broad reduction in political risk, solidity of the institutional framework, sharply decelerating inflation, GDP growth upgrades, favorable investor positioning, historically attractive valuations, and the Brazilian Central Bank (BCB) cutting the Selic interest rate from 13.75% to 11.75% between August and December. Despite being confronted by aggressive populist rhetoric from re-elected President Lula da Silva at the beginning of the year, which included calls for easing steps, BCB president Campos Neto and finance minister Haddad remained undeterred and stuck to their convictions. The BCB reaffirmed its independence and kept its key interest rate high through August, while Haddad pushed through parliament a much-needed, long-promised fiscal framework to reset inflation expectations. GDP growth was revised upward during 2023. Contributing factors included a positive supply shock in agriculture, the lowest unemployment rate since 2015, the stability of the Brazilian real and a decline in inflation to 4.62%, which was finally within the BCB's target range. After decades of trying, Brazil's Congress finally adopted the first phase of tax reform in December. So far, the government has stuck to its stated goal of a zero budget deficit and is not inter-

fering with this new budget policy anchor.

Another country that attracted attention in 2023, leaving even Brazil behind, was Mexico. The most important performance driver was the investment thesis on the nearshoring trend, which found increasing acceptance in the markets and also began to be reflected in the economic data. Mexico's relatively solid balance of trade and stable fiscal position, as well as a strong currency, easing inflation and peaking interest rates, made for an overall supportive environment. Mexico's central bank (Banxico) raised the key interest rate in two steps in the first quarter to the current level of 11.25%. Since then, the key interest rate has remained unchanged, and Mexico is the only country in the region that has not initiated a cycle of interest rate cuts. On the political level, Claudia Sheinbaum, the Morena party's candidate to succeed President López Obrador, is the clear favorite according to polls, even though the opposition has fielded a strong presidential candidate in Senator Xóchitl Gálvez. The upcoming elections gave rise to fears of a possible shift away from fiscal discipline, with the draft 2024 budget heading for a primary deficit of 1.2%. Remittances from Mexicans living abroad to their homeland in 2023 are expected to exceed 60 billion U.S. dollars, roughly 4% of Mexico's GDP. In addition, over 29 billion U.S. dollars in foreign direct investment flowed into the country in the first half of 2023. That is an increase of 41% year over year (excluding non-recurring items) and provides

further evidence of the long-term nearshoring trend. Year-over-year GDP growth of 3.3% in the third quarter beat expectations, driven by strong exports to the U.S. and robust consumer spending. The "formalization" of the labor market continues. Formal jobs reached an all-time high of 22.4 million in November, and a 20% increase in the minimum wage was announced for 2024.

The Andean markets recovered in 2023 from the previous year's political turmoils. They fought inflation with varying degrees of success, worried about El Niño and complained about a lack of economic tailwind from China and the commodity sector. As a regional latecomer, Chile struggled to make a small gain. The Central Bank of Chile (BCCCh) launched the interest rate cutting campaign in Latin America at the end of July in the hope of boosting the weak economy, particularly in the mining sector, after President Boric's government announced a new lithium mining policy. Chileans voted against another draft constitution by a majority of 55% to 44%. After a prolonged sell-off in the third quarter, the Chilean peso recovered; there were also signs of improvement in GDP growth. High single-digit growth was achieved in Colombia. The country defied stubborn inflation, the legal woes surrounding President Petro and weak oil prices, as the failure of populist reform plans and the slight improvement in the fiscal situation were received positively by investors. Colombia's central bank (Banrep) finally joined the cycle of monetary easing in the region with a cautious 25-basis-point

interest rate cut. The conservative opposition won a clearer victory than expected in the local elections. The strongest Andean country was Peru after anti-government protests there peaked in January. Some political calm returned in the aftermath, allowing investors to focus on falling inflation, interest rate cuts by the Central Reserve Bank of Peru (BCRP) and a recovery in copper production. Finally, Argentina reappeared on the radar after the libertarian populist Javier Milei won the presidency with a mandate to give the economy a dose of shock therapy and – hopefully – free the country from its self-inflicted fiscal and monetary policy misery.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI EM Latin America 10/40 Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 92.460  |
| Highest market risk exposure | % | 118.480 |
| Average market risk exposure | % | 98.620  |

## DWS Invest Latin American Equities

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 37 242.26 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>V. Net gain/loss for the fiscal year</b> .....                            | <b>EUR</b> | <b>62 239 476.37</b> |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                          |
|--------------------------|--------------------------|
| Class FC 0.94% p.a.,     | Class FC50 0.39% p.a.,   |
| Class IC 0.54% p.a.,     | Class LC 1.83% p.a.,     |
| Class NC 2.48% p.a.,     | Class TFC 0.94% p.a.,    |
| Class GBP IC 0.53% p.a., | Class USD IC 0.54% p.a., |
| Class USD LC 1.83% p.a., | Class USD TFC 0.83% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 588 587.68.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest Low Carbon Corporate Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Low Carbon Corporate Bonds seeks to generate an above-average return. To this end, it invests in interest-bearing debt securities issued by companies worldwide that are very low carbon emitters, as well as in corporate issuers that are transitioning to low-carbon operations. The objective of reducing carbon emissions in view of achieving the long-term global warming objectives of the Paris Agreement adopted under the United Nations Framework Convention on Climate Change is thus an integral part of the fund concept. At least 70% of the sub-fund's assets are invested worldwide in interest-bearing securities that have an investment-grade rating at the time of the acquisition.\*

The sub-fund DWS Invest Low Carbon Corporate Bonds recorded an appreciation of 8.2% per share (LD share class; BVI method) in the last twelve months through the end of December 2023 and thus outperformed its benchmark, which returned +7.5% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in

As of: December 31, 2023

market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in par-

ticular posted significant returns as their risk premiums narrowed significantly.

As of the reporting date, the sub-fund focusing on corporate bonds (including bonds issued by financial services providers) was almost fully invested. Most of the issues contained in the bond portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) at the end of December 2023. In terms of its regional allocation, the investment focus was on interest-bearing instruments from the United States and Europe.

In 2023, the sub-fund benefited from its focus on companies with low carbon emissions. The largest positive contributions to performance in line with this investment strategy were made by the financial services provider, health care and telecommunications sectors. In addition, the increase in investments in the real estate sector in the reporting period as well as

the slight underweighting of the banking sector at the beginning of the regional bank crisis in the United States in the first quarter of 2023 both had a favorable effect on the performance of the sub-fund. In contrast, the underweighting of corporate bonds from the construction materials industry (cement) and from the consumer goods sector had a slightly negative impact on the appreciation of the sub-fund DWS Invest Low Carbon Corporate Bonds.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Solactive ISS Paris Aligned Select Euro Corporate IG Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 76.573  |
| Highest market risk exposure | % | 126.590 |
| Average market risk exposure | % | 105.689 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 12 796 949.86 as of the reporting date.

### Market abbreviations

#### Futures exchanges

# DWS Invest Low Carbon Corporate Bonds

DB = Deutsche Bank AG Frankfurt

## Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Deutsche Bank AG, Royal Bank of Canada (UK) and State Street Bank International GmbH.

## Exchange rates (indirect quotes)

As of December 29, 2023

|               |     |            |   |     |   |
|---------------|-----|------------|---|-----|---|
| British pound | GBP | 0.869326   | = | EUR | 1 |
| Japanese yen  | JPY | 156.635029 | = | EUR | 1 |
| U.S. dollar   | USD | 1.107000   | = | EUR | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

| <b>Total expenses . . . . .</b>  | <b>EUR</b> | <b>-401 460.45</b>   |  |
| <b>III. Net investment income . . . . .</b>                                      | <b>EUR</b> | <b>992 471.89</b>    |  |
| <b>IV. Sale transactions</b>   |            |                      |  |
| Realized gains/losses . . . . .  | EUR        | -2 735 657.59        |  |
| <b>Capital gains/losses . . . . .</b>  | <b>EUR</b> | <b>-2 735 657.59</b> |  |
| <b>V. Net gain/loss for the fiscal year . . . . .</b>                            | <b>EUR</b> | <b>-1 743 185.70</b> |  |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 5 484.34.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                           |
|--------------------------|---------------------------|
| Class FC 0.74% p.a.,     | Class FD 0.74% p.a.,      |
| Class LD 1.08% p.a.,     | Class TFD 0.73% p.a.,     |
| Class XD 0.28% p.a.,     | Class USD LDH 1.11% p.a., |
| Class USD XCH 0.33% p.a. |                           |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given reporting period.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 11 177.34.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

## Details on the distribution policy\*

### Class FC

The income for the fiscal year is reinvested.

### Class FD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.81      |

### Class LD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.50      |

### Class TFD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 1.83      |

### Class XD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 2.22      |

### Class USD LDH

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | USD      | 1.56      |

### Class USD XHC

The income for the fiscal year is reinvested.

\* Additional information is provided in the sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

## DWS Invest Low Carbon Corporate Bonds

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 3.27% of all transactions. The total volume was EUR 4 414 356.37.

# Annual report

## DWS Invest Metaverse

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest Metaverse launched on February 15, 2023, is to generate long-term capital appreciation. To achieve this objective, the sub-fund invests predominantly in equities of companies that will benefit from the development of the digital world, especially the metaverse, or are currently connected with this. They include enterprises that provide computing power and virtual content for the metaverse (digital, virtual space), as well as companies that offer devices such as hardware and wearables for the virtual world and new digital payment methods (cryptocurrencies, digital lending).

From its inception (February 15, 2023) through the end of December 2023, the sub-fund DWS Invest Metaverse recorded an appreciation of 13.2% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

Among other things, the portfolio management invested in equities of companies whose business benefits from or is connected to the development of the digital world, particularly the metaverse.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially

| Class XC    | LU2576371822 | 14.4%                        |

<sup>1</sup> Classes FC, LC, LD, TFC and XC launched on February 15, 2023

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 31, 2023

led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic

slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

Investments in the sub-fund portfolio focused in particular on the information technology and communication services sector. In following this strategy, the sub-fund participated in the above-average price increases in these sectors. Consumer discretionary and health care likewise had a positive impact on sub-fund performance.

In terms of country allocation, the sub-fund benefited in particular from its positioning in the U.S. However, investments in China, Japan, Singapore and France underperformed expectations. In terms of stock selection, the sub-fund's investments enabled it to especially benefit from noticeable

price gains at Nvidia, Meta Platforms and Adobe, while Square Enix, PayPal and JD.com lagged behind expectations. The position in Nvidia, for example, was boosted by stronger demand for graphics cards driven by advances in artificial intelligence. Meta Platforms also helped drive up performance on the back of its restructuring programs and a buoyant advertising business, particularly in late 2023.

During the year, the portfolio management realized some price gains in information technology stocks and made some new purchases in the communication services sector. These included the purchase of Take-Two Interactive, which in December 2023 presented its new trailer for the long-awaited game GTA 6, and the acquisition of Nintendo, known for its game console and proprietary game titles.

### Composition of the reference portfolio (according to CSSF circular 11/512)

50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI World Communication Services Index (Net) in EUR, 15% MSCI All Country World Index, in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 76.521  |
| Highest market risk exposure ..... | % | 119.386 |
| Average market risk exposure ..... | % | 92.941  |

The values-at-risk were calculated for the period from February 15, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

| Hong Kong dollar ..... | HKD | 8.650489   | = EUR | 1 |
| Japanese yen .....     | JPY | 156.635029 | = EUR | 1 |
| U.S. dollar .....      | USD | 1.107000   | = EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>V. Net gain/loss for the fiscal year</b> .....                               | <b>EUR</b> | <b>-46 456.34</b> |  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                                |
|-------------------------------|--------------------------------|
| Class FC 0.80% <sup>1</sup> , | Class LC 1.56% <sup>1</sup> ,  |
| Class LD 1.58% <sup>1</sup> , | Class TFC 0.81% <sup>1</sup> , |
| Class XC 0.40% <sup>1</sup>   |                                |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 3 185.67.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

|   | Class LD  | EUR | -            |
|   | Class TFC | EUR | -            |
|   | Class XC  | EUR | -            |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Multi Opportunities

### Investment objective and performance in the reporting period

DWS Invest Multi Opportunities seeks to generate above-average returns. To achieve this objective, the sub-fund invests in equities, interest-bearing securities, certificates such as share, bond and index certificates, investment funds, derivatives, convertible and warrant-linked bonds whose warrants are on securities, warrants for securities, participation and dividend-right certificates, as well as in money market instruments and cash. The portfolio manager weights these asset classes in the sub-fund portfolio based on its assessment of the market situation and can, if necessary, invest all of the sub-fund assets in one of these categories. At least 25% of the assets are invested in investment funds such as equity, mixed, pension and money market funds. Furthermore, the investment policy is also implemented through the use of suitable derivatives (financial instruments whose value depends on the performance of one or more underlyings, e.g., a security). When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

In the reporting period from the beginning of January through the end of December 2023, the sub-fund recorded an appreciation of 7.2% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

On the equity side, the portfolio management mainly invested in industrial countries, especially in Europe and the United States. In terms of sector allocation, the equity portfolio was generally broadly diversified. In its bond investments, the sub-fund was globally positioned in the report-

ing period. In terms of issuers, the portfolio management invested in corporate bonds and high-yield bonds, among others.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic

competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity mar-

kets even closing with perceptible losses. On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In relation to its positions in opportunity-oriented asset classes, the portfolio management maintained its preference for equities over bonds; the sub-fund's investments in the reporting period recorded a positive performance overall.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
60% MSCI All Country World Net TR Index - in EUR, 40% iBoxx Euro Overall Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 55.933 |
| Highest market risk exposure ..... | % | 95.748 |
| Average market risk exposure ..... | % | 73.143 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 107 174 661.19 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                            |
|-----------------------------|----------------------------|
| Class AUD LCH 1.31% p.a.,   | Class AUD LDMH 1.28% p.a., |
| Class RMB LDMH 1.31% p.a.,  | Class FC 0.73% p.a.,       |
| Class FD 0.72% p.a.,        | Class LC 1.27% p.a.,       |
| Class LD 1.28% p.a.,        | Class LDQ 1.27% p.a.,      |
| Class NC 1.78% p.a.,        | Class NDQ 1.77% p.a.,      |
| Class PFC 2.16% p.a.,       | Class PFDQ 1.52% p.a.,     |
| Class TFC 0.73% p.a.,       | Class TFD 0.69% p.a.,      |
| Class GBP CH RD 0.76% p.a., | Class HKD LDMH 1.30% p.a., |
| Class SEK LCH 1.30% p.a.,   | Class SGD LDMH 1.32% p.a., |
| Class USD FCH 0.80% p.a.,   | Class USD LCH 1.30% p.a.,  |
| Class USD LDMH 1.30% p.a.,  | Class USD RDMH 0.57% p.a., |
| Class USD TFCH 0.76% p.a.   |                            |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                              |                             |
|------------------------------|-----------------------------|
| Class AUD LCH 0.004% p.a.,   | Class AUD LDMH 0.007% p.a., |
| Class RMB LDMH 0.006% p.a.,  | Class FC 0.006% p.a.,       |
| Class FD 0.005% p.a.,        | Class LC 0.006% p.a.,       |
| Class LD 0.005% p.a.,        | Class LDQ 0.006% p.a.,      |
| Class NC 0.006% p.a.,        | Class NDQ 0.006% p.a.,      |
| Class PFC 0.005% p.a.,       | Class PFDQ 0.006% p.a.,     |
| Class TFC 0.005% p.a.,       | Class TFD 0.010% p.a.,      |
| Class GBP CH RD 0.005% p.a., | Class HKD LDMH 0.006% p.a., |
| Class SEK LCH 0.005% p.a.,   | Class SGD LDMH 0.005% p.a., |
| Class USD FCH 0.002% p.a.,   | Class USD LCH 0.005% p.a.,  |
| Class USD LDMH 0.006% p.a.,  | Class USD RDMH 0.006% p.a., |
| Class USD TFCH 0.003% p.a.   |                             |

of the fund's average net assets in relation to the respective share class.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 50 248.45.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

| <b>I. Value of the fund's net assets at the beginning of the fiscal year . . . . .</b> |     | <b>EUR</b>     | <b>334 458 409.17</b> |
|--|-----|----------------|-----------------------|
| 1. Distribution for the previous year / Interim distribution . . . . .                 | EUR | -3 752 391.54  |                       |
| 2. Net outflows <sup>2</sup> . . . . .   | EUR | -57 270 525.54 |                       |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 19 254.01.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

# Annual report

## DWS Invest Multi Strategy (in liquidation)

### Investment objective and performance in the reporting period

The objective of the investment policy was to generate sustained capital appreciation. To this end, the sub-fund invested globally in interest-bearing securities, equities, convertible bonds, warrant-linked bonds whose underlying warrants are on securities, participation and dividend right certificates, investment funds and derivatives, as well as in money market instruments, deposits and cash. The sub-fund's investments in the above assets were each permitted to account for up to 100% of the sub-fund's assets. Investments in participation and dividend-right certificates were limited to 35% of the sub-fund's assets, and investments in investment funds were limited to 10%. Derivatives could be used for hedging and investment purposes. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.

In the reporting period from January 1, 2023, through to its liquidation on December 4, 2023, the sub-fund recorded an appreciation of 0.7% per share (FC share class; in euro; BVI method).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 14, 2023 (liquidation date)

China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the eas-

ing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The entire portfolio management was retained in accordance with the investment strategy. During the liquidation process, the sub-fund's portfolio – including individual instruments as well as derivatives – was gradually sold/offset and the proceeds were invested in cash.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

## DWS Invest Multi Strategy (in liquidation)

### Composition of the reference portfolio (according to CSSF circular 11/512)

45% BBG Global Aggregate Corporate EUR Index, 35% MSCI World Net TR Index in EUR, 15% BBG Global High Yield Index, 5% JPM Morgan GBI-EM Index in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 0.005  |
| Highest market risk exposure | % | 69.637 |
| Average market risk exposure | % | 40.952 |

The values-at-risk were calculated for the period from January 1, 2023, through December 14, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.7, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Exchange rates (indirect quotes)

As of December 14, 2023 (liquidation date)

|                  |     |            |       |   |
|------------------|-----|------------|-------|---|
| British pound    | GBP | 0.869326   | = EUR | 1 |
| Japanese yen     | JPY | 156.635029 | = EUR | 1 |
| Singapore dollar | SGD | 1.461019   | = EUR | 1 |
| U.S. dollar      | USD | 1.107000   | = EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                               |
|-------------------------------|-------------------------------|
| Class FC 0.64% <sup>1</sup> , | Class FD 0.64% <sup>1</sup> , |
| Class LC 1.06% <sup>1</sup> , | Class LD 1.07% <sup>1</sup> , |
| Class XC 0.29% <sup>1</sup>   |                               |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 9.003.56.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

# Annual report

## DWS Invest Nomura Japan Growth

### Investment objective and performance in the reporting period

In the reporting period from the beginning of January 2023 through the end of December 2023, the sub-fund DWS Invest Nomura Japan Growth, which invests in equities of Japanese companies, achieved an appreciation of 30.4% per share (JPY FC share class; BVI method; in JPY).

### Investment policy in the reporting period

In the reporting period, the Japanese equity market, as measured by the TOPIX index (with dividends reinvested), advanced. The TOPIX achieved a double-digit percentage gain in the 2023 calendar year, helped by the weaker yen, strong economic growth compared with other industrial countries and burgeoning expectations from foreign investors that Japan might finally be emerging from deflation. Also acting as a positive catalyst was the Tokyo Stock Exchange's initiative calling for Japanese listed companies trading below book value (P/B less than 1) to disclose business plans outlining how management views this situation. This raised expectations in the market that corporate governance reforms might finally be gaining momentum, and that companies that normally hesitate on dividends and buybacks might become more shareholder-friendly.

In terms of investment style, the 2023 calendar year once again presented challenges for the sub-fund, as the Value Index outperformed the Growth Index for the third consecutive year. Based on the Russell/Nomura Growth and

As of: December 31, 2023

Value Indexes, the performance difference between value and growth stocks in the reporting year stood at 11.2%. Nevertheless, the portfolio management was able to compensate for this negative factor through its selection of investments. In retrospect, the decision to add equities such as Hitachi and Mitsubishi UFJ Financial Group to the portfolio during the year proved to be the right one, as both had a positive impact on the sub-fund's investment performance.

In the reporting period, both sector allocation and stock selection contributed positively to performance. As regards sector allocation, the sub-fund benefited especially from the overweight in electronic equipment and the underweight in the pharmaceutical sector.

In terms of stock selection, names such as Tokyo Electron (electric appliances), Renesas Electronics (electric appliances), Disco (machinery), Ibiben (electric appliances) and Shin-Etsu Chemical (chemicals) made positive contributions to the portfolio's performance. Taiyo Yuden (electrical appliances), M3 (services),

Sumitomo Metal and Mining (non-ferrous metals), Shiseido (chemicals) and the Sosei Group (pharmaceuticals) had an unfavorable impact on the sub-fund's investment performance.

The sector-weight allocations were a result of the bottom-up stock selection. Accordingly, the sub-fund management did not deliberately weight specific sectors based on sectoral views. The sub-fund remains structurally overweight in sectors such as electric appliances and machinery. The main reason why the portfolio is tilted toward these sectors stems from the sub-fund's investment philosophy of investing in highly competitive companies that are able to maintain their competitiveness and achieve high profit growth over the medium to long term. In context of the Japanese equity market, companies that possess strong competitiveness tend to be concentrated within export-oriented sectors such as electric appliances and machinery.

Looking at individual stocks, Tokyo Electron, one of the world's largest manufacturers of semiconductor production equipment (SPE), was one of the best. The SPE market

was in a correction phase in which incoming orders, capacity utilization and sales for thermal processing systems, vapor deposition systems and etching devices were expected to decline massively in the 2023 fiscal year. However, the portfolio management believed that the market had already priced in this trough of demand and that Tokyo Electron's share price could rise once the memory market situation improved. Caught up in the recent rally in generative artificial intelligence (AI), Tokyo Electron's share price rose sharply.

At the negative end, one of the worst performers was Taiyo Yuden. Taiyo Yuden produces electronic components such as ceramic capacitors and ferrite. The company focuses on high-end MLCCs and quickly pivoted its application mix to increase the share of automotive products. The industry saw the emergence of a new growth phase for MLCCs resulting from greater use of vehicle electronics and the modernization of IT infrastructure with broader use of AI and the Internet of Things (IoT). The portfolio management continued to believe that Taiyo Yuden was well-positioned to benefit from these trends, as the company had shifted its revenue mix and improved its competitive strength by bringing materials production back in-house. Even as share prices bottomed out overall, the stock remained weak throughout the year as inventory adjustments took longer than expected.

The position in Mitsubishi Corporation, one of Japan's largest trading conglomerates, was sold in 2023. Half of its earnings are attributable

to commodities, and half to its non-commodities business. The company's commodities arm is extremely competitive. Mitsubishi's coking coal business in Australia is the largest of its kind in the world, and the company has a high market share in the marine transportation of coking coal. Mitsubishi also owns high-quality copper mines in Chile and Peru. LNG is a major part of the energy business, and the company is active across the LNG value chain from natural gas extraction to liquefaction and transportation. Although the company is likely to see a decline in profits in the current fiscal year due to lower revenues in the commodities business, the portfolio management assumed that the Mitsubishi's share price would be somewhat supported by extensive share buybacks. However, it felt that all the good news and catalysts were almost fully priced in and therefore decided to take its gains on the stock.

A new position was established in Hitachi. Hitachi produces communication and electronic equipment, heavy electrical and industrial machinery and consumer electronics. The company's many diverse products range from nuclear power systems to kitchen appliances. In the last ten years, Hitachi has focused on consolidating and realigning its business portfolio. The portfolio management believes that Hitachi has finally completed its restructuring and is now entering a phase of sustained earnings growth accompanied by dividend distributions to shareholders. The company recently expanded its distribution policy and revised its cash utilization strategy to achieve a better bal-

ance between growth initiatives and shareholder returns. The portfolio management was convinced that Hitachi's ability to leverage the potential of its "Lumada" solutions across all business segments would be a key driver of profitable growth in the future. It is planned that Lumada sales should increase to 33% (adjusted EBITDA of 44%) by the 2025 fiscal year and thus improve the company's margins.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Tokyo Stock Price (TOPIX) Index - BRS only

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                   |   |         |
|-----------------------------------|---|---------|
| Lowest market risk exposure.....  | % | 85.657  |
| Highest market risk exposure..... | % | 128.499 |
| Average market risk exposure..... | % | 107.615 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled JPY 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class JPY FC 0.89% p.a.,                      Class JPY MFC 0.57% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to JPY 8 437 021.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was JPY 0.00.

# Annual report

## DWS Invest Qi Global Climate Action

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation. To this end, the net assets of the sub-fund were invested in equities of international issuers. When composing the portfolio, the sub-fund management also makes particular effort to ensure that the expected carbon intensity of the equity portfolio will be lower than that of the overall equity market. Aspects considered when selecting investments include a focus on environmental, social and corporate governance (ESG) standards. These aspects are an integral component of the investment strategy.\*

DWS Invest Qi Global Climate Action recorded an appreciation of 4.5% per share (LC share class; BVI method) in the reporting period from January 1, 2023, through the end of December, 2023. The MSCI World TR Net posted a gain of 19.6% in the same period (both percentages in euro). As of the last trading day, the sub-fund's carbon footprint was 69% lower than that of MSCI World.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes. The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest

rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

Following its strategy, the defensive sub-fund was not able to fully participate in the predominantly very positive performance of the market during the reporting period that cyclical positions benefited disproportionately from.

### Investment policy in the reporting period

The risk-reducing managed volatility strategy is implemented in the sub-fund. The strategy is based on a proprietary equity selection process. A core component of this quantitative process is a dynamic multi-factor approach to stock-picking that relies on a company database.

The objective of the investment strategy is to reduce risk compared with the market-capitalized MSCI World Index, which represents the investment universe. The reduced-volatility portfolio was invested on the basis of those

equities that were positively valued using the model approach to stock selection relative to the overall market or that could make a contribution to risk diversification.

The risk reduction sought in comparison to a market-capitalized index, i.e., compared to the MSCI World investment universe, resulted in underweightings in the cyclical sectors of finance, cyclical consumer goods and basic materials, as well as in an overweighting in the more defensive sectors of utilities, consumer staples and health care.
