**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 66.103 |
| Highest market risk exposure | % | 96.610 |
| Average market risk exposure | % | 72.602 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 215 897.77 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>442 490.51</b> |  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                      |                      |
|----------------------|----------------------|
| Class FC 0.91% p.a., | Class IC 0.59% p.a., |
| Class LC 1.78% p.a., | Class XC 0.48% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 4 228.22.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 29.57.

# Annual report

## DWS Invest SDG Corporate Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest SDG Corporate Bonds seeks to generate above-average returns. To this end, it invests predominantly in interest-bearing securities of corporate issuers (private and public-private issuers) worldwide that make a positive contribution to the United Nations Sustainable Development Goals (UN SDGs) or that finance special projects relating to environmental, social and corporate governance issues (ESG issues).<sup>\*</sup> At least 70% of the sub-fund's assets are invested worldwide in interest-bearing securities that have an investment-grade rating at the time of the acquisition. Derivatives may be used for investment purposes.

In the past twelve months through the end of December 2023, the sub-fund DWS Invest SDG Corporate Bonds recorded an appreciation of 9.3% per share (LC share class; in euros; BVI method).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

<sup>1</sup> Launched on March 31, 2022

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

With its investments, the portfolio management assured a balanced allocation across sectors of industry and rating categories. Foreign-currency positions were hedged through derivatives. Due to – what the portfolio manage-

ment considered to be – attractive interest rate premiums, bonds that had a BBB rating from the leading rating agencies were overweighted. Sustainability-linked bonds (SLBs – bonds from companies with medium-term targets in the ESG field) from the high-yield segment were added to the portfolio. Alongside green bonds, SLBs were the sub-fund's investment focus; however, the sub-fund was not immune to the developments on the volatile bond markets.

The positioning of the sub-fund at the end of the reporting period played a decisive role in its investment performance. In the fourth quarter of 2023, the allocation in the banking sector made a significant positive contribution to performance. The stock selection within the telecommunications and technology sectors also had a positive effect on the investment performance. In contrast, the cautious positioning in the real estate sector that recovered noticeably against the backdrop of the reducing interest rates at the end of 2023 had an adverse effect on the sub-fund's performance. The positioning in bonds of companies that produce non-cyclical consumer goods was, in hindsight,

too defensive. However, bonds that were rated below the threshold for investment-grade status contributed substantially to the sub-fund's investment gains.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |       |
|------------------------------------|---|-------|
| Lowest market risk exposure .....  | % | 2.001 |
| Highest market risk exposure ..... | % | 3.207 |
| Average market risk exposure ..... | % | 2.444 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 1333 228.89 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

| <b>Capital gains/losses .....</b>   | <b>EUR</b> | <b>-283 485.87</b> |             |
| <b>V. Net gain/loss for the fiscal year .....</b>                               | <b>EUR</b> | <b>22 173.85</b>   |             |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                      |
|-----------------------|----------------------|
| Class FC 0.50% p.a.,  | Class LC 0.63% p.a., |
| Class TFC 0.49% p.a., | Class XC 0.28% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 236.57.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 8.95% of all transactions. The total volume was EUR 3 462 418.29.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest SDG European Equities (in liquidation)

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest SDG European Equities (in liquidation) was to generate positive medium- to long-term investment performance. To achieve this, investments were preferably made in European companies that, according to the sub-fund management's assessment, benefited from present or future geopolitical, societal and economic trends and themes that made a positive contribution to the United Nations' Sustainable Development Goals (UN SDGs). Aspects considered when selecting investments included a focus on environmental, social and corporate governance (ESG) criteria. These aspects were of essential importance for the investment strategy.\*

In the reporting period from the start of January through October 24, 2023 (liquidation date), DWS Invest SDG European Equities (in liquidation) recorded an appreciation of 4.4% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

In addition to the U.S. exchanges that – boosted in particular by technology stocks in the face of growing interest in the topic of artificial intelligence – recorded strong price gains as measured by the S&P 500, the equity markets in the European industrial countries also posted appreciable price increases in the 2023 calendar year. For example, the German

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: October 24, 2023 (liquidation date)

equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Against this backdrop, the European equities contained in the portfolio also recorded noticeable price gains overall in the reporting period.

### Liquidation

The sub-fund DWS Invest SDG European Equities (in liquidation) was liquidated effective October 24, 2023, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective September 13, 2023. Investors could redeem sub-fund shares until September 13, 2023.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Europe Net TR in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 0.000   |
| Highest market risk exposure | % | 108.845 |
| Average market risk exposure | % | 84.710  |

The values-at-risk were calculated for the period from January 1, 2023, through October 24, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective October 24, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                               |
|--------------------------------|-------------------------------|
| Class FC 0.72% <sup>1</sup> ,  | Class LC 1.37% <sup>1</sup> , |
| Class TFC 0.72% <sup>1</sup> , | Class XC 0.37% <sup>1</sup>   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 676.98.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 98.60.

# Annual report

## DWS Invest SDG Global Equities

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average capital appreciation. To achieve this, the net assets of the sub-fund are predominately invested in securities of issuers that, according to the sub-fund management's opinion, benefit from present or future geopolitical, societal and economic trends and themes that make a positive contribution to fulfilling the United Nations Sustainable Development Goals (UN SDGs). At least 80% of the fund's assets are invested in equities that meet the above criteria. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.

In the twelve months through the end of December 2023, the sub-fund recorded an appreciation of 7.5% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

The global investment focus of the sub-fund was on equities that aim to post relevant revenue in the area of the United Nations Sustainable Development Goals (SDGs).

The international stock exchanges recorded appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited

As of: December 31, 2023

from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably

smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

The Russia/Ukraine crisis had a particularly strong negative effect on Europe. However, the price of gas in Europe bounced back during the reporting period and the euro was also able to appreciate against the U.S. dollar. In the reporting period, the sub-fund benefited from its investments in the utilities sector above all. Although the sector in general

faced difficulties, Veolia, for example, was able to benefit from the continued successful integration of the Suez acquisition. Companies with exposure to the housing market in the United States benefited from its robust performance. Although interest rates continued to rise during the reporting period, the construction activity for single- and multiple-family houses in the United States remained impervious to this. Companies such as Topbuild from the United States, which manufactures and sells insulation material, among other things, was able to benefit from this, as was Saint Gobain from France. Further, the sub-fund experienced positive effects from its investments in Eli Lilly, a pharmaceutical company that develops and sells products such as drugs for treating obesity and diabetes. In the education sector, Grand Canyon Education was compelling. The company supports universities across the entire student life cycle (with enrollment management, curriculum development and teacher acquisition, among other things).

In contrast, stocks with an exposure to renewable energy recorded below-average price performance. While rising interest rates and falling electricity prices in particular put pressure on stocks like Sunrun or Solaredge, Siemens Energy struggled with problems related specifically to the company. In the reporting period, Siemens Energy found significant defects on its wind turbines, and the subsequent write-downs and provisions squeezed profits. Companies that produce and sell sustainable alternatives to oil or

fuel also had weaker performance. For example, Darling Ingredients, a manufacturer of renewable diesel, had to contend with factors such as falling fuel and fat prices. Pfizer also recorded significant declines in price. The downturn in sales of COVID vaccinations had a negative effect.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

| Lowest market risk exposure .....  | % | 83.699  |
| Highest market risk exposure ..... | % | 108.277 |
| Average market risk exposure ..... | % | 95.290  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnote

\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                               |
|-------------------------------|-------------------------------|
| Class FC 0.82% p.a.,          | Class FD 0.81% p.a.,          |
| Class IC 0.53% p.a.,          | Class IC100 0.43% p.a.,       |
| Class IC250 0.38% p.a.,       | Class ID 0.53% p.a.,          |
| Class LC 1.57% p.a.,          | Class LD 1.57% p.a.,          |
| Class NC 2.07% p.a.,          | Class PFC 2.41% p.a.,         |
| Class TFC 0.82% p.a.,         | Class TFD 0.82% p.a.,         |
| Class XC 0.42% p.a.,          | Class GBP D RD 0.81% p.a.,    |
| Class USD IC50 0.48% p.a.,    | Class USD LCH (P) 1.60% p.a., |
| Class USD TFCH (P) 0.85% p.a. |                               |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>2</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 755 895.87.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest Short Duration Credit

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Short Duration Credit seeks to achieve sustained capital appreciation. As a bond sub-fund with a duration of zero to three years, it takes advantage of the interest rate and yield differentials of corporate bonds to comparable government bonds. The international credit markets constitute its investment universe. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund DWS Invest Short Duration Credit recorded an appreciation of 6.4% (LC share class; BVI method) in the last twelve months through the end of December 2023, therefore outperforming its benchmark, which returned +5.1% (both percentages in euro).

### Investment policy in the reporting period

The portfolio management continued to invest across various sectors in short-term corporate bonds and in bonds from financial services providers. Higher-yielding, subordinated issues were also selectively added. Regionally, the investment focus was on bonds from Europe and the United States. When selecting individual issues, the sub-fund placed its investment focus on issues with investment-grade ratings, i.e., bonds rated at least BBB- or better by the leading rating agencies. The sub-fund also included non-investment-grade names for yield

reasons, preferring securities from the top segment (BB rating).

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder

of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In 2023, most sectors made a positive contribution to the outperformance of the sub-fund, especially the overweightings in utility and

industrial companies. In addition, the higher weightings in subordinated bonds undertaken due to yield considerations and the overweighting in high-yield bonds were the main reasons for the better performance of the sub-fund DWS Invest Short Duration Credit in comparison with its benchmark.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |       |
|------------------------------------|---|-------|
| Lowest market risk exposure .....  | % | 0.708 |
| Highest market risk exposure ..... | % | 2.015 |
| Average market risk exposure ..... | % | 1.020 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 75 911 959.07 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                              |                       |
|------------------------------|-----------------------|
| Class FC 0.40% p.a.,         | Class IC 0.30% p.a.,  |
| Class IC50 0.24% p.a.,       | Class ID 0.30% p.a.,  |
| Class ID50 0.24% p.a.,       | Class LC 0.69% p.a.,  |
| Class LD 0.69% p.a.,         | Class NC 1.29% p.a.,  |
| Class PFC 0.97% p.a.,        | Class TFC 0.54% p.a., |
| Class TFD 0.24% <sup>2</sup> |                       |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                               |                        |
|-------------------------------|------------------------|
| Class FC 0.015% p.a.,         | Class IC 0.016% p.a.,  |
| Class IC50 0.015% p.a.,       | Class ID 0.018% p.a.,  |
| Class ID50 0.015% p.a.,       | Class LC 0.015% p.a.,  |
| Class LD 0.015% p.a.,         | Class NC 0.015% p.a.,  |
| Class PFC 0.014% p.a.,        | Class TFC 0.015% p.a., |
| Class TFD 0.004% <sup>2</sup> |                        |

of the fund's average net assets in relation to the respective share class.

<sup>2</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 039.41.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 81.10% of all transactions. The total volume was EUR 2 201 168 517.79.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Short Duration Income

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Short Duration Income seeks to generate above-average returns. To achieve this objective, it invests worldwide in bonds, money market instruments and liquid assets. At least 70% of the sub-fund's assets are invested in bonds with terms to maturity ranging from zero to three years. Up to 25% of the sub-fund's assets may be invested in convertible bonds, convertible debentures and warrant-linked bonds. Up to 20% may be invested in asset-backed or mortgage-backed securities. Derivatives may be used for investment purposes. All non-euro investments are largely hedged against exchange rate risks. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund DWS Invest Short Duration Income recorded an appreciation of 5.0% (LC share class; BVI method) in the last twelve months through the end of December 2023, therefore outperforming its benchmark, which returned +3.4% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The portfolio management invested globally in government bonds from the leading industrial countries as well as in securities of government

issuers from emerging markets. It also invested in corporate bonds and interest-bearing securities of financial services providers (financials). Mortgage bonds and covered bonds rounded out the portfolio. With regard to stock selection, the sub-fund predominantly placed its investment focus on issues with investment-grade ratings, meaning those rated BBB- or better by the leading rating agencies. Nevertheless, it also included non-investment-grade names for yield reasons, preferring securities from the top segment (BB rating). In anticipation of a narrowing of risk premiums, the proportion of bonds from the emerging markets was maintained at a high investment level in the reporting period; this primarily involved investments in government bonds and interest-bearing instruments of near-government issuers. Toward the end of the reporting period, this proportion was reduced and U.S. and German government bonds were successively acquired. The reasons for this were the weakened global economy and the increase in geopolitical risks that indicated that a more defensive position would be favorable.

The successful duration management (management of the interest rate sensitivities) was one of the reasons why the sub-fund performed better than its benchmark. Initially, the maturity structure of the portfolio shortened but it was gradually lengthened in comparison with the benchmark as 2023 progressed. The focus was placed on short-term securities (residual maturities of 1-3 years) in order to be able to benefit from potential

interest rate reductions by leading central banks in particular.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 0.749 |
| Highest market risk exposure | % | 1.184 |
| Average market risk exposure | % | 0.963 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 53 660 451.73 as of the reporting date.

## DWS Invest Short Duration Income

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are valued to a minor extent at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\* Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>2 915 632.93</b> |  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                             |                           |
|-----------------------------|---------------------------|
| Class CHF ICH25 0.31% p.a., | Class FC 0.56% p.a.,      |
| Class FD 0.58% p.a.,        | Class IC50 0.22% p.a.,    |
| Class ID50 0.22% p.a.,      | Class LC 0.73% p.a.,      |
| Class LD 0.74% p.a.,        | Class NC 1.29% p.a.,      |
| Class PFC 1.26% p.a.,       | Class TFC 0.57% p.a.,     |
| Class TFD 0.58% p.a.,       | Class USD FCH 0.59% p.a., |
| Class USD LCH 0.78% p.a.,   | Class USD TFCH 0.55% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 2 298.2.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

|  |     |                |            |                      |
|--|-----|----------------|------------|----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |     |                | <b>EUR</b> | <b>87 920 330.49</b> |
| 1. Distribution for the previous year  | EUR | -135 319.41    |            |                      |
| 2. Net outflows <sup>2</sup>   | EUR | -24 251 839.29 |            |                      |
| 3. Income adjustment   | EUR | 1 388 798.44   |            |                      |
| 4. Net investment income   | EUR | 1 526 350.39   |            |                      |
| 5. Realized gains/losses   | EUR | 1 389 282.54   |            |                      |
| 6. Net change in unrealized appreciation/depreciation                        | EUR | -805 670.95    |            |                      |
| <b>II. Value of the fund's net assets at the end of the fiscal year</b>      |     |                | <b>EUR</b> | <b>67 031 932.21</b> |

<sup>2</sup> Reduced by a dilution fee in the amount of EUR 5 329.66 for the benefit of the fund's assets.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 3.84% of all transactions. The total volume was EUR 4 625 797.58.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest StepIn Global Equities

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation and surpass the performance of the benchmark (MSCI World TR Net). To this end, the sub-fund invested in interest-bearing securities, convertible bonds, convertible debentures, warrant-linked bonds, investment funds, money market instruments or liquid assets at inception and pursued a monthly reallocation mechanism over a period of three years, which ultimately culminated in an equity target portfolio. At least 51% of the target portfolio is invested in equities of well-established, growth-oriented domestic and foreign companies. The fund management ensures a flexible weighting and, where necessary, additionally invests in fixed rate securities (for defensive purposes). During the three-year reallocation period, the percentage of the assets attributed to equities, equity-like securities, and equity derivatives increased and resulted in higher income as well as in higher risks. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance.

In the twelve months through the end of December 2023, the sub-fund recorded an appreciation of 12.5% per share (LC share class; BVI method). Its benchmark posted an appreciation of 19.6% in the same period (both percentages in euro terms).

### DWS Invest StepIn Global Equities

Performance of share classes vs. benchmark (in EUR)

| Share class | ISIN         | 1 year | 3 years | 5 years |
|-------------|--------------|--------|---------|---------|
| Class LC    | LU1532502512 | 12.5%  | 25.4%   | 56.8%   |
| Class NC    | LU1532502603 | 11.9%  | 23.7%   | 53.1%   |
| Class PFC   | LU1532502785 | 12.2%  | 24.4%   | 54.8%   |
| MSCI World  |              | 19.6%  | 37.7%   | 90.4%   |

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 31, 2023

### Investment policy in the reporting period

The sub-fund's overall portfolio comprised a basket of target funds. The equity portfolio, which most recently represented a share of 97.1% of total sub-fund assets, invested in the funds DWS Global Value, DWS Invest II Global Equity High Conviction Fund and DWS Invest Top Dividend, among others. On the bond side, the sub-fund invested in DWS Invest sub-funds, including DWS Invest Short Duration Credit, DWS Invest Euro Bonds (Short) and DWS Invest Euro High Yield Corporates.

The international stock exchanges recorded appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe

than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustain-

ability-related disclosures in the financial services sector (“SFDR”).

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

## DWS Invest StepIn Global Equities

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 69.402 |
| Highest market risk exposure ..... | % | 87.944 |
| Average market risk exposure ..... | % | 77.019 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0 00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>1 367 878.36</b> |  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                      |                      |
|----------------------|----------------------|
| Class LC 0.70% p.a., | Class NC 1.18% p.a., |
| Class PFC 0.98% p.a. |                      |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

Further costs, charges and fees have been incurred at the level of the target funds. The fund invested more than 20% of its assets in target funds. If the target funds publish a TER themselves, this will be taken into account at fund level (synthetic TER). If a TER is not published at target fund level, the all-in fee / management fee will be used for the calculation. The synthetic TER was:

|                      |                      |
|----------------------|----------------------|
| Class LC 1.55% p.a., | Class NC 2.03% p.a., |
| Class PFC 1.83% p.a. |                      |

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

|   | Class NC  | EUR | 142.00        |
|   | Class PFC | EUR | 142.08        |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

## DWS Invest StepIn Global Equities

---

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

## DWS Invest Top Asia

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation and surpass the performance of the benchmark (MSCI AC Asia ex Japan TR net). To achieve this, the fund invests mainly in equities of issuers that have their registered office or conduct their principal business activity in Asia. A company is viewed as having its principal business activity in Asia if the greatest part of its earnings or revenues is generated there. Considered as Asian issuers are companies having their registered office or principal business activity in Hong Kong, India, Indonesia, Japan, Korea, Malaysia, the Philippines, Singapore, Taiwan, Thailand and the People's Republic of China. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance.

The sub-fund recorded a decline of 2.0% per share (LC share class; BVI method) in the fiscal year through December 31, 2023. Its benchmark rose by 2.4% (both percentages in euro terms).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and

<sup>2</sup> in USD

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

In terms of its regional equity allocation, the focus was on India, South Korea, Taiwan and, selectively, China. While the positioning in South Korea was very positive, mainly due to the emphasis on semiconductors, the performance of Chinese equities proved to

be very volatile. After the shift away from the zero-COVID policy, the Chinese equity market posted strong price increases up to the beginning of 2023. However, these then turned in a disappointing performance through the end of December 2023. In India, bank stocks in particular were heavily weighted, while in Taiwan the emphasis was also on semiconductors.

Sentiment in China initially improved when the government began to lift COVID restrictions and reopen cities. At the same time, the Chinese government signaled support for the real estate sector, for example by drawing up a 16-point rescue plan that gave developers better access to bank loans and to the bond and equity markets. The tension between China and the United States continued, with the USA tightening restrictions on exports of semi-

conductor technology to China. The APAC market first peaked at the end of January as the COVID situation in China stabilized, before weakening again until the end of September. China ended the fiscal year in negative territory. Despite several economic policy measures such as key interest rate cuts being taken, the macro-economic data was weaker than expected. The exodus of money from the Chinese market continued throughout the year. The positions in China recorded a negative performance. The investments in the Chinese internet and real estate sectors in particular were negatively impacted by the muted sentiment and recovery in real estate sales in China.

South Korea and Taiwan closed in positive territory. In South Korea, investors were bullish on the supply chain for electric vehicles (EV). Companies benefited from the US Inflation Protection Act, which incentivized Korean companies to step up investment in the US while keeping Chinese competitors out of the US electric vehicle market. In Taiwan, investments in artificial intelligence fueled demand for servers and components. The IT positions in Korea and Taiwan generated above-average positive returns within the portfolio.

## DWS Invest Top Asia

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI AC Asia ex Japan Net Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 91.279  |
| Highest market risk exposure | % | 126.421 |
| Average market risk exposure | % | 101.584 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0 00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| 3. Auditing, legal and publication costs. . . . .                                | EUR        | -53 106.15            |
| 4. Taxe d'abonnement. . . . .  | EUR        | -139 423.51           |
| 5. Other expenses . . . . .  | EUR        | -143 780.67           |
| <b>Total expenses</b> . . . . .  | <b>EUR</b> | <b>-4 652 559.92</b>  |
| <b>III. Net investment income</b> . . . . .                                      | <b>EUR</b> | <b>1 012 699.69</b>   |
| <b>IV. Sale transactions</b>   |            |                       |
| Realized gains/losses. . . . .   | EUR        | -10 903 790.13        |
| <b>Capital gains/losses</b> . . . . .  | <b>EUR</b> | <b>-10 903 790.13</b> |
| <b>V. Net gain/loss for the fiscal year</b> . . . . .                            | <b>EUR</b> | <b>-9 891 090.44</b>  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                            |                          |
|----------------------------|--------------------------|
| Class FC 0.87% p.a.,       | Class LC 1.62% p.a.,     |
| Class LD 1.62% p.a.,       | Class NC 2.32% p.a.,     |
| Class TFC 0.87% p.a.,      | Class TFD 0.86% p.a.,    |
| Class GBP D RD 0.87% p.a., | Class USD FC 0.87% p.a., |
| Class USD LC 1.62% p.a.,   | Class USD TFC 0.82% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 368 526.96.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

## DWS Invest Top Asia

---

### Swing Pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Top Dividend

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Top Dividend seeks to generate capital appreciation in the medium to long term. For this, the sub-fund invests mainly in equities of domestic and foreign issuers from which an above-average dividend yield is expected. Dividend yield is a key criterion in the selection of individual stocks. However, the dividend yields need not necessarily be above the market average. Along with a solid balance sheet, high cash flow and a good management team, dividend sustainability is one of the main deciding factors. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

The sub-fund recorded an appreciation of 1.3% per share (LC share class; BVI method; in euro) in the fiscal year through December 31, 2023.

### Investment policy in the reporting period

The situation in the international capital markets remained challenging in the fiscal year now ended. The main influencing factors and risks were the still difficult global geopolitical situation, a thin market spread in the equity market and the interest rate rise in the United States and also in Europe. For a time, the significantly higher interest rates coupled with weakening economic growth also generated increased concern in the equity markets about a

potential recession. Companies with high levels of debt achieved below-average returns. The technology sector, on the other hand, achieved a very strong return on the back of artificial intelligence.

For strategic reasons, the sub-fund's investment focus continued to be on companies that pay above-average dividends to their investors. These include both more defensive stocks, e.g. from segments such as consumer staples, telecommunications, health care, insurance and utilities, and

cyclically sensitive sectors such as energy and basic materials.

Equities whose price development was driven by the topic of artificial intelligence made an above-average contribution to performance. This included, for example, semiconductor companies such as Broadcom and Taiwan Semiconductor Manufacturing. The automotive manufacturing company Stellantis was another of the winners thanks to its robust margin growth, as was the U.S. financial institution JPMorgan Chase.

By contrast, Pfizer's and Bristol Myers' pharmaceuticals equities turned in a negative performance precipitated by the unsuccessful outcome of clinical trials. US utilities like Nextera Energy and Dominion Energy were faced with higher future financing costs due to the sharp rise in interest rates, generating negative returns as a result. The same was true for fertilizer manufacturer Nutrien, which saw prices fall in a softening agricultural market.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

\* Further details are set out in the current sales prospectus.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World High Dividend Yield

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 76.773 |
| Highest market risk exposure | % | 91.071 |
| Average market risk exposure | % | 85.486 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0 00 as of the reporting date.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Citigroup Global Markets Europe AG, Deutsche Bank AG, Morgan Stanley Europe SE, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH, The Bank of New York Mellon SA, Toronto Dominion Bank and UBS AG.

### Securities loans

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 398 760.59 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year, which are accounted for off the books. However, the current political situation makes it difficult to assess whether the dividend and interest payments by the Russian companies will be resumed at a later date.

### Footnotes

\* Some or all of these securities are lent.

\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\* Does not include positions with a negative balance, if such exist.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                                 |
|--------------------------------|---------------------------------|
| Class AUD TFCH (P) 0.87% p.a., | Class CHF FCH (P) 0.87% p.a.,   |
| Class CHF LCH (P) 1.62% p.a.,  | Class CHF TFCH (P) 0.88% p.a.,  |
| Class FC 0.84% p.a.,           | Class FD 0.84% p.a.,            |
| Class IC 0.55% p.a.,           | Class IDQ 0.55% p.a.,           |
| Class LC 1.59% p.a.,           | Class LCH (P) 1.62% p.a.,       |
| Class LD 1.59% p.a.,           | Class LDM 0.74% <sup>1</sup> ,  |
| Class LDQH (P) 1.62% p.a.,     | Class NC 2.29% p.a.,            |
| Class ND 2.29% p.a.,           | Class PFC 2.72% p.a.,           |
| Class PFD 2.72% p.a.,          | Class TFC 0.83% p.a.,           |
| Class TFCH (P) 0.85% p.a.,     | Class GBP C RD 0.84% p.a.,      |
| Class GBP D RD 0.83% p.a.,     | Class GBP DH (P) RD 0.86% p.a., |
| Class GBP LD DS 1.59% p.a.,    | Class SEK LCH (P) 1.62% p.a.,   |
| Class SGD LC 1.59% p.a.,       | Class SGD LCH (P) 1.62% p.a.,   |
| Class SGD LDQ 1.59% p.a.,      | Class SGD LDQH (P) 1.62% p.a.,  |
| Class USD FC 0.83% p.a.,       | Class USD FCH (P) 0.87% p.a.,   |
| Class USD LC 1.59% p.a.,       | Class USD LCH (P) 1.62% p.a.,   |
| Class USD LDH (P) 1.62% p.a.,  | Class USD LDM 1.60% p.a.,       |
| Class USD LDQ 1.59% p.a.,      | Class USD LDQH (P) 1.62% p.a.   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of:

|                                 |                                  |
|---------------------------------|----------------------------------|
| Class AUD TFCH (P) 0.003% p.a., | Class CHF FCH (P) 0.003% p.a.,   |
| Class CHF LCH (P) 0.003% p.a.,  | Class CHF TFCH (P) 0.004% p.a.,  |
| Class FC 0.003% p.a.,           | Class FD 0.003% p.a.,            |
| Class IC 0.003% p.a.,           | Class IDQ 0.003% p.a.,           |
| Class LC 0.003% p.a.,           | Class LCH (P) 0.003% p.a.,       |

| Class USD LDQ 0.003% p.a.,      | Class USD LDQH (P) 0.003% p.a.   |

of the fund's average net assets in relation to the respective share class.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 805 739.51.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets 2023

| I. Value of the fund's net assets at the beginning of the fiscal year . . . . . |     | EUR 3 154 078 184.63 |
|---|-----|----------------------|
| 1. Distribution for the previous year / Interim distribution . . . . .          | EUR | -31 154 641.13       |
| 2. Net outflows <sup>2</sup> . . . . .  | EUR | -909 226 574.79      |
| 3. Income adjustment . . . . .  | EUR | 40 185 717.95        |

## DWS Invest Top Dividend

---

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.11% of all transactions. The total volume was EUR 4 259 268.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

| <b>Net assets</b>                               | <b>254 986 356.30</b>                 | <b>796 281 872.11</b>                 | <b>126 840 998.21</b>                             |

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 . . . . . USD 1.107000 = EUR 1  
 Fiscal year-end 2022 . . . . . USD 1.068951 = EUR 1  
 Fiscal year-end 2023 . . . . . JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 . . . . . JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

\*\*\* In the case of derivatives and forward transactions, the amount reported as "total assets" comprises the positive balance of the netted individual positions within the same type of product, while negative balances are included under "total liabilities."

<sup>1</sup> The sub-fund was launched on November 27, 2023.

<sup>2</sup> The sub-fund was launched on February 15, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.  
 Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.  
 Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

<sup>13</sup> The sub-fund was liquidated on April 11, 2023.

<sup>14</sup> The sub-fund was liquidated on November 21, 2023.

<sup>15</sup> The sub-fund was liquidated on April 12, 2023.

<sup>16</sup> The sub-fund was liquidated on April 12, 2023.

<sup>17</sup> The sub-fund was liquidated on October 20, 2023.

<sup>18</sup> The sub-fund was launched on February 15, 2023.

<sup>19</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.  
 Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.  
 Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
 Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

For the purpose of consolidation of the liquidated sub-fund and for reasons of comparability, the disclosure of the income adjustment and reimbursed expense amounts attributable to the individual income and expense items was changed (in contrast to the individual presentation of the income adjustment and reimbursed expenses in the form of a separate presentation of the total amount) in favor of attributing the individual income adjustment and reimbursed expense components to the respective income adjustment and reimbursed expense items.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

<sup>13</sup> The sub-fund was liquidated on November 21, 2023.

<sup>14</sup> The sub-fund was liquidated on November 21, 2023.

<sup>15</sup> The sub-fund was liquidated on November 21, 2023.

<sup>16</sup> The sub-fund was liquidated on November 21, 2023.

<sup>17</sup> The sub-fund was liquidated on November 21, 2023.

<sup>18</sup> The sub-fund was liquidated on November 21, 2023.

<sup>19</sup> The sub-fund was liquidated on November 21, 2023.

<sup>20</sup> The sub-fund was liquidated on November 21, 2023.

<sup>21</sup> The sub-fund was liquidated on November 21, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was liquidated on April 11, 2023.

<sup>3</sup> The sub-fund was liquidated on April 12, 2023.

<sup>4</sup> The sub-fund was liquidated on December 21, 2023.

<sup>5</sup> The sub-fund was liquidated on October 20, 2023.

<sup>6</sup> The sub-fund was liquidated on December 14, 2023.

<sup>7</sup> The sub-fund was launched on November 27, 2023.

<sup>8</sup> The sub-fund was liquidated on April 11, 2023.

<sup>9</sup> The sub-fund was liquidated on November 21, 2023.

<sup>10</sup> The sub-fund was liquidated on April 12, 2023.

<sup>11</sup> The sub-fund was launched on February 15, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

\* The portfolio compositions, incomes, expenses and changes in net assets of the sub-funds managed in foreign currencies were converted into euro at the exchange rates stated below. The attached financial statements represent the assets and liabilities of the individual sub-funds as well as of the fund as a whole. The financial statements for the respective sub-fund are prepared in the currency specified in the sales prospectus while the financial statements for the fund are prepared in its base currency. If the currency of a sub-fund differs from the fund's base currency, the following is carried out within the scope of the consolidation of the individual sub-fund currencies into the fund's base currency: the difference between the net assets of the sub-fund at the beginning of the reporting period converted at exchange rates applicable at the beginning of the reporting period and the value of the net assets of the sub-fund calculated at exchange rates applicable at the end of the reporting period is shown as "Exchange rate valuation differences on the fund's assets at the beginning of the reporting period" in the consolidated statement of changes in net assets for the fund.

Fiscal year-end 2023 ..... USD 1.107000 = EUR 1      Fiscal year-end 2023 ..... JPY 156.635029 = EUR 1  
Fiscal year-end 2022 ..... USD 1.068951 = EUR 1      Fiscal year-end 2022 ..... JPY 140.903712 = EUR 1

\*\* The fund's consolidated net assets, the consolidated statement of income and expenses and the consolidated statement of changes in net assets correspond to the sum of the results of the individual sub-funds. In the case of investments between sub-funds (in which one sub-fund invests in another sub-fund of the same umbrella fund), the corresponding accounts of the fund were not the object of an elimination for the purposes of the respective consolidated presentation.

<sup>1</sup> The sub-fund was liquidated on November 29, 2023.

<sup>2</sup> The sub-fund was launched on November 27, 2023.

<sup>3</sup> The sub-fund was liquidated on April 11, 2023.

<sup>4</sup> The sub-fund was liquidated on April 11, 2023.

<sup>5</sup> The sub-fund was liquidated on April 12, 2023.

<sup>6</sup> The sub-fund was liquidated on November 21, 2023.

<sup>7</sup> The sub-fund was liquidated on December 21, 2023.

<sup>8</sup> The sub-fund was liquidated on April 12, 2023.

<sup>9</sup> The sub-fund was liquidated on October 20, 2023.

<sup>10</sup> The sub-fund was launched on February 15, 2023.

<sup>11</sup> The sub-fund was liquidated on December 14, 2023.

<sup>12</sup> The sub-fund was liquidated on October 24, 2023.

## **REPORT OF THE RÉVISEUR D'ENTREPRISES AGRÉÉ**

### **Report on the audit of the financial statements**

#### **Audit opinion**

We have audited the financial statements of DWS Invest, SICAV and its respective sub-funds ("the Fund"), comprising the statement of net assets, the statement of investments in the securities portfolio and other net assets as of December 31, 2023, the statement of income and expenses and the statement of changes in net assets for the fiscal year ended on that date, as well as notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of DWS Invest, SICAV and its respective sub-funds as of December 31, 2023, and of the results of its operations and changes in its net assets for the fiscal year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of financial statements.

#### **Basis for the audit opinion**

We conducted our audit in accordance with the Law of July 23, 2016, on the audit profession ("Law of July 23, 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier ("CSSF"). Our responsibilities under the Law of July 23, 2016, and the ISAs as adopted in Luxembourg by the CSSF are further described in the "Responsibilities of the réviseur d'entreprises agréé for the audit of the financial statements" section. We are also independent of the Fund in accordance with the International Ethics Standards Board for Accountants' Code of Ethics for Professional Accountants, including International Independence Standards, ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and we have fulfilled our other ethical responsibilities in accordance with these ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

#### **Highlighting of a fact**

Without qualifying our opinion, we refer to the information provided in the notes on valuation of the investment portfolio of the sub-fund DWS Invest Emerging Markets IG Sovereign Debt (in liquidation). This information shows that the sub-fund concerned was liquidated, by resolution of the Board of Directors of the Fund effective January 10, 2024, and that the financial statements of the sub-fund concerned have therefore been prepared on the basis of liquidation values, departing from the going concern basis of accounting. Our audit opinion has not been modified with respect to this fact.

## **Other information**

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information included in the annual report, but does not include the financial statements and our report of the réviseur d'entreprises agréé thereon.

Our audit opinion on the financial statements does not cover the other information and we will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

## **Responsibility of the Board of Directors of the Fund**

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the ability of the Fund and of its respective sub-funds to continue as going concerns, disclosing, as applicable, matters related to the going concern and using the going concern basis of accounting unless the Board of Directors of the Fund intends either to liquidate the Fund or one of its sub-funds or to cease operations, or has no realistic alternative but to do so.

## **Responsibilities of the réviseur d'entreprises agréé for the audit of the financial statements**

The objective of our audit is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the réviseur d'entreprises agréé that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of July 23, 2016, and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of July 23, 2016, and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit.

We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures in the notes to the financial statements made by the Board of Directors of the Fund.
- Conclude on the appropriateness of the use by the Board of Directors of the Fund of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the ability of the Fund or of any its individual sub-funds to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the report of the réviseur d'entreprises agréé to the related disclosures in the notes to the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of the report of the réviseur d'entreprises agréé. However, future events or circumstances may result in the Fund or one of its sub-funds (with the exception of the sub-fund it has decided to close or intends to close) being unable to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures in the notes to the financial statements, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Luxembourg, April 5, 2024

KPMG Audit S.à r.l.  
Cabinet de révision agréé

Pia Schanz

# **Supplementary information**

# Retainers, fees and investments of the members of the Board of Directors

## Retainers, fees and investments of the members of the Board of Directors for the fiscal year ended December 31, 2022

---

Upon the approval of the shareholders at the general meeting of the company on April 26, 2023, the annual remuneration of the independent member of the Board of Directors based on the number of sub-funds of the company at the end of the fiscal year was approved. The independent member of the Board of Directors received EUR 20 000 for the fiscal year ended December 31, 2022.

The remuneration of the independent members of the Board of Directors is paid by the Management Company.

To clarify: Non-independent members of the Board of Directors do not receive remuneration for their function as members of the Board of Directors or other contributions in kind from the company or the Management Company.

## Retainers, fees and investments of the members of the Board of Directors for the fiscal year ended December 31, 2023

---

The general meeting of the shareholders of the company, which is to take place on April 24, 2024, will approve the annual remuneration for the independent and the external member of the Board of Directors for the fiscal year ended December 31, 2023. The amount earmarked for the independent member of the Board of Directors is EUR 20 000 and is based on the number of sub-funds at the end of the fiscal year ended December 31, 2023. The amount earmarked for the external member of the Board of Directors is EUR 10 000 and is based on the number of sub-funds at the end of the fiscal year ended December 31, 2023.

The remuneration of the independent and the external members of the Board of Directors is paid by the Management Company.

To clarify: Non-independent members of the Board of Directors do not receive remuneration for their function as members of the Board of Directors or other contributions in kind from the company or the Management Company.

# Remuneration disclosure

DWS Investment S.A. (the "Company") is a subsidiary in DWS Group GmbH & Co. KGaA ("DWS KGaA"), and is subject to the regulatory requirements of the Fifth Directive on Undertakings for Collective Investment in Transferable Securities ("UCITS V Directive") and the Alternative Investment Fund Management Directive ("AIFM Directive") as well as the European Securities and Markets Authority's Guidelines on Sound Remuneration Policies ("ESMA Guidelines") with regard to the design of its remuneration system.

## Remuneration Policy & Governance

The Company is governed by the Group-wide Compensation Policy that DWS KGaA has adopted for itself and all of its subsidiaries ("DWS Group" or only "Group").

In line with the Group structure, committees have been set up to ensure the appropriateness of the compensation system and compliance with regulatory requirements on compensation and are responsible for reviewing it.

As such the DWS Compensation Committee was tasked by the DWS KGaA Executive Board with developing and designing sustainable compensation principles, making recommendations on overall compensation and ensuring appropriate governance and oversight with regard to compensation and benefits for the Group.

Furthermore, the Remuneration Committee was established to support the Supervisory Board of DWS KGaA in monitoring the appropriate structure of the remuneration systems for all Group employees. This is done by testing the consistency of the remuneration strategy with the business and risk strategy and taking into account the effects of the remuneration system on the group-wide risk, capital and liquidity management.

The internal annual review at DWS Group level concluded the design of the remuneration system to be appropriate and no significant irregularities were recognized.

## Compensation structure

Employee compensation consists of fixed and variable compensation.

Fixed compensation remunerates employees for their skills, experience and competencies, commensurate with the requirements, size and scope of their role.

Variable compensation takes into account performance at group, divisional and individual level. Variable compensation generally consists of two elements – the "Franchise Component" and the "Individual Component".

The Franchise Component is determined based upon the performance of three Key Performance Indicators (KPIs) at DWS Group level. For the performance year 2023 these were: Adjusted Cost Income Ratio ("CIR"), Net Flows and ESG metrics.

The individual component of variable compensation takes into account a number of financial and non-financial factors, relativities within the peer group, and retention considerations. Variable compensation can be reduced accordingly or cancelled completely in the event of negative performance contributions or misconduct. In principle, it is only granted and paid out if the granting is affordable for the Group. Guaranteed variable compensation is not normally granted to employees. On an exceptional basis, guaranteed variable compensation can be granted to new hires but only during their first year of employment.

The compensation strategy is designed to achieve an appropriate balance between fixed and variable compensation. This helps to align employee compensation with the interests of customers, investors and shareholders, as well as to industry standards. At the same time, it ensures that fixed compensation represents a sufficiently high proportion of total compensation to allow the Group full flexibility in granting variable compensation.

## Determination of variable compensation and appropriate risk-adjustment

The total amount of variable compensation is subject to appropriate risk-adjustment measures which include ex-ante and ex-post risk adjustments. The robust methodology is designed to ensure that the determination of variable compensation reflects Group's risk-adjusted performance as well as the capital and liquidity position.

A number of considerations are used in assessing the performance of the business units. Performance is assessed in the context of financial and non-financial targets based on balanced scorecards. The allocation of variable compensation to the infrastructure areas and in particular to the control functions depends on the overall results of the Group, but not on the results of the business areas they oversee.

Principles for determining variable compensation apply at individual employee level which detail the factors and metrics that must be taken into account when making IVC decisions. These include, for instance, investment performance, client retention, culture considerations, and objective setting and performance assessment based on the "Total Performance" approach. Furthermore, any control function inputs and disciplinary sanctions and their impact on the VC have to be considered as well.

## Sustainable Compensation

Sustainability and sustainability risks are an essential part that determine the variable compensation. Therefore, the remuneration policy is fully in line and consistent with sustainability risks. Hence, DWS Group incentivises behaviour that benefits both interest of clients and the long-term performance of the firm. Relevant sustainability factors are reviewed on a regular basis and incorporated in the design of the compensation system.

## Compensation for 2023

The DWS Compensation Committee has monitored the affordability of VC for 2023 and determined that the Group's capital and liquidity levels remain above regulatory minimum requirements, and internal risk appetite threshold.

As part of the overall 2023 variable compensation granted in March 2024, the Franchise Component is awarded to eligible employees in line with the assessment of the defined KPIs. The Executive Board recognizing the considerable contribution of employees and determined a target achievement rate of 82.5% for 2023.

## Identification of Material Risk Takers

In accordance with the regulatory requirements, the Company has identified Material Risk Takers. The identification process was carried out in accordance with the Group's policies and is based on an assessment of the impact of the following categories of staff on the risk profile of the Company or on a fund it manages: (a) Board Members/Senior Management, (b) Portfolio/Investment managers, (c) Control Functions, (d) Staff heading Administration, Marketing and Human Resources, (e) other individuals (Risk Takers) in a significant position of influence, (f) other employees in the same remuneration bracket as other Risk Takers, whose roles have an impact on the risk profile of the Company or the Group. At least 40% of the VC for Material Risk Takers is deferred. Additionally, at least 50% of both, the upfront and the deferred proportion, are granted in the Group share-based instruments or fund-linked instruments for Key Investment Professionals. All deferred components are subject to a number of performance conditions and forfeiture provisions which ensure an appropriate ex-post risk adjustment. In case the VC is lower than EUR 50,000, the Material Risk Takers receive their entire variable compensation in cash without any deferral.

## Aggregate Compensation Information for the Company for 2023<sup>1</sup>

|  |     |            |
|--|-----|------------|
| Number of employees on an annual average                       |     | 99         |
| Total Compensation <sup>2</sup>                                | EUR | 15,739,813 |
| Fixed Pay  | EUR | 12,528,700 |
| Variable Compensation  | EUR | 3,211,113  |
| Thereof: Carried Interest                                      | EUR | 0          |
| Total Compensation for Senior Management <sup>3</sup>          | EUR | 1,476,953  |
| Total Compensation for other Material Risk Takers <sup>4</sup> | EUR | 0          |
| Total Compensation for Control Function employees              | EUR | 2,077,858  |

<sup>1</sup> In cases where portfolio or risk management activities have been delegated by the Company, the compensation data for delegates are not included in the table.

<sup>2</sup> Considering various elements of remuneration as defined in the ESMA Guidelines which may include monetary payments or benefits (such as cash, shares, options, pension contributions) or none (directly) monetary benefits (such as fringe benefits or special allowances for car, mobile phone, etc.).

<sup>3</sup> Senior Management refers to the members of the Management Board of the Company, only. Members of the Management Board meet the definition of managers. Apart from the members of Senior Management, no further managers have been identified.

<sup>4</sup> Identified risk takers with control functions are shown in the line "Control Function employees".

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|  | Cost portion of the Management Company          | -          | - |

|                               |  |   |   |
|-------------------------------|--|---|---|
|                               | <b>Income portion of third parties</b> |   |   |
|                               | Absolute                               | - | - |
|                               | In % of gross income                   | - | - |
| Cost portion of third parties | -                                      | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

| <b>Other</b>         | -               | - | - |

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

## DWS Invest Corporate Hybrid Bonds

| 6. Currency/Currencies of collateral received |   |   |   |
|---|---|---|---|
| Currency/Currencies:                          | - | - | - |

| 7. Collateral classified by term to maturity (absolute amounts) |   |   |   |
|---|---|---|---|
| Less than 1 day   | - | - | - |
| 1 day to 1 week   | - | - | - |
| 1 week to 1 month   | - | - | - |
| 1 to 3 months   | - | - | - |
| 3 months to 1 year  | - | - | - |
| More than 1 year  | - | - | - |
| No fixed maturity   | - | - | - |

| 8. Income and cost portions (before income adjustment) |          |   |   |
|--|----------|---|---|
| Income portion of the fund                             |          |   |   |
| Absolute   | 71163.09 | - | - |
| In % of gross income                                   | 67.00%   | - | - |
| Cost portion of the fund                               | -        | - | - |

| Income portion of the Management Company |          |   |   |
|--|----------|---|---|
| Absolute                                 | 35581.55 | - | - |
| In % of gross income                     | 33.00%   | - | - |
| Cost portion of the Management Company   | -        | - | - |

| Income portion of third parties |   |   |   |
|---------------------------------|---|---|---|
| Absolute                        | - | - | - |
| In % of gross income            | - | - | - |
| Cost portion of third parties   | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

|                          | <b>Income portion of the fund</b>                             |           |   |
|                          | Absolute  | 30 420.17 | - |
|                          | In % of gross income  | 67.00%    | - |
| Cost portion of the fund | -   | -         |   |

|  |   |           |   |
|--|---|-----------|---|
|  | <b>Income portion of the Management Company</b> |           |   |
|  | Absolute  | 15 210.09 | - |
|  | In % of gross income                            | 33.00%    | - |
|  | Cost portion of the Management Company          | -         | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

| More than 1 year   | - | - | -          |
| No fixed maturity  | - | - | 520 731.63 |

### 8. Income and cost portions (before income adjustment)

|                                   |   |   |         |
|-----------------------------------|---|---|---------|
| <b>Income portion of the fund</b> |   |   |         |
| Absolute                          | - | - | -       |
| In % of gross income              | - | - | 100.00% |
| Cost portion of the fund          | - | - | -       |

|   |   |   |   |
|---|---|---|---|
| <b>Income portion of the Management Company</b> |   |   |   |
| Absolute  | - | - | - |
| In % of gross income                            | - | - | - |
| Cost portion of the Management Company          | - | - | - |

|  |   |   |   |
|--|---|---|---|
| <b>Income portion of third parties</b> |   |   |   |
| Absolute                               | - | - | - |
| In % of gross income                   | - | - | - |
| Cost portion of third parties          | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

### 8. Income and cost portions (before income adjustment)

|                                   |        |   |   |
|-----------------------------------|--------|---|---|
| <b>Income portion of the fund</b> |        |   |   |
| Absolute                          | 496.03 | - | - |
| In % of gross income              | 67.00% | - | - |
| Cost portion of the fund          | -      | - | - |

|   |        |   |   |
|---|--------|---|---|
| <b>Income portion of the Management Company</b> |        |   |   |
| Absolute  | 248.02 | - | - |
| In % of gross income                            | 33.00% | - | - |
| Cost portion of the Management Company          | -      | - | - |

|  |   |   |   |
|--|---|---|---|
| <b>Income portion of third parties</b> |   |   |   |
| Absolute                               | - | - | - |
| In % of gross income                   | - | - | - |
| Cost portion of third parties          | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|                          | In % of gross income  | 67.00%     | - |
| Cost portion of the fund | -   | -          | - |

|  |   |            |   |
|--|---|------------|---|
|  | <b>Income portion of the Management Company</b> |            |   |
|  | Absolute  | 185 093.54 | - |
|  | In % of gross income                            | 33.00%     | - |
|  | Cost portion of the Management Company          | -          | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

| Other         | -               | - | - |

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|                          | <b>Income portion of the fund</b>                             |           |   |
|                          | Absolute  | 92 162.92 | - |
|                          | In % of gross income  | 67.00%    | - |
| Cost portion of the fund | -   | -         | - |

|  |   |           |   |
|--|---|-----------|---|
|  | <b>Income portion of the Management Company</b> |           |   |
|  | Absolute  | 46 081.46 | - |
|  | In % of gross income                            | 33.00%    | - |
|  | Cost portion of the Management Company          | -         | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

| Other         | -               | - | - |

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

| 8. Income and cost portions (before income adjustment) |           |   |   |
|--|-----------|---|---|
| Income portion of the fund                             |           |   |   |
| Absolute   | 22 254.58 | - | - |
| In % of gross income                                   | 67.00%    | - | - |
| Cost portion of the fund                               | -         | - | - |

| Income portion of the Management Company |           |   |   |
|--|-----------|---|---|
| Absolute                                 | 11 127.29 | - | - |
| In % of gross income                     | 33.00%    | - | - |
| Cost portion of the Management Company   | -         | - | - |

| Income portion of third parties |   |   |   |
|---------------------------------|---|---|---|
| Absolute                        | - | - | - |
| In % of gross income            | - | - | - |
| Cost portion of third parties   | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|--------------------------|---|--------------|---|
|                          | <b>8. Income and cost portions (before income adjustment)</b> |              |   |
|                          | <b>Income portion of the fund</b>                             |              |   |
|                          | Absolute  | 2 505 719.32 | - |
|                          | In % of gross income  | 67.00%       | - |
| Cost portion of the fund | -   | -            | - |

|  |   |              |   |
|--|---|--------------|---|
|  | <b>Income portion of the Management Company</b> |              |   |
|  | Absolute  | 1 252 859.66 | - |
|  | In % of gross income                            | 33.00%       | - |
|  | Cost portion of the Management Company          | -            | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

| <b>Other</b>         | -               | - | - |

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

## DWS Invest Euro-Gov Bonds

| 6. Currency/Currencies of collateral received |  |   |   |
|---|--|---|---|
| Currency/Currencies:                          | AUD, CAD, CHF, DKK, EUR, GBP, JPY, NOK, SEK, USD | - | - |

| 7. Collateral classified by term to maturity (absolute amounts) |                |   |   |
|---|----------------|---|---|
| Less than 1 day   | -              | - | - |
| 1 day to 1 week   | -              | - | - |
| 1 week to 1 month   | -              | - | - |
| 1 to 3 months   | -              | - | - |
| 3 months to 1 year  | -              | - | - |
| More than 1 year  | -              | - | - |
| No fixed maturity   | 478 428 488.16 | - | - |

| 8. Income and cost portions (before income adjustment) |            |   |   |
|--|------------|---|---|
| <b>Income portion of the fund</b>                      |            |   |   |
| Absolute   | 404 708.31 | - | - |
| In % of gross income                                   | 67.00%     | - | - |
| Cost portion of the fund                               | -          | - | - |

|   |            |   |   |
|---|------------|---|---|
| <b>Income portion of the Management Company</b> |            |   |   |
| Absolute  | 202 354.16 | - | - |
| In % of gross income                            | 33.00%     | - | - |
| Cost portion of the Management Company          | -          | - | - |

|  |   |   |   |
|--|---|---|---|
| <b>Income portion of third parties</b> |   |   |   |
| Absolute                               | - | - | - |
| In % of gross income                   | - | - | - |
| Cost portion of third parties          | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

| 9. Income for the fund from reinvestment of cash collateral, based on all SFTs and total return swaps |  |  |   |
|---|--|--|---|

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|                          | <b>Income portion of the fund</b>                             |           |   |
|                          | Absolute  | 50 581.64 | - |
|                          | In % of gross income  | 67.00%    | - |
| Cost portion of the fund | -   | -         | - |

|  |   |           |   |
|--|---|-----------|---|
|  | <b>Income portion of the Management Company</b> |           |   |
|  | Absolute  | 25 290.82 | - |
|  | In % of gross income                            | 33.00%    | - |
|  | Cost portion of the Management Company          | -         | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

| Currency/Currencies:                          | EUR | - | - |

| 7. Collateral classified by term to maturity (absolute amounts) |            |   |   |
|---|------------|---|---|
| Less than 1 day   | -          | - | - |
| 1 day to 1 week   | -          | - | - |
| 1 week to 1 month   | -          | - | - |
| 1 to 3 months   | -          | - | - |
| 3 months to 1 year  | -          | - | - |
| More than 1 year  | -          | - | - |
| No fixed maturity   | 577 234.77 | - | - |

| 8. Income and cost portions (before income adjustment) |           |   |   |
|--|-----------|---|---|
| Income portion of the fund                             |           |   |   |
| Absolute   | 35 913.39 | - | - |
| In % of gross income                                   | 67.00%    | - | - |
| Cost portion of the fund                               | -         | - | - |

| Income portion of the Management Company |           |   |   |
|--|-----------|---|---|
| Absolute                                 | 17 956.70 | - | - |
| In % of gross income                     | 33.00%    | - | - |
| Cost portion of the Management Company   | -         | - | - |

| Income portion of third parties |   |   |   |
|---------------------------------|---|---|---|
| Absolute                        | - | - | - |
| In % of gross income            | - | - | - |
| Cost portion of third parties   | - | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

|                          | <b>8. Income and cost portions (before income adjustment)</b> |            |   |
|                          | <b>Income portion of the fund</b>                             |            |   |
|                          | Absolute  | 141 106.48 | - |
|                          | In % of gross income  | 67.00%     | - |
| Cost portion of the fund | -   | -          | - |

|  |   |           |   |
|--|---|-----------|---|
|  | <b>Income portion of the Management Company</b> |           |   |
|  | Absolute  | 70 553.24 | - |
|  | In % of gross income                            | 33.00%    | - |
|  | Cost portion of the Management Company          | -         | - |

|  |  |   |   |
|--|--|---|---|
|  | <b>Income portion of third parties</b> |   |   |
|  | Absolute                               | - | - |
|  | In % of gross income                   | - | - |
|  | Cost portion of third parties          | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

#### Quality/Qualities:

Insofar as securities lending transactions, reverse repurchase agreements or transactions with OTC derivatives (except forward currency transactions) are concluded, collateral in one of the following forms is provided to the fund:

- Liquid assets such as cash, short-term bank deposits, money market instruments according to the definition in Directive 2007/16/EC of March 19, 2007, letters of credit and first-demand guarantees that are issued by top-rated credit institutions not affiliated with the counterparty, or bonds issued by an OECD member country or its local authorities or by supranational institutions and authorities at local, regional or international level, regardless of their term to maturity;
- Units of a collective investment undertaking investing in money market instruments that calculates a net asset value daily and has a rating of AAA or an equivalent rating;
- Units of a UCITS that invests predominantly in the bonds and equities listed under the next two indents;
- Bonds, regardless of their term to maturity, that have a minimum rating of low investment-grade;
- Equities admitted to or traded in a regulated market in a member state of the European Union or on an exchange in an OECD member country, provided that these equities are included in a major index.

The Management Company reserves the right to restrict the permissibility of the aforementioned collateral. Furthermore, the Management Company reserves the right to deviate from the aforementioned criteria in exceptional cases.

Additional information on collateral requirements can be found in the sales prospectus for the fund.

| In % of gross income                   | 33.00%  | - | - |
| Cost portion of the Management Company | -   | - | - |

|                               |  |   |   |
|-------------------------------|--|---|---|
|                               | <b>Income portion of third parties</b> |   |   |
| Absolute                      | -                                      | - | - |
| In % of gross income          | -                                      | - | - |
| Cost portion of third parties | -                                      | - | - |

If the (sub-)fund has carried out securities lending and borrowing, the (sub-)fund pays 33% of the gross revenues generated from securities lending and borrowing as costs/fees to the Management Company and retains 67% of the gross revenues generated from such transactions. Out of the 33%, the Management Company retains 5% for its own coordination and oversight tasks and pays the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) is paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing securities lending and borrowing.

For simple reverse repurchase agreement transactions (if permitted), i.e., those which are not used to reinvest cash collateral received under securities lending and borrowing or repurchase agreement transactions, the respective (sub-)fund retains 100% of the gross revenues, less the transaction costs that the (sub-)fund pays as direct costs to an external service provider.

The Management Company is a related party to DWS Investment GmbH.

If the (sub-)fund has entered into repurchase agreement transactions, these are currently simple reverse repurchase agreement transactions, and not other (reverse) repurchase agreement transactions. In case other (reverse) repurchase agreement transactions will be used, the sales prospectus will be updated accordingly. The (sub-)fund will then pay up to 33% of the gross revenues generated from (reverse) repurchase agreement transactions as costs/fees to the Management Company and retain at least 67% of the gross revenues generated from such transactions. Out of the maximum of 33%, the Management Company will retain 5% for its own coordination and oversight tasks and will pay the direct costs (e.g., transaction and collateral management costs) to external service providers. The remaining amount (after deduction of the Management Company costs and the direct costs) will be paid to DWS Investment GmbH for supporting the Management Company in initiating, preparing and implementing (reverse) repurchase agreement transactions.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Artificial Intelligence

**Legal entity identifier:** 549300ES0V84WWN1ZR97

**ISIN:** LU1863263429

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 12.54% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 12,54%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Artificial Intelligence

| Indicators                                   | Description | Performance       |
|--|-------------|-------------------|
| <b>Sustainability indicators</b>             |             |                   |

| Nuclear weapons F                            |             | 0 % of assets     |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?".

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Artificial Intelligence

| Indicators   | Description  | Performance   |
|--|--|---------------|
| <b>Principal Adverse Impact</b>  |  |               |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 0 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons.) | 0 % of assets |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Artificial Intelligence

| Largest investments                    | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|--|--|----------------------------------|----------------------|

| Tencent Holdings                       | J - Information and communication  | 1.7 %                            | China                |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 96.85% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.58%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 96.85% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 12.54% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 8.5% and the minimum share of socially sustainable investments was 4.04%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

3.15% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Artificial Intelligence

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| NA  | Other  | 8.7 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>0.0 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.5%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.79%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 4.04%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.79%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 3.15% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other. Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds, and equity warrants issued by foreign and domestic companies whose business would benefit from/or was currently related to the evolution of artificial intelligence. At least 60% of the sub-fund's assets were invested in equities.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **• DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **• DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

•

#### • **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### • **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### • **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Asian Small/Mid Cap

**Legal entity identifier:** 549300MP35HWZYEH7Z65

**ISIN:** LU0236153390

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Asian Small/Mid Cap

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 0 % of assets     |
| Climate and Transition Risk Assessment C    |             | 35.02 % of assets |
| Climate and Transition Risk Assessment D    |             | 40.02 % of assets |
| Climate and Transition Risk Assessment E    |             | 19.92 % of assets |

| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/ or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Asian Small/Mid Cap

| Indicators   | Description   | Performance   |
|--|---|---------------|
| <b>Principal Adverse Impact</b>  |   |               |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 0 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets |

As of: November 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Asian Small/Mid Cap

| Largest investments        | Breakdown by sector / issuer | in % of average portfolio volume | Breakdown by country |
|----------------------------|------------------------------|----------------------------------|----------------------|
| Chroma Ate                 | Industrial Goods & Services  | 5.7 %                            | Taiwan               |

| Wonik Materials Co. RS DFI | Chemicals                    | 2.6 %                            | South Korea          |
| Retail Group Holdings      | Industrial Goods & Services  | 2.6 %                            | Bermuda              |
| Hysan Development Co.      | Real Estate                  | 2.5%                             | Hongkong             |
| Shenzhen Investment Cons.  | Real Estate                  | 2.2%                             | Hongkong             |
| Getac Holdings             | Industrial Goods & Services  | 2.2 %                            | Taiwan               |
| Aneka Tambang              | Basic Resources Industrial   | 1.9 %                            | Indonesia            |
| Koh Young Technology       | Goods & Services Real        | 1.8 %                            | South Korea          |
| Robinsons Land Corp.       | Estate                       | 1.5%                             | Philippines          |

for the period from January 01, 2023 through November 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through November 29, 2023

What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the liquidation date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 94.97%

**Asset allocation**

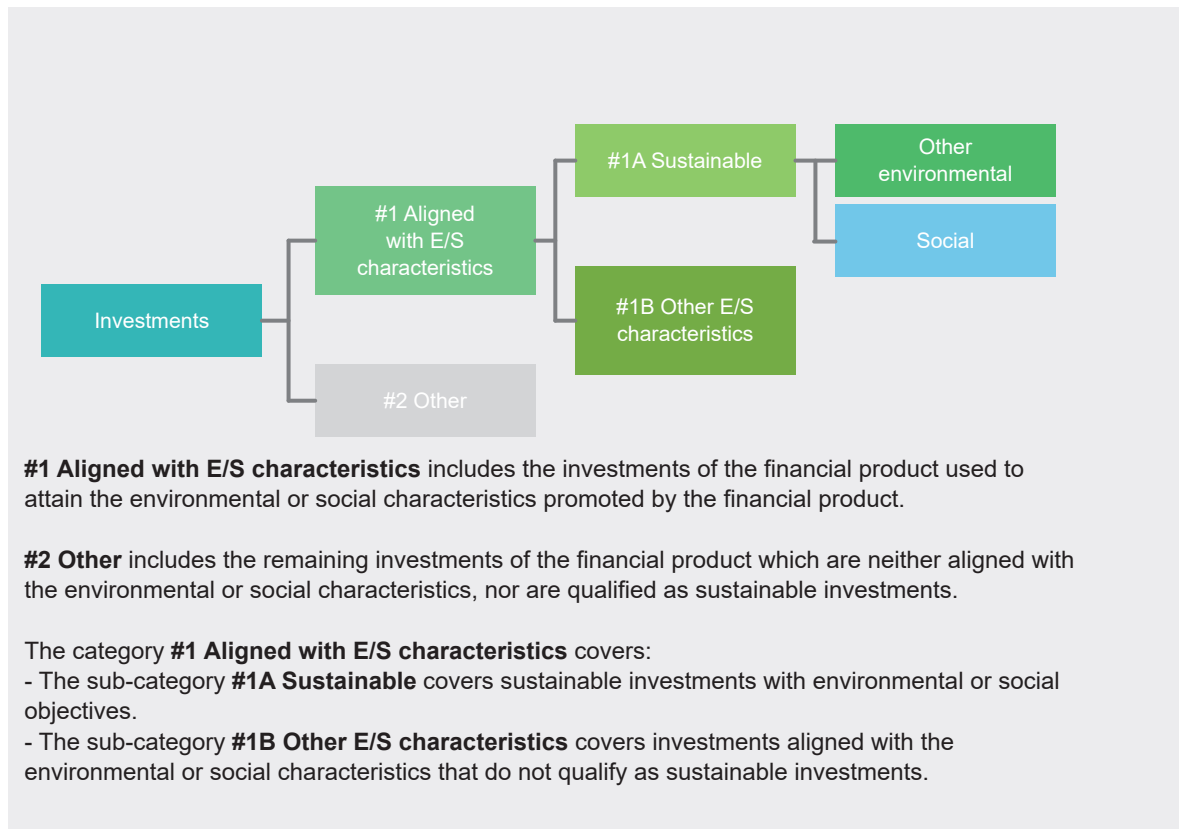

describes the share of investments in specific assets.

What was the asset allocation?

This sub-fund was liquidated on November 29, 2023. As of the liquidation date his sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 0%of the sub-fund’s net assets qualified as sustainable investments (#1A Sustainable).

Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 0% and the minimum share of socially sustainable investments was 0%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

As of the liquidation date, 100% of the sub-fund’s net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

In which economic sectors were the investments made?

DWS Invest Asian Small/Mid Cap

Breakdown by sector / issuer

in % of portfolio volume

Bank balances and others 100 %

Exposure to companies active in the fossil fuel sector 0 %

As of: November 29, 2023

This Sub-funds was liquidated on November 29, 2023. There were no assets in the portfolio as of the liquidation date. Therefore, no allocation of sectors could be made. Further information can be found in the asset overview in the annual report.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy as of the liquidation date was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 13.51%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments as of the liquidation date was 0%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 13.51%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 70% of the sub-fund's assets were invested in shares and other equity securities and uncertificated equity instruments of small and medium-sized companies registered in an Asian jurisdiction, or in companies that conduct their principal business activity in Asia or which, as holding companies, hold primarily interests in companies registered in Asia. Up to 20% of the sub-fund's assets were invested in securities such as A-Shares, B-Shares, bonds, and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, for example, within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts and business ethics. Issuers with highest severity of norm issues (i.e. a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

production or coal usage, based on an internal identification methodology.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

#### **DWS methodology for determining sustainable investments as defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measures the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Conservative Opportunities

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 12.1%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

### DWS Invest Conservative Opportunities

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 17.53 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Conservative Opportunities

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 13.15 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0.13 % of assets  |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 91.62% of portfolio assets.

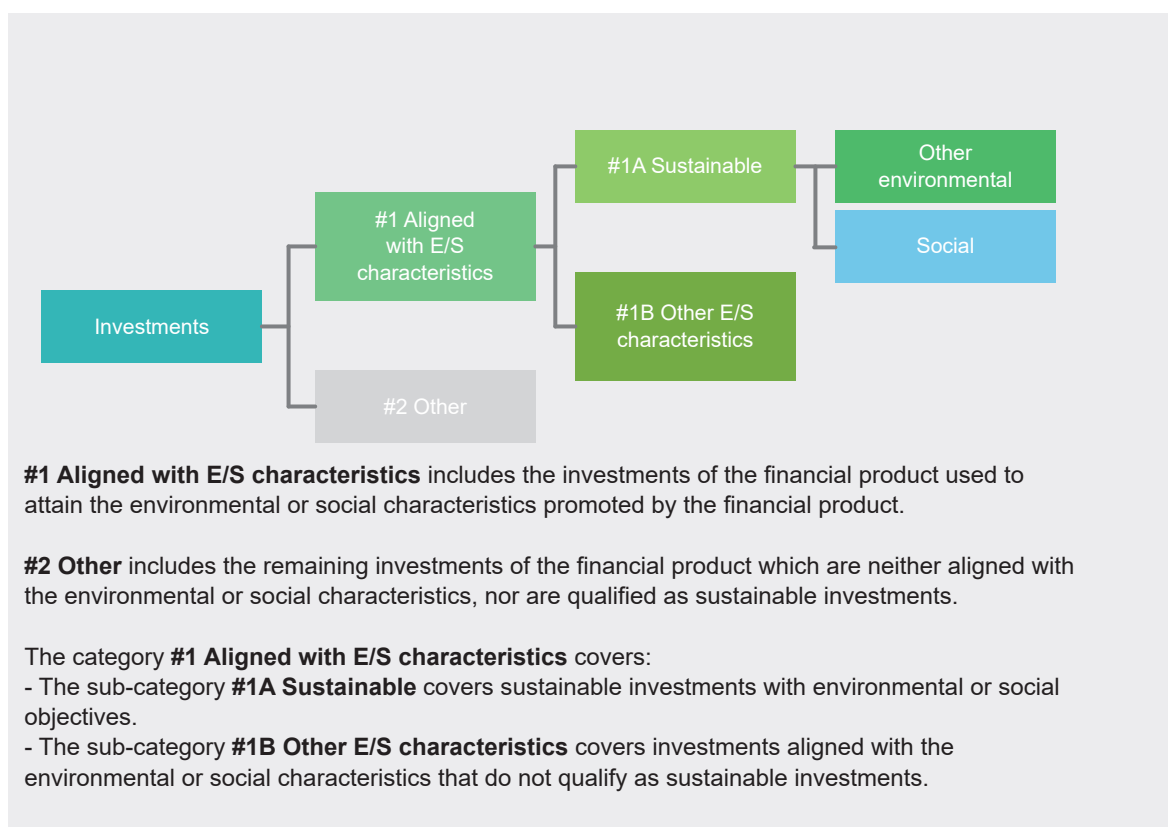

Proportion of sustainability-related investments for the previous year: 91.66%

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

This sub-fund invested 91.62% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 12.09% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 6.31% and the minimum share of socially sustainable investments was 5.78%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

8.38% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

### In which economic sectors were the investments made?

#### DWS Invest Conservative Opportunities

| NACE-Code   | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing   | 0.3 %                    |
| J   | Information and communication                                 | 0.3 %                    |

| NA  | Other   | 10.0 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>13.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?'

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 6.31%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.91%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5.78%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 12.91%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 1.56% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as the main investment strategy. The sub-fund combined eligible investment vehicles from different asset classes to achieve a defensive risk-reward investment profile and targeted an annualized volatility between 2% and 5% over a rolling 5-year period. The sub-fund did invest in equities, interest-bearing securities, certificates, investment funds, derivatives, convertible and warrant-linked bonds whose warrants related to securities, warrants on securities, participation and dividend-right certificates, money market instruments, and cash. At least 25% of the sub-fund's assets were invested in investment funds such as equity, balanced, bond, and money market funds. Additionally, the sub-fund did invest in equities, interest-bearing securities, certificates on, for example, equities, bonds, and indices, derivatives, convertible and warrant-linked bonds, warrants on securities, participation and dividend-right certificates, money market instruments, and cash.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers were nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, the Freedom House status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments as defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measures the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

Periodic disclosure for financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Conservative Sustainable Bonds

**Legal entity identifier:** 254900KO3XJKO0H7U940

**ISIN:** LU2708163634

**Sustainable investment objective**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <b>X</b> <b>Yes</b>  | <input type="radio"/> <input type="radio"/> <input type="radio"/> <b>No</b>  |
|--|--|
| <p><b>X</b> it made <b>sustainable investments with an environmental objective: 71,46 %</b></p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><b>X</b> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><b>X</b> It made <b>sustainable investments with a social objective: 27,99 %</b></p> | <p><input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b></p> |

**To what extent was the sustainable investment objective of this financial product met?**

The sustainable investment objective of this sub-fund was to predominantly finance environmentally beneficial projects or activities.

The sub-fund invested at least 80% of its net assets in green bonds where the use of proceeds is limited to projects with environmental and/or climate benefits (use of proceeds bonds) which typically contributed to one or several UN Sustainable Development Goals (UN SDGs), such as the following examples (non-exhaustive list):

- Goal 1: No poverty
- Goal 3: Good health and well-being
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 9: Industry, innovation and infrastructure
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 13: Climate action
- Goal 15: Life on land

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

Use of proceeds bonds were devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds was that the issuers of use of proceeds bonds invested the issue proceeds in environmentally and/or socially beneficial projects or activities and as such directly contributed to the sustainable objective of the sub-fund.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

The sub-fund has not designated a reference benchmark for the purpose of attaining its sustainable investment objective.

#### How did the sustainability indicators perform?

DWS applied the following in house assessment methodologies with a variety of assessment approaches that were used as sustainability indicators to measure the attainment of the sustainable investment objective:

• **DWS Use of Proceeds Bond Assessment** was used as indicator for qualifying a bond as use of proceeds bond that followed recognized industry standards and to check whether the issuer met defined ESG criteria. This assessment comprised:

1. Check for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds.

Performance: No investments in suboptimal assets

2. Exclusion of:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);

Performance: No investments in suboptimal assets

- Sovereign issuers labelled as “not free” by Freedom House;

Performance: No investments in suboptimal assets

- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);

Performance: No investments in suboptimal assets

- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;

Performance: No investments in suboptimal assets

- Companies with involvement in controversial weapons; or

Performance: No investments in suboptimal assets

- Companies with identified coal expansion plans.

Performance: No investments in suboptimal assets

• **DWS Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (Sustainability Investment Assessment)** is used as indicator to measure the proportion of sustainable investments.

Performance: No investments in suboptimal assets

The assessment methodologies are further described in section “What actions have been taken to attain the sustainable investment objective during the reference period?”.

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG causes significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of its Sustainability Investment Assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global (UN Global Compact) Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation EU 2022/1288 in relation to the sustainable investments in the portfolio. Principal adverse impacts were considered as part of the DNSH assessment under article 2(17) SFDR as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti - corruption and anti - bribery matters.

| Indicators   | Description  | Performance  |
|--|--|--|
| <b>Principal Adverse Impacts</b>   |  |  |
| PAIL - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.  | 1172.86 tCO2e  |
| PAIL - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)   | 181.99 tCO2e / Million EUR   |
| PAIL - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 579.48 tCO2e / Million EUR   |
| PAIL - 04. Exposure to companies active in the fossil fuel sector                              | Share of investments in companies active in the fossil fuel sector   | 10.83 % of assets  |
| PAIL - 05. Share of non-renewable energy consumption and production                            | The company's energy consumption and/or production from non-renewable sources as a percentage of total energy use and/or generation  | 53.66 % of assets  |
| PAIL - 06. Energy consumption (GWh) per million EUR revenue                                    | Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector   | A: 0 GWh / €M Income<br>B: 0 GWh / €M Income<br>C: 1.44 GWh / €M Income<br>D: 2.09 GWh / €M Income<br>E: 0 GWh / €M income<br>F: 0.18 GWh / €M Income<br>G: 0 GWh / €M Income<br>H: 0 GWh / €M Income<br>L: 1.22 GWh / €M Income<br>NA: 1.22 GWh / €M Income |
| PAIL - 07. Activities negatively affecting biodiversity sensitive areas                        | Share of investments in investee companies with sites/ operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas  | 0 % of assets  |
| PAIL - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.  | 0 % of assets  |
| PAIL - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average  | 2.8 % of assets  |
| PAIL - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises     | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises   | 0 % of assets  |
| PAIL - 11. Lack of processes and compliance mechanisms for UNGC principles and OECD Guidelines | Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises | 21.34 % of assets  |
| PAIL - 12. Unadjusted gender pay gap   | Average unadjusted gender pay gap of investee companies  | 22.22 % of assets  |
| PAIL - 13. Board gender diversity  | Average ratio of female to male board members in investee companies, expressed as a percentage of all board members  | 37.99 % of assets  |
| PAIL - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)  | 0 % of assets  |
| PAIL - 15. GHG intensity   | GHG intensity of investee countries  | 233.93 tCO2e / Mio. € GDP  |
| PAIL - 16. Investee countries subject to social violations                                     | Relative number of investee countries subject to social violations, as referred to in international treaties and conventions, United Nations principles and, where applicable, national law  | 0 % of assets  |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Conservative Sustainable Bonds

| Largest investments                                | Breakdown by sector / issuer                                      | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 98,58% of portfolio assets.

**Asset allocation**  
describes the share of  
investments in specific  
assets.

### What was the asset allocation?

This sub-fund invested 99,45 of its net assets in sustainable investments (#1 Sustainable). Thereof the share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 71,46% and the share of socially sustainable investments was 27,99%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0,55% of the net assets of the sub-fund were invested in investments that do not qualify as sustainable investments (#2 Not sustainable).

### In which economic sectors were the investments made?

#### DWS Invest Corporate Green Bonds

| NACE - Code   | Breakdown by sector according to NACE Codes   | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing   | 1,1 %                    |
| D   | Electricity, gas, steam and air conditioning supply                                     | 4,1 %                    |
| K   | Financial and insurance activities  | 57,0 %                   |
| L   | Real estate activities  | 0,9 %                    |
| M   | Professional, scientific and technical activities Öffentliche Verwaltung, Verteidigung; | 3,3 %                    |
| O   | Public administration and defence; compulsory social security                           | 32,9 %                   |
| NA  | Other   | 0,7 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>10,8 %</b>            |

As of: December 29,2023

### To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

#### **Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Sub-Fund invested 71.46% of its net assets in environmentally sustainable investments that did not comply with compliant with the EU taxonomy.

What was the share of socially sustainable investments?

The sub-fund invested 27.99% of the net assets in sustainable investments with a social objective.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The sub-fund invested the remaining proportion of the net assets in investments that were not aligned with the sustainable investment objective (#2 Not sustainable). These remaining investments could include all asset classes as foreseen in the specific investment policy, including cash and derivatives.

The portfolio management used the remaining investments in particular for liquidity and/or hedging purposes. The proportion and use of investments that were considered not sustainable did not affect the delivery of the sustainable investment objective, as these investments were neutral to such objective.

The sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

## What actions have been taken to attain the sustainable investment objective during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities from issuers domiciled in the European Economic Area (EEA) that financed special related/themed projects (use of proceeds bonds, that represented a group of sustainable bonds). All of the sub-fund's assets should be invested in interest-bearing debt securities that had an investment grade status at the time of the acquisition. The average duration of the sub-fund's assets was limited to a maximum of 5 years. All investments must be denominated in a currency from EEA members. The sub-fund manager aimed to hedge any currency risk versus the Euro in the portfolio.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the sustainable investment objective as described in the following sections. The attainment of the sub-fund's strategy was an integral part of the investment process and continuously monitored via the sub-fund's investment guidelines.

### **DWS Use of Proceeds Bond Assessment Methodology**

The financing of environmentally and/or socially beneficial projects through use of proceed bonds was assessed with a two-stage process.

1.

In a first stage DWS assessed whether a bond qualified as a use of proceeds bond. A key element was checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focused on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

2.

If a bond complied with these principles, the second stage assessed the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social and corporate governance factors via the in-house DWS ESG assessment methodology that was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuers future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset in general were eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate the ESG quality of the issuer of a use of proceeds bond:

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behaviour within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced Labour, adverse environmental impacts and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment (i.e. a letter score of "F") were excluded as an investment.

#### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

- **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources and vulnerability to disasters; indicators for social aspects include the attitude toward child labour, equality and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

- **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as “not free” by Freedom House were excluded.

- **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

- **DWS exclusion for companies with identified coal expansion plans**

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology. Coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

### **DWS methodology for determining sustainable investments as defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, DWS measured the bond via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that such investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) the bond made a positive contribution to one or more UN SDGs, (2) the issuer of such bond significantly harmed any of these objectives (DNSH assessment) and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether a bond is sustainable. Where a positive contribution was determined, the bond was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investment as defined in article 2 (17) SFDR in the portfolio was calculated based on the value of the entire use-of-proceeds bonds that qualified as sustainable investment.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment.

Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objectives.

This sub-fund has not designated a reference benchmark to meet the sustainable investment objective.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Convertibles

**Legal entity identifier:** 22TBFQY7IVP2I86LED50

**ISIN:** LU0179219752

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 24.17%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Convertibles

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 2.85 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                          | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|---|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG ( $\geq 87.5$ DWS ESG score) | True SDG contributor ( $\geq 87.5$ SDG score) | True climate leader ( $\geq 87.5$ score) |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)              | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)        | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)        | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)             | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | $\geq 25\%$  | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score)      | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Convertibles

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 16.32 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97.09% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 98.77%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 97.09% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 24.17% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 8.88% and the minimum share of socially sustainable investments was 15.29%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

2.91% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Convertibles

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| B   | Mining and quarrying   | 1.9 %                    |

| NA  | Other  | 9.8 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>16.3 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 8.88%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.55%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 15.29%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.55%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 2.91% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on multiple asset classes as main investment strategy. At least 70% of the sub-fund's assets should be invested in convertible bonds, warrant-linked bonds and similar convertible instruments of national and international issuers. Up to 30% of the sub-fund's assets might be invested in fixed-interest and variable-interest securities excluding conversion rights and in equities, equity warrants and participation certificates, with the aggregate percentage of equities, equity warrants and participation certificates not to exceed 10%. A maximum of 20% of the sub-fund's assets might be invested in securities such as A-Shares, B-Shares, bonds and other securities listed and traded in Mainland China.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, receive better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers were nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assesses target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, the Freedom House status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

# Periodic disclosure for financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

## Sustainable investment objective

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <b>X</b> <b>Yes</b>  | <input type="radio"/> <input type="radio"/> <input type="radio"/> <b>No</b>  |
|--|--|
| <p><b>X</b> it made <b>sustainable investments with an environmental objective:</b> 94,61 %</p> <p><input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><b>X</b> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___ %</p> | <p><input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments.</p> <p><input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy</p> <p><input type="checkbox"/> with a social objective</p> <p><input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b></p> |

**To what extent was the sustainable investment objective of this financial product met?**

The sustainable investment objective of this sub-fund was to predominantly finance environmentally beneficial projects or activities.

The sub-fund invested at least 80% of its net assets in green bonds where the use of proceeds is limited to projects with environmental and/or climate benefits (use of proceeds bonds) which typically contributed to one or several UN Sustainable Development Goals (UN SDGs), such as the following examples (non-exhaustive list):

- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 9: Industry, innovation and infrastructure
- Goal 11: Sustainable cities and communities
- Goal 13: Climate action
- Goal 15: Life on land

The sub-fund also invested in social bonds where the use of proceeds is targeted to projects with social benefits, but without a minimum commitment in terms of investment allocation at portfolio level.

Use of proceeds bonds were devoted to (re)finance projects or activities with positive environmental and/or social impacts. The decisive difference to conventional bonds was that the issuers of use of proceeds bonds invested the issue proceeds in environmentally and/or socially beneficial projects or activities and as such directly contributed to the sustainable objective of the sub-fund.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

**Sustainability indicators** measure how the sustainable objectives of this financial product are attained.

The sub-fund has not designated a reference benchmark for the purpose of attaining its sustainable investment objective.

#### How did the sustainability indicators perform?

DWS applied the following in house assessment methodologies with a variety of assessment approaches that were used as sustainability indicators to measure the attainment of the sustainable investment objective:

• **DWS Use of Proceeds Bond Assessment** was used as indicator for qualifying a bond as use of proceeds bond that followed recognized industry standards and to check whether the issuer met defined ESG criteria. This assessment comprised:

1. Check for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds.  
Performance: No investments in suboptimal assets

2. Exclusion of:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);  
Performance: No investments in suboptimal assets

- Sovereign issuers labelled as “not free” by Freedom House;  
Performance: No investments in suboptimal assets

- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);  
Performance: No investments in suboptimal assets

- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;  
Performance: No investments in suboptimal assets

- Companies with involvement in controversial weapons; or  
Performance: No investments in suboptimal assets

- Companies with identified coal expansion plans.  
Performance: No investments in suboptimal assets

• **DWS Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (Sustainability Investment Assessment)** is used as indicator to measure the proportion of sustainable investments.  
Performance: No investments in suboptimal assets

The assessment methodologies are further described in section “What actions have been taken to attain the sustainable investment objective during the reference period?”.

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Corporate Green Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 76.37 % of assets |
| Climate and Transition Risk Assessment B    |             | 15.95 % of assets |
| Climate and Transition Risk Assessment C    |             | 5.52 % of assets  |

| Nuclear weapons F                           |             | 0 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

**DWS ESG-Assessment Scale**

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG causes significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation. Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of its Sustainability Investment Assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global (UN Global Compact) Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its safeguard assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the United Nations Global Compact and the standards of the International Labour Organization. Companies with assessed and reconfirmed highest violations of one of the international norms were considered as non-compliant to the safeguards and their economic activities could not be considered sustainable.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund management considered all mandatory principal adverse indicators from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation EU 2022/1288 in relation to the sustainable investments in the portfolio. Principal adverse impacts were considered as part of the DNSH assessment under article 2(17) SFDR as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti - corruption and anti - bribery matters.

| Indicators   | Description  | Performance  |
|--|--|--|
| <b>Principal Adverse Impacts</b>   |  |  |
| PAIL - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's cope 1+2+3 GHG emissions.   | 70.811,44 tCO2e  |
| PAIL - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)   | 362,08 tCO2e / Million EUR   |
| PAIL - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 737,55 tCO2e / Million EUR   |
| PAIL - 04. Exposure to companies active in the fossil fuel sector                              | Share of investments in companies active in the fossil fuel sector   | 22,71 % of assets  |
| PAIL - 05. Share of non-renewable energy consumption and production                            | The company's energy consumption and/or production from non-renewable sources as a percentage of total energy use and/or generation  | 49,79 % of assets  |
| PAIL - 06. Energy consumption (GWh) per million EUR revenue                                    | Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector   | A: 0 GWh / €M Income<br>B: 0 GWh / €M Income<br>C: 0.47 GWh / €M Income<br>D: 4.62 GWh / €M Income<br>E: 3.95 GWh / €M Income<br>F: 0 GWh / €M Income<br>G: 0.07 GWh / €M Income<br>H: 0.75 GWh / €M Income<br>L: 0.91 GWh / €M Income<br>NA: 0.02 GWh / €M Income |
| PAIL - 07. Activities negatively affecting biodiversity sensitive areas                        | Share of investments in investee companies with sites/ operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas  | 0 % of assets  |
| PAIL - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.  | 0 % of assets  |
| PAIL - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average  | 0.82 % of assets   |
| PAIL - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises     | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises   | 0 % of assets  |
| PAIL - 11. Lack of processes and compliance mechanisms for UNGC principles and OECD Guidelines | Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises | 16.28 % of assets  |
| PAIL - 12. Unadjusted gender pay gap   | Average unadjusted gender pay gap of investee companies  | 16.30 % of assets  |
| PAIL - 13. Board gender diversity  | Average ratio of female to male board members in investee companies, expressed as a percentage of all board members  | 38.70 % of assets  |
| PAIL - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)  | 0 % of assets  |
| PAIL - 15. GHG intensity   | GHG intensity of investee countries  | 219,50 tCO2e / €M GDP  |
| PAIL - 16. Investee countries subject to social violations                                     | Relative number of investee countries subject to social violations, as referred to in international treaties and conventions, United Nations principles and, where applicable, national law  | 0 % of assets  |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Corporate Green Bonds

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 97,57% of portfolio assets.

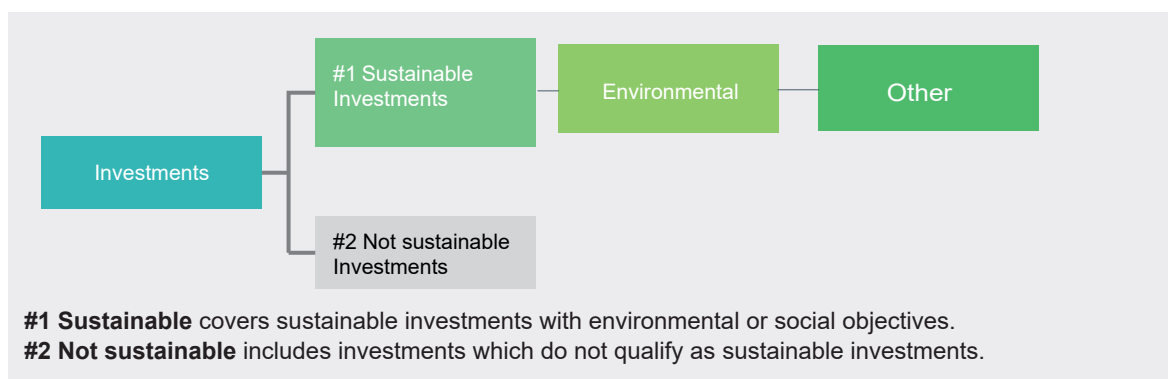

Proportion of sustainability-related investments for the previous year: 91,50%

## What was the asset allocation?

87,83% of the net sub-fund assets were invested in sustainable investments (#1 Sustainable).

12,17% of the net sub-fund assets were invested in investments that were not classified as sustainable investments (#2 Not sustainable).

**Asset allocation** describes the share of investments in specific assets.

In which economic sectors were the investments made?

### DWS Invest Corporate Green Bonds

As of: December 29,2023

 To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

---

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

#### **Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

#### **Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional and enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Sub-Fund invested 82,59 % of its net assets in environmentally sustainable investments that did not comply with compliant with the EU taxonomy.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 90,98%.

What was the share of socially sustainable investments?

The sub-fund does not commit to a minimum share of sustainable investments with a social objective.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The sub-fund invested the remaining proportion of the net assets in investments that were not aligned with the sustainable investment objective (#2 Not sustainable). These remaining investments could include all asset classes as foreseen in the specific investment policy, including cash and derivatives.

The portfolio management used the remaining investments in particular for liquidity and/or hedging purposes. The proportion and use of investments that were considered not sustainable did not affect the delivery of the sustainable investment objective, as these investments were neutral to such objective.

The sub-fund did not consider any minimum environmental or social safeguards on these remaining investments.

What actions have been taken to attain the sustainable investment objective during the reference period?

This sub-fund pursued a strategy based on bonds as main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities issued by public, private and semi-private issuers worldwide. At least 80% of the sub-fund's assets should be invested globally in interest-bearing debt securities denominated in Euro or hedged against the Euro that had an investment grade status at the time of the acquisition. A maximum of 20% of the sub-fund's assets could be invested into interest-bearing debt securities denominated in Euro or hedged against the Euro with a non-investment grade status with a minimum credit rating of B3 (rated by Moody's) or B- (rated by S&P and Fitch) at time of acquisition. Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the sustainable investment objective as described in the following sections.

The attainment of the sub-fund's strategy was an integral part of the investment process and continuously monitored via the sub-fund's investment guidelines.

#### **DWS Use of Proceeds Bond Assessment Methodology**

The financing of environmentally and/or socially beneficial projects through use of proceed bonds was assessed with a two-stage process.

1.

In a first stage DWS assessed whether a bond qualified as a use of proceeds bond. A key element was checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focused on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

2.

If a bond complied with these principles, the second stage assessed the ESG quality of the issuer of that bond in relation to defined minimum standards in respect to environmental, social and corporate governance factors via the in-house DWS ESG assessment methodology that was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuers future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset in general were eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate the ESG quality of the issuer of a use of proceeds bond:

##### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behaviour within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced Labour, adverse environmental impacts and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment (i.e. a letter score of "F") were excluded as an investment.

##### **• UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

- **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers. For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources and vulnerability to disasters; indicators for social aspects include the attitude toward child labour, equality and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

- **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as “not free” by Freedom House were excluded.

- **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

- **DWS exclusion for companies with identified coal expansion plans**

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology. Coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production.

**DWS methodology for determining sustainable investments as defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, DWS measured the bond via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that such investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) the bond made a positive contribution to one or more UN SDGs, (2) the issuer of such bond significantly harmed any of these objectives (DNSH assessment) and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether a bond is sustainable. Where a positive contribution was determined, the bond was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investment as defined in article 2 (17) SFDR in the portfolio was calculated based on the value of the entire use-of-proceeds bonds that qualified as sustainable investment.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment.

Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

**Reference benchmarks** are indexes to measure whether the financial product attains the sustainable investment objectives.

This sub-fund has not designated a reference benchmark to meet the sustainable investment objective.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Corporate Hybrid Bonds

**Legal entity identifier:** 549300TC4X3ECLFVCW74

**ISIN:** LU1245923484

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective:</b> ____%                   | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 29.80% of sustainable investments. |

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 29.80%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Corporate Hybrid Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 6.87 % of assets  |
| Climate and Transition Risk Assessment B    |             | 14.48 % of assets |
| Climate and Transition Risk Assessment C    |             | 20.59 % of assets |
| Climate and Transition Risk Assessment D    |             | 24.51 % of assets |
| Climate and Transition Risk Assessment E    |             | 24.49 % of assets |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 41.85 % of assets |

| Tobacco C                                   |             | 0 % of assets     |
| Tobacco D                                   |             | 0 % of assets     |
| Tobacco E                                   |             | 0 % of assets     |
| Tobacco F                                   |             | 0 % of assets     |
| <b>Involvement in controversial weapons</b> |             |                   |
| Anti-personnel mines D                      |             | 0 % of assets     |
| Anti-personnel mines E                      |             | 0 % of assets     |
| Anti-personnel mines F                      |             | 0 % of assets     |
| Cluster munitions D                         |             | 0 % of assets     |
| Cluster munitions E                         |             | 0 % of assets     |
| Cluster munitions F Depleted                |             | 0 % of assets     |
| uranium weapons D Depleted                  |             | 0 % of assets     |
| uranium weapons E Depleted                  |             | 0 % of assets     |
| uranium weapons F                           |             | 0 % of assets     |
| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Corporate Hybrid Bonds

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 62.14 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Corporate Hybrid Bonds

| Largest investments                        | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |

| Elia Group 23/Und.                         | D - Electricity, gas, steam and air conditioning supply | 1.9 %                            | Belgium              |
| Redeia Corporacion 23/Und.                 | D - Electricity, gas, steam and air conditioning supply | 1.9 %                            | Spain                |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 89.83% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 95.73%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 89.83% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 29.80% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 27.12% and the minimum share of socially sustainable investments was 2.68%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

10.17% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Corporate Hybrid Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying                                | 2.2 %                    |
| C   | Manufacturing                                       | 8.3 %                    |
| D   | Electricity, gas, steam and air conditioning supply | 25.5 %                   |
| F   | Construction  | 2.0 %                    |
| J   | Information and communication                       | 8.7 %                    |
| K   | Financial and insurance activities                  | 21.9 %                   |
| L   | Real estate activities                              | 0.4 %                    |
| M   | Professional, scientific and technical activities   | 18.8 %                   |
| N   | Administrative and support service activities       | 1.7 %                    |
| NA  | Other   | 10.4 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>62.1 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 27.12%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.69%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 2.68%. There was no minimum proportion for socially sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 20.69%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 10.17% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund's assets were invested globally in interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants related to securities, participation and dividend-right certificates, derivatives, as well as in money market instruments and liquid assets. At least 50% of the sub-fund's assets were invested globally in hybrid bonds issued by corporate issuers. Up to 100% of the sub-fund's assets were invested in subordinated bonds.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database uses, among others, the following assessment approaches to evaluate whether issuers/assets comply with the promoted environmental and social characteristics and whether companies in which investments are made apply good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or are less exposed to these risks, receive better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") are excluded as an investment.

#### **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was

used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. Additionally, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus had been excluded.

#### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds was met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

#### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that did not comply with the DWS standards for issuers.

#### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest Credit Opportunities

**Legal entity identifier:** 5493000JDDVBZ8UZSN12

**ISIN:** LU1968688876

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 24.20%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Credit Opportunities

| Indicators                                   | Description | Performance       |
|--|-------------|-------------------|
| <b>Sustainability indicators</b>             |             |                   |
| Climate and Transition Risk Assessment A     |             | 3.47 % of assets  |

| Nuclear weapons D                            |             | 0 % of assets     |
| Nuclear weapons E                            |             | 0 % of assets     |
| Nuclear weapons F                            |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest Credit Opportunities

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 23.48 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest Credit Opportunities

| Largest investments                           | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 95.12% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.24%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 95.12% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 24.2% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 18.22% and the minimum share of socially sustainable investments was 5.98%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

4.88% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest Credit Opportunities

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying                                | 0.7 %                    |
| C   | Manufacturing                                       | 10.1 %                   |
| D   | Electricity, gas, steam and air conditioning supply | 3.6 %                    |
| F   | Construction  | 0.3 %                    |
| H   | Transporting and storage                            | 2.0 %                    |
| I   | Accommodation and food service activities           | 1.2 %                    |
| J   | Information and communication                       | 6.7 %                    |
| K   | Financial and insurance activities                  | 45.0 %                   |

| NA  | Other   | 13.2 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>23.5 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 18.22%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.3%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5.98%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 19.3%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 4.88% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as the main investment strategy. The sub-fund's assets were invested worldwide in government bonds, bonds of near-government issuers, asset-backed securities, and covered bonds. Near-government issuers included central banks, government authorities, regional authorities, and supranational institutions. Corporate bonds and bonds of emerging-market issuers might have been included. At least 90% of the sub-fund's assets had a rating of B or higher. At least 95% of the sub-fund's assets were in EUR or hedged into EUR.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or this asset would in general be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made apply good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contribute less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labelled as "not free" by Freedom House were excluded.

#### **• Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal min-ing, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was

used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company may have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

Issuers have been excluded based on the following criteria:

- Sovereign issuers labelled as "not free" by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F");
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets may have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers could only be acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable. The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments. The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The applied ESG investment strategy does not pursue a committed minimum reduction of the scope of the investments.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest CROCI Euro

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 19.85%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI Euro

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |

| Nuclear weapons F                           |             | 0 % of assets     |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case a significant harm was identified, the issuer failed the DNSH assessment, and the investment was not considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS established quantitative thresholds and/or qualitative values to determine if an issuer significantly harms any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and may be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest CROCI Euro

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 46.53 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI Euro

| Largest investments              | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|----------------------------------|---|----------------------------------|----------------------|
| Sanofi                           | M - Professional, scientific and technical activities | 3.5 %                            | France               |
| Heidelberg Materials             | C - Manufacturing                                     | 3.4 %                            | Germany              |

| Engie                            | M - Professional, scientific and technical activities | 3.3 %                            | France               |
| STMicroelectronics               | C - Manufacturing                                     | 3.3 %                            | Switzerland          |
| Repsol                           | M - Professional, scientific and technical activities | 3.3 %                            | Spain                |
| Stellantis                       | M - Professional, scientific and technical activities | 3.3 %                            | Netherlands          |
| UCB Cap.                         | C - Manufacturing                                     | 3.3 %                            | Belgium              |
| TotalEnergies                    | M - Professional, scientific and technical activities | 3.3 %                            | France               |
| Compagnie de Saint-Gobain (C.R.) | M - Professional, scientific and technical activities | 3.3 %                            | France               |
| Infineon Technologies Reg.       | C - Manufacturing                                     | 3.3 %                            | Germany              |
| Deutsche Post Reg.               | H - Transporting and storage                          | 3.3 %                            | Germany              |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.98% of portfolio assets.

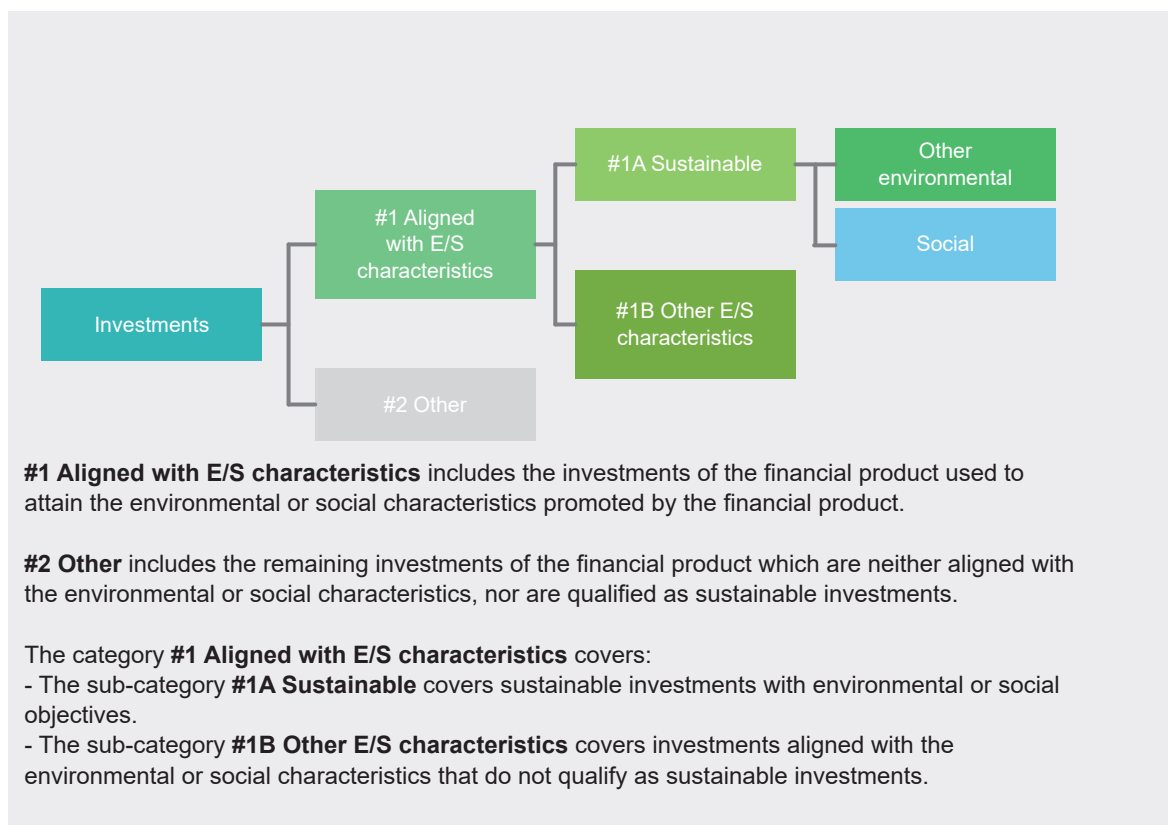

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

This sub-fund invested 99.98% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 19.85% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 10.05% and the minimum share of socially sustainable investments was 9.8%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.02% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

### In which economic sectors were the investments made?

#### DWS Invest CROCI Euro

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| C   | Manufacturing                                       | 36.9 %                   |
| D   | Electricity, gas, steam and air conditioning supply | 3.3 %                    |
| H   | Transporting and storage                            | 6.6 %                    |

| NA  | Other   | 3.3 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>46.5 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 10.05%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.58%.

What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 9.8%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 21.58%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.02% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 60% of the sub-fund's assets were invested in large-cap Eurozone equities that were considered undervalued according to the CROCI methodology and the CROCI Euro investment strategy. At least 75% of the sub-fund's assets were invested in equities of issuers having their headquarters in a member state of the European Economic and Monetary Union (EMU).

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that comply with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy did, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy, such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer was removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House is an international non-governmental organization that classifies countries by their

degree of political freedom and civil liberties. Based on the Freedom House status, countries that are labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sands: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviation from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **Sustainability investment assessment methodology**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its sustainability investment assessment which evaluated potential investments in relation to different criteria to conclude that an economic activity could be considered as sustainable as further detailed in section “What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?”

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs.  
Performance: No investments in suboptimal assets
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 0%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Asian Small/Mid Cap

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 1.66 % of assets  |
| Climate and Transition Risk Assessment B    |             | 16.5 % of assets  |
| Climate and Transition Risk Assessment C    |             | 70.13 % of assets |
| Climate and Transition Risk Assessment D    |             | 11.52 % of assets |
| Climate and Transition Risk Assessment E    |             | 0 % of assets     |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 70.48 % of assets |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

For the sub-fund the Company considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversity-sensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest CROCI Europe SDG

| Indicators   | Description   | Performance                            |
|--|---|--|
| <b>Principal Adverse Impact</b>  |   |  |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)              | 0 tCO2e / million EUR                  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3 Share of investments in companies active in the fossil fuel sector  | 0 tCO2e / million EUR<br>0 % of assets |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in investee companies with sites/ operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas | 0 % of assets                          |
| PAII - 07. Activities negatively affecting biodiversity sensitive areas                    | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.   | 0 tonnes / million EUR                 |
| PAII - 08. Emissions to water  | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average   | 0 tonnes / million EUR                 |
| PAII - 09. Hazardous waste ratio   | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises  | 0 % of assets                          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)   | 0 % of assets                          |
| PAII - 14. Exposure to controversial weapons   |   |  |

As of: April 11, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI Europe SDG

| Largest investments     | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|-------------------------|---|----------------------------------|----------------------|
| Novartis Reg.           | C - Manufacturing                                     | 1.7 %                            | Switzerland          |

| STMicroelectronics      | C - Manufacturing                                     | 0.8 %                            | Switzerland          |
| Veolia Environnement    | N - Administrative and support service activities     | 0.8 %                            | France               |

for the period from January 01, 2023, through April 11, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:  
for the period from January 01, 2023, through April 11, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the liquidation date was 0% of portfolio assets.

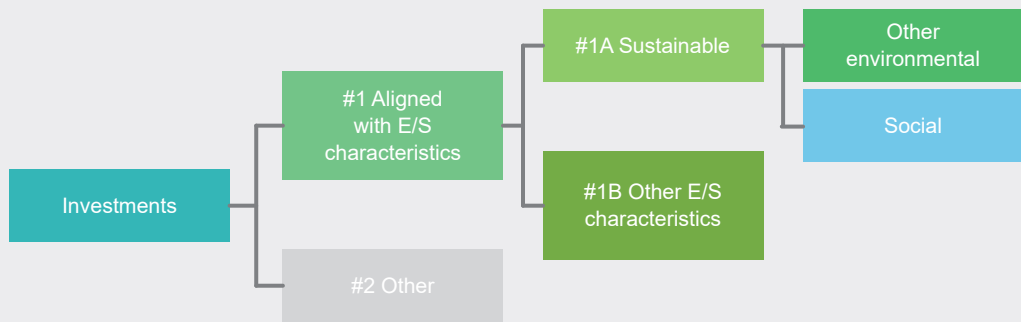

Proportion of sustainability-related investments for the previous year: 99.82%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

As of its liquidation date April 11, 2023, this sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 0% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

100% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI Europe SDG

| NACE-Code | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|-----------|---|--------------------------|
|           | Bank balances and other                                       | 100 %                    |
|           | <b>Exposure to companies active in the fossil fuel sector</b> | 0.0 %                    |

As of: April 11, 2023

This sub-funds was liquidated on April 11, 2023. There were no assets in the portfolio as of the liquidation date. Therefore, no allocation of sectors could be made. Further information can be found in the asset overview in the annual report.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 0%.

#### What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 55.33%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly large cap, European equities that were considered undervalued according to the CROCI methodology and the CROCI Europe SDG investment strategy, and that were considered to be in a position to profit from present or future geopolitical, social and economic trends and themes which had a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs). The sub-fund manager considered in its asset allocation the resulting scores from the SDG investment methodology. At least 80% of the investment strategy's (and consequently the sub-fund's) net assets were invested in issuers that were classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") were excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "E" subsequently exceeded 5% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in climate risk rating of individual issuers), the investment strategy (and consequently the sub-fund) might in some cases continued to hold an allocation exceeding 5% in issuers with high climate risk profile until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") were excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "E" subsequently exceeded 5% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in norm assessment rating of individual issuers), the investment strategy (and consequently the sub-fund) might in some cases continue to hold an allocation exceeding 5% in issuers with high severity of norm issues until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between corporate and sovereign issuers. For corporate issuers, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group was composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison received a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluated a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") were excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment were limited to 15% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "D" subsequently exceeds 15% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in norm assessment rating of individual issuers), the investment strategy (and consequently the sub-fund) may in some cases continued to hold an allocation exceeding 15% in issuers with a letter score of "D" until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **Exposure to controversial sectors**

The ESG database defined specific business areas and operations as relevant. Business areas and business activities that included production or concerned the distribution of products in a controversial area ("controversial sectors"). As controversial sectors were, for example, civilian firearms, defense industry, tobacco products and adult entertainment defined. Other business areas were considered relevant. Business activities defined as the production or distribution of products in others areas were concerned.

Other relevant areas included, for example, nuclear energy or coal mining coal-based energy production.

Issuers were rated according to the share of total revenue they generated in controversy business areas and controversial business activities. The lower the percentage Share of sales from the controversial business areas and controversial ones business activities, the better the rating was. Issuers (with the exception of target funds) with medium, high or excessive participation (i.e. a "D", "E" or "F" rating) were considered Investment excluded. Regarding participation in mining of coal and coal-based energy production was issued by issuers (with the exception of target funds) with high or excessive levels participation (i.e. an "E" or "F" rating) were excluded as an investment.

### **DWS exclusions for controversial weapons**

The ESG database assessed a company's involvement in the business of controversial weapons. Controversial weapons included for example anti-personnel mines, cluster munitions, depleted uranium weapons, nuclear weapons, chemical and biological weapons. Issuers were assessed based on their degree of involvement (production of controversial weapons, component production, etc) in the manufacturing of controversial weapons, regardless of total revenues they generated from controversial weapons. Issuers (with the exception of target funds) with medium, high or excessive involvement (i.e., a letter score of "D", "E" or "F") were excluded as an investment.

### **DWS Use of Proceeds Bond Assessment**

By way of derogation from the above, bonds that comply with DWS' Use-of-proceeds bond assessment were investable also in cases where the bond issuer did not fully comply with the ESG assessment methodology.

The financing of use of proceeds bonds would be assessed via a two-stage process.

In the first stage DWS assessed whether a bond qualified as a Use of Proceeds Bond. A key element was checking for compliance with the ICMA Green Bond Principles, the ICMA Social Bond Principles or the ICMA Sustainability Bond Principles. The assessment focused on the use of proceeds, the selection of the projects financed by these proceeds, the management of the proceeds spending as well as the annual reporting on the use of proceeds to investors.

- Companies with poor ESG quality compared to their peer group (i.e. a "E" or "F" rating),
- Sovereign issuers with high or excessive governance controversies (i.e. an "E" or "F" rating),
- Issuers with the highest severity of norm violations (i.e. an "F" rating) or
- Issuers with excessive involvement in controversial arms deals (i.e. a "D", "E" or "F" rating).

To the extent that the sub-fund has the advertised ecological and social characteristics as well as the corporate governance practices also sought through investments in target funds, the latter had to comply with the above DWS standards related to climate and transition risk, norms and DWS ESG quality assessment (except the assessment of states).

The environmental or social characteristics advertised by the sub-fund have not been endorsed by the use of derivatives achieved. Derivatives were therefore used when calculating the minimum share of the assets that met these characteristics were not taken into account. Derivatives on individual issuers were only allowed to be acquired for the sub-fund if the issuers of the underlying asset met the criteria of the ESG assessment methodology.

Supplementary liquid assets have not been assessed using the ESG assessment methodology.

### **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer was measured by dedicated scores, which were the result of DWS SDG investment assessment. Issuers were identified and scored essentially based on their positive and negative contribution to the UN SDGs. In addition, the methodology identifies risk and adjusted SDG scores accordingly.

The sub-fund management considered in its allocation the resulting scores from the DWS SDG investment assessment and invested in issuers that were classified in the highest three scores (i.e., letter scores "A" - "C"). Issuers with a low SDG score (i.e., a letter score "E" or "F") were excluded as an investment.

In addition, issuers with a "D" rating are included in the DWS SDG assessment of investments. Timing of the regular recomposition of the investment strategy in accordance with the rules of the Investment strategy limited to 15% of the net sub-fund assets. Will the cap of 15% for Issuers with a "D" rating subsequently exceeded (due to shifts in the portfolio weightings based on different price developments of the positions or one change in the rating of individual issuers in the DWS SDG assessment of investments), the investment strategy (and therefore the sub-fund) can in some cases be up to to the next regular recomposition of the investment strategy, potentially for a period of time of up to three months, continue to have a share of more than 15% in issuers with a "D" Keep rating.

### DWS methodology for determining sustainable investments

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

In addition, the management company considers active ownership to be very effective means to improve corporate governance, policies and procedures and to a better long-term performance of the investee companies. Active ownership means that position as a shareholder to influence the activities or behavior of the to use investment companies. A constructive dialogue can be held with the portfolio companies on topics such as strategy, financial and non-financial performance, risk, capital structure, social and ecological impacts and corporate governance, including topics such as Disclosure, culture and compensation. For example, a dialogue can be about Issuer meetings or mandate agreements can be exercised. This is also the case with equity investments an interaction with the company through the exercise of voting rights (proxy voting) or participation possible at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest CROCI Global Dividends

**Legal entity identifier:** 549300ACRXW8VM9MW354

**ISIN:** LU1769944106

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective:</b> ____%                   | <input type="checkbox"/> It promoted <b>Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments. |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics, as well as sustainable investment, was assessed via the application of an in-house DWS ESG assessment methodology, as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that was used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as an indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as an indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as an indicator for a company's involvement in controversial weapons.  
Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI Global Dividends

| Indicators                                   | Description | Performance       |
|--|-------------|-------------------|
| <b>Sustainability indicators</b>             |             |                   |
| Climate and Transition Risk Assessment A     |             | 1.91 % of assets  |

| Nuclear weapons E                            |             | 0 % of assets     |
| Nuclear weapons F                            |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest CROCI Global Dividends

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 39.37 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

## What were the top investments of this financial product?

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.94% of portfolio assets.

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.94% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0.06% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI Global Dividends

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| NA  | Other  | 0.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>39.4 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.06% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund's assets were predominantly in large-cap developed market global equities that were considered undervalued and offered a comparatively high and sustainable dividend yield according to the CROCI methodology and the CROCI Global Dividends investment strategy.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was an integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy might, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer was removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were

labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company might have decided to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 28.01% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

• **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 28.01%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI Intellectual Capital ESG

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 11.44 % of assets |
| Climate and Transition Risk Assessment C    |             | 73.06 % of assets |
| Climate and Transition Risk Assessment D    |             | 14.98 % of assets |
| Climate and Transition Risk Assessment E    |             | 0.52 % of assets  |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case significant harm was identified, the issuer failed the DNSH assessment, and the investment was not considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

DWS Invest CROCI Intellectual Capital ESG

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 3192.45 tCO2e              |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 205.83 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3.   | 570.57 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 3.26 % of assets           |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                       | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI Intellectual Capital ESG

| Largest investments                     | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 91.55% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 91.55% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 28.01% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 4.96% and the proportion of socially sustainable investments was 23.05%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

8.45% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>3.3 %</b>             |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.96%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 30.66%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 23.05%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 30.66%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 8.45% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. The sub-fund's assets were invested in large and mid-cap firms in any industry (in those countries classified as developed or emerging markets by the CROCI Investment and Valuation Group) that had intellectual capital according to the CROCI methodology and the systematic CROCI Intellectual Capital investment strategy. The investment strategy generally selected approximately one hundred shares out of the CROCI company coverage universe.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy might, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer were removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

##### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

##### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

• **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

• **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

• **Freedom House status**

Freedom House is an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology. .

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear

weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceed Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied, in particular, to the following asset classes:

Derivatives were not used to attain the environmental and social characteristics promoted by the sub-fund and were, therefore, not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.  
Performance: 23.33%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI Japan

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0 % of assets     |
| Climate and Transition Risk Assessment B    |             | 3.56 % of assets  |
| Climate and Transition Risk Assessment C    |             | 35.54 % of assets |
| Climate and Transition Risk Assessment D    |             | 50.43 % of assets |
| Climate and Transition Risk Assessment E    |             | 10.52 % of assets |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |
| ESG Quality Assessment A                    |             | 19.43 % of assets |
| ESG Quality Assessment B                    |             | 33.33 % of assets |

| Nuclear weapons D                           |             | 0 % of assets     |
| Nuclear weapons E                           |             | 0 % of assets     |
| Nuclear weapons F                           |             | 0 % of assets     |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case significant harm was identified, the issuer failed the DNSH assessment, and the investment was not considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest CROCI Japan

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 16.55 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI Japan

| Largest investments       | Breakdown by sector according to NACE Codes             | in % of average portfolio volume | Breakdown by country |
|---------------------------|---|----------------------------------|----------------------|
| Mitsui O.S.K. Lines       | H - Transporting and storage                            | 3.5 %                            | Japan                |
| Shin-Etsu Chemical Co.    | C - Manufacturing                                       | 3.4 %                            | Japan                |
| Nintendo Co.              | C - Manufacturing                                       | 3.4 %                            | Japan                |
| Nippon Steel              | C - Manufacturing                                       | 3.4 %                            | Japan                |
| Takeda Pharmaceutical Co. | C - Manufacturing                                       | 3.4 %                            | Japan                |
| Kyocera Corp.             | M - Professional, scientific and technical activities   | 3.4 %                            | Japan                |
| TDK Corp.                 | C - Manufacturing                                       | 3.4 %                            | Japan                |
| Sekisui House             | F - Construction  | 3.3 %                            | Japan                |
| Sumitomo Metal Mining Co. | B - Mining and quarrying                                | 3.3 %                            | Japan                |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.99% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.99% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 23.33% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 4.33% and the minimum share of socially sustainable investments was 19%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0.01% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI Japan

| NACE-Code   | Breakdown by sector according to NACE Codes         | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying                                | 3.4 %                    |
| C   | Manufacturing                                       | 64.1 %                   |
| D   | Electricity, gas, steam and air conditioning supply | 3.0 %                    |
| F   | Construction  | 3.4 %                    |

| N   | Administrative and support service activities       | 3.2 %                    |
| NA  | Other   | -0.5 %                   |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>16.6 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.33%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.25%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 19%. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.25%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.01% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as its main investment strategy. The sub-fund's assets were invested predominantly in large-cap Japanese equities that were considered undervalued according to the CROCI methodology and the CROCI Japan investment strategy.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was an integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, be eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy did, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer were removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations, as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House is an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were

labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company decided temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, the Freedom House status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest CROCI Sectors Plus

**Legal entity identifier:** 22210022CF2RMX28PD07

**ISIN:** LU1278917452

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology, as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as an indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as an indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** were used as an indicator for a company's involvement in controversial weapons.

Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI Sectors Plus

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest CROCI Sectors Plus

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 50.47 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI Sectors Plus

| Largest investments                        | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |
|--|---|----------------------------------|----------------------|

| Pioneer Natural Resources Co.              | B - Mining and quarrying                              | 3.3 %                            | United States        |
| TotalEnergies                              | M - Professional, scientific and technical activities | 3.3 %                            | France               |
| Kyocera Corp.                              | M - Professional, scientific and technical activities | 3.3 %                            | Japan                |
| EOG Resources                              | B - Mining and quarrying                              | 3.3 %                            | United States        |
| LyondellBasell Industries                  | K - Financial and insurance activities                | 3.3 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 99.69% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 99.69% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0.31% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI Sectors Plus

| NACE-Code   | Breakdown by sector according to NACE Codes       | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying                              | 21.7 %                   |
| C   | Manufacturing                                     | 54.9 %                   |
| J   | Information and communication                     | 4.0 %                    |

| NA  | Other   | 0.4 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>50.5 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 5.26%.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 5.26%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0.31% of the sub-fund's net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund's assets were invested predominantly in large-cap global equities, which were considered undervalued according to the CROCI methodology and the CROCI Sectors Plus investment strategy. Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was an integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### • **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy did, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer was removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### • **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### • **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations, as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### • **Freedom House Status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology. .

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied, in particular, to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., regarding compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeded a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promoted a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 20.41%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI US

| Indicators                                  | Description | Performance                                 |

| Nuclear weapons D                           | -           | 0 % of assets                               |
| Nuclear weapons E                           | -           | 0 % of assets                               |
| Nuclear weapons F                           | -           | 0 % of assets                               |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climate & Transition Risk Assessment     |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructor (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructor (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case significant harm was identified, the issuer failed the DNSH assessment, and the investment was not considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest CROCI US

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 31.45 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 20.41% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable). Thereof the minimum share of sustainable investments with an environmental objective that were not compliant with the EU taxonomy was 3.43% and the minimum share of socially sustainable investments was 16.98%. The actual share of sustainable investments with an environmental objective that was not compliant with the EU taxonomy, and of socially sustainable investments, depended on the market situation and the investable investment universe.

0% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI US

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>31.4 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 3.43%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 24.45%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 16.98%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 24.45%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund's assets were invested predominantly in large-cap US equities that were considered undervalued according to the CROCI methodology and the CROCI US investment strategy.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was an integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was, in general, eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy did, in some cases, continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer were removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, the Freedom House status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets could be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest CROCI US Dividends

**Legal entity identifier:** 5493002IABFLPMN5KN63

**ISIN:** LU1769942746

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

**Yes**

**No**

it made **sustainable investments with an environmental objective:** \_\_\_\_%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** \_\_\_\_%

It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of \_\_\_\_% of sustainable investments.

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did **not make any sustainable investments**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as an indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as an indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as an indicator for a company's involvement in controversial weapons.  
Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI US Dividends

| Indicators                               | Description | Performance       |
|--|-------------|-------------------|
| <b>Sustainability indicators</b>         |             |                   |

| Nuclear weapons E          | - | 0 % of assets |
| Nuclear weapons F          | - | 0 % of assets |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section “How were the indicators for adverse impacts on sustainability factors taken into account?”.

## DWS Invest CROCI US Dividends

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAIL - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 32.62 % of assets |
| PAIL - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAIL - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI US Dividends

| Largest investments           | Breakdown by sector according to NACE Codes                              | in % of average portfolio volume | Breakdown by country |
|-------------------------------|--|----------------------------------|----------------------|

| J.M. Smucker Co.              | C - Manufacturing  | 2.5 %                            | United States        |
| Texas Instruments             | C - Manufacturing  | 2.5 %                            | United States        |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.91%

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI US Dividends

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>32.6 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.57%.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 23.57%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. The sub-fund's assets were invested predominantly in large-cap US equities that were considered undervalued and offered comparatively high and sustainable dividend yields according to the CROCI methodology and the CROCI US Dividends investment strategy.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was an integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset was in general eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy did in some cases continue to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy, such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer was removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks, received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House was an international non-governmental organization that classified countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were

labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that was used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets might have been invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.  
Performance: 0%
- **DWS SDG Investment Assessment** is used as indicator to measure the allocation to issuers contributing to the UN SDGs.  
Performance: No investments in suboptimal assets

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest Asian Small/Mid Cap

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

How did this financial product consider principal adverse impacts on sustainability factors?

For the sub-fund the Company considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Disclosure Regulation:

- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Activities negatively affecting biodiversitysensitive areas (no. 7);
- Emissions to water (no. 8);
- Hazardous waste and radioactive waste ratio (no. 9);
- Violation of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (no. 14).

For sustainable investments, the principal adverse impacts were further considered in the DNSH assessment as described above in section “How were the indicators for adverse impacts on sustainability factors taken into account?”.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest CROCI World SDG

| Indicators   | Description  | Performance            |
|--|--|------------------------|
| <b>Principal Adverse Impact</b>  |  |                        |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)             | 0 tCO2e / million EUR  |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 0 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector   | 0 % of assets          |
| PAII - 07. Activities negatively affecting biodiversity sensitive areas                    | Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas | 0 % of assets          |
| PAII - 08. Emissions to water  | Waste water discharged (metric tons) into surface waters as a result of industrial or manufacturing activities.  | 0 tonnes / million EUR |
| PAII - 09. Hazardous waste ratio   | Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average  | 0 tonnes / million EUR |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                       | 0 % of assets          |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)  | 0 % of assets          |

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

#### What were the top investments of this financial product?

#### DWS Invest CROCI World SDG

| Largest investments      | Breakdown by sector according to NACE Codes | in % of average portfolio volume | Breakdown by country |
|--------------------------|---|----------------------------------|----------------------|

for the period from January 01, 2023, through April 11, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through April 11, 2023

#### What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 0% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.97%

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

As of the liquidation date April 11, 2023, this sub-fund invested 0% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 0% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

100% of the net sub-fund assets did not meet the advertised ecological and social characteristics as of the liquidation date April 11, 2023.

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI World SDG

| NACE-Code | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|-----------|---|--------------------------|
|           | Bank balances and other                                       | 100 %                    |
|           | <b>Exposure to companies active in the fossil fuel sector</b> | 0.0 %                    |

As of: April 11, 2023

This sub-funds was liquidated on April 11, 2023. There were no assets in the portfolio as of the liquidation date. Therefore, no allocation of sectors could be made. Further information can be found in the asset overview in the annual report.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was %.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was %.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 100% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as main investment strategy. The sub-fund's assets were invested predominantly large cap, European equities that were considered undervalued according to the CROCI methodology and the CROCI Europe SDG investment strategy, and that were considered to be in a position to profit from present or future geopolitical, social and economic trends and themes which had a positive contribution to the fulfilment of the United Nations Sustainable Development Goals (UN SDGs). The sub-fund manager considered in its asset allocation the resulting scores from the SDG investment methodology. At least 80% of the investment strategy's (and consequently the sub-fund's) net assets were invested in issuers that were classified in the highest three scores (letter scores "A" to "C") of the proprietary letter score from the application of the DWS SDG investment assessment.

Further details regarding the main investment strategy are specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental or social characteristics was integral part of the ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in relation to climate change and environmental changes, e.g., in respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to such risks received better evaluations. Issuers with excessive climate risk profile (i.e., a letter score of "F") were excluded as an investment. Issuers with high climate risk profile (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "E" subsequently exceeded 5% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in climate risk rating of individual issuers), the investment strategy (and consequently the sub-fund) might in some cases continued to hold an allocation exceeding 5% in issuers with high climate risk profile until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behaviour of issuers, e.g., within the framework of the principles of the United Nations Global Compact, the standards of the International Labour Organization and behaviour within generally accepted international standards and principles. The Norm Assessment examined, e.g., human rights violations, violations of workers' rights, child or forced labour, adverse environmental impacts, and business ethics. Issuers with highest severity of norm issues (i.e., a letter score of "F") were excluded as an investment. Issuers with high severity of norm issues (i.e., a letter score of "E") were limited to 5% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "E" subsequently exceeded 5% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in norm assessment rating of individual issuers), the investment strategy (and consequently the sub-fund) might in some cases continue to hold an allocation exceeding 5% in issuers with high severity of norm issues until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **• DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between corporate and sovereign issuers.

For corporate issuers, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross vendor consensus on overall ESG assessment (best-in-class approach), for example concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group was composed of issuers from the same sector in the same region. Issuers rated better in this peer group comparison receive a better score, while issuers rated worse in the comparison received a worse score. Corporate issuers rated poorly compared to their peer group (i.e., a letter score of "E" or "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment evaluated a countries' governance from a holistic perspective taking into account, among other things, the assessment of political and civil liberties. Sovereign issuers with high or excessive controversies regarding governance (i.e., a letter score of "E" or "F") were excluded as an investment.

Further, issuers with a letter score of "D" in the DWS ESG Quality Assessment were limited to 15% of the sub-fund's net assets at the time when the investment strategy was periodically reconstituted in accordance with the investment strategy's rules. However, if the investment strategy's allocation to issuers with letter score "D" subsequently exceeds 15% (due to drifts in portfolio weights because of differential price performance between holdings, or due to a change in norm assessment rating of individual issuers), the investment strategy (and consequently the sub-fund) may in some cases continued to hold an allocation exceeding 15% in issuers with a letter score of "D" until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months.

### **Exposure to controversial sectors**

The ESG database defined specific business areas and operations as relevant. Business areas and business activities that included production or concerned the distribution of products in a controversial area ("controversial sectors"). As controversial sectors were, for example, civilian firearms, defense industry, tobacco products and adult entertainment defined. Other business areas were considered relevant. Business activities defined as the production or distribution of products in others areas were concerned.

Other relevant areas included, for example, nuclear energy or coal mining coal-based energy production.

Issuers were rated according to the share of total revenue they generated in controversy business areas and controversial business activities. The lower the percentage Share of sales from the controversial business areas and controversial ones business activities, the better the rating was. Issuers (with the exception of target funds) with medium, high or excessive participation (i.e. a "D", "E" or "F" rating) were considered Investment excluded. Regarding participation in mining of coal and coal-based energy production was issued by issuers (with the exception of target funds) with high or excessive levels participation (i.e. an "E" or "F" rating) were excluded as an investment.

### **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

Issuers were classified according to the level of their involvement (production of controversial weapons, production of components, etc.) in the production of controversial weapons regardless of the total revenue they generated from this was assessed. Issuers (with the exception of target funds). Medium, high or excessive participation (i.e. a "D", "E" or "F" rating) were considered excluded from investment.

### **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded. Issuers were excluded based on the following criteria:

Deviating from the above regulation were bonds that met the criteria of the ESG assessment methodology not fully met, suitable for investment if they meet the criteria corresponded to the DWS assessment of the intended use of the bond proceeds. The financing of dedicated bonds was evaluated in a two-stage process. In the first stage, DWS assessed whether a bond met the criteria for a specific purpose bond fulfilled. An essential element was checking conformity with the requirements of the International Capital Market Association (ICMA) Green Bond Principles, Social Bond Principles or Sustainability Bond Principles. The review focused on the use of the proceeds, the selection of projects financed with these proceeds, that management of revenue-financed expenses as well as annual reports to investors on the use of proceeds. If a bond met these principles, the ESG quality of the bond was assessed in the second stage bond issuers based on defined minimum standards with regard to ecological, social and factors relating to corporate governance were confirmed. This review was based on the one above ESG assessment methodology described and excluded the following issuers:

- Companies with poor ESG quality compared to their peer group (i.e. a "E" or "F" rating),
- Sovereign issuers with high or excessive governance controversies (i.e. an "E" or "F" rating),
- Issuers with the highest severity of norm violations (i.e. an "F" rating) or
- Issuers with excessive involvement in controversial arms deals (i.e. a "D", "E" or "F" rating).

To the extent that the sub-fund has the advertised ecological and social characteristics as well as the corporate governance practices also sought through investments in target funds, the latter had to comply with the above DWS standards related to climate and transition risk, norms and DWS ESG quality assessment (except the assessment of states).

The environmental or social characteristics advertised by the sub-fund have not been endorsed by the use of derivatives achieved. Derivatives were therefore used when calculating the minimum share of the assets that met these characteristics were not taken into account. Derivatives on individual issuers were only allowed to be acquired for the sub-fund if the issuers of the underlying asset met the criteria of the ESG assessment methodology.

Supplementary liquid assets have not been assessed using the ESG assessment methodology.

### **DWS SDG investment assessment methodology**

The UN SDG contribution of an issuer was measured by dedicated scores, which were the result of DWS SDG investment assessment. Issuers were identified and scored essentially based on their positive and negative contribution to the UN SDGs. In addition, the methodology identifies risk and adjusted SDG scores accordingly.

The sub-fund management considered in its allocation the resulting scores from the DWS SDG investment assessment and invested in issuers that were classified in the highest three scores (i.e., letter scores "A" - "C"). Issuers with a low SDG score (i.e., a letter score "E" or "F") were excluded as an investment.

In addition, issuers with a "D" rating are included in the DWS SDG assessment of investments. Timing of the regular recomposition of the investment strategy in accordance with the rules of the Investment strategy limited to 15% of the net sub-fund assets. Will the cap of 15% for Issuers with a "D" rating subsequently exceeded (due to shifts in the portfolio weightings based on different price developments of the positions or one change in the rating of individual issuers in the DWS SDG assessment of investments), the investment strategy (and therefore the sub-fund) can in some cases be up to to the next regular recomposition of the investment strategy, potentially for a period of time of up to three months, continue to have a share of more than 15% in issuers with a "D" Keep rating.

### DWS methodology for determining sustainable investments

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

In addition, the management company considers active ownership to be very effective means to improve corporate governance, policies and procedures and to a better long-term performance of the investee companies. Active ownership means that position as a shareholder to influence the activities or behavior of the to use investment companies. A constructive dialogue can be held with the portfolio companies on topics such as strategy, financial and non-financial performance, risk, capital structure, social and ecological impacts and corporate governance, including topics such as Disclosure, culture and compensation. For example, a dialogue can be about Issuer meetings or mandate agreements can be exercised. This is also the case with equity investments an interaction with the company through the exercise of voting rights (proxy voting) or participation possible at general meetings.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest CROCI World Value

**Legal entity identifier:** 549300EKCGWXZNQZVH81

**ISIN:** LU1769941003

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as the political-civil freedom of a country through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) countries flagged as "not free" by Freedom House,
- (4) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (5) companies involved in controversial weapons.

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics, as well as sustainable investment, was assessed via the application of an in-house DWS ESG assessment methodology as further described in the section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as an indicator for an issuer's exposure to climate and transition risks.  
Performance: No investments in suboptimal assets
- **DWS Norm Assessment** was used as an indicator for a company's exposure to norm-related issues towards international standards.  
Performance: No investments in suboptimal assets
- **Freedom House Status** was used as an indicator for the political-civil freedom of a country.  
Performance: No investments in suboptimal assets
- **Exposure to controversial sectors** was used as an indicator for a company's involvement in controversial sectors.  
Performance: 0%
- **DWS exclusions for controversial weapons** was used as an indicator for a company's involvement in controversial weapons.  
Performance: 0%

Please see the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?" for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest CROCI World Value

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 1 % of assets     |
| Climate and Transition Risk Assessment B    |             | 5.01 % of assets  |
| Climate and Transition Risk Assessment C    |             | 42.02 % of assets |
| Climate and Transition Risk Assessment D    |             | 24.81 % of assets |
| Climate and Transition Risk Assessment E    |             | 27.29 % of assets |
| Climate and Transition Risk Assessment F    |             | 0 % of assets     |

As of: December 31, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

## DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors <sup>*(1)</sup> | Involvement in controversial weapons           | Norm Assessment <sup>*(6)</sup>                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|--|--|--|--|---|--|
| <b>A</b> | Non-involvement                                      | Confirmed non-involvement                      | Confirmed no issues  | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                                   | Alleged  | Violations of lesser degree                                    | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%  | Dual-Purpose <sup>*(2)</sup>                   | Violations of lesser degree                                    | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                            | Owning <sup>*(3)</sup> / Owned <sup>*(4)</sup> | Violation of lesser degree                                     | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)                          | Component Producer <sup>*(5)</sup>             | High severity or re-assessed highest violation <sup>*(7)</sup> | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%   | Weapon producer                                | Highest severity / global compact violation <sup>*(8)</sup>    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

<sup>\*(1)</sup> Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

<sup>\*(2)</sup> Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

<sup>\*(3)</sup> Owning more than 20% equity.

<sup>\*(4)</sup> Being owned by more than 50% of company involved in grade E or F.

<sup>\*(5)</sup> Single purpose key component.

<sup>\*(6)</sup> Includes ILO controversies as well as corporate governance and product issues.

<sup>\*(7)</sup> In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

<sup>\*(8)</sup> An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons, and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described above in the section "How were the indicators for adverse impacts on sustainability factors taken into account?".

## DWS Invest CROCI World Value

| Indicators   | Description   | Performance       |
|--|---|-------------------|
| <b>Principal Adverse Impact</b>  |   |                   |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 35.81 % of assets |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets     |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets     |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest CROCI World Value

| Largest investments              | Breakdown by sector according to NACE Codes           | in % of average portfolio volume | Breakdown by country |

| Repsol                           | M - Professional, scientific and technical activities | 1.0 %                            | Spain                |
| Compagnie de Saint-Gobain (C.R.) | M - Professional, scientific and technical activities | 1.0 %                            | France               |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 100% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 100%

### Asset allocation

describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 100% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics).

0% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was not tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest CROCI World Value

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|

| NA  | Other  | 1.1 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>35.8 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |                |
|---------------------------------------|----------------|
| Taxonomy-aligned: Fossil gas          | 0.00%          |
| Taxonomy-aligned: Nuclear             | 0.00%          |
| Taxonomy-aligned (no gas and nuclear) | 0.00%          |
| <b>Taxonomy-aligned</b>               | <b>0.00%</b>   |
| <b>Non Taxonomy-aligned</b>           | <b>100.00%</b> |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The sub-fund did not promote a minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.17%.

What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments. There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 17.17%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 0% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, all investments could be invested in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. Incomplete data was tolerated in the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could include all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could be used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on equities as the main investment strategy. At least 60% of the sub-fund's assets were invested in large cap developed market global equities that were considered undervalued according to the CROCI methodology and the CROCI World Value investment strategy.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated into investments that complied with the defined standards in respect to the promoted environmental and social characteristics as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets via an in-house DWS ESG assessment methodology, regardless of their economic prospects for success and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches as further detailed below. Individual assessment approaches were based on a letter scale from "A" to "F". Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including, for example, related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the investment strategy (and consequently the sub-fund) was prohibited from investing in that issuer or that asset, even if this issuer or this asset would, in general, be eligible according to the other assessment approaches. However, if the investment strategy held an issuer whose score in one of the relevant ESG assessment approaches subsequently deteriorated to a score deemed insufficient (for new investments) in that assessment approach, the investment strategy may, in some cases, continued to hold such an issuer until the next regularly scheduled reconstitution of the investment strategy, potentially for a period of up to three months. If at the next regularly scheduled reconstitution of the investment strategy such issuer's score was still deemed insufficient in one of the relevant ESG assessment approaches, assets of such issuer were removed from the investment strategy (and consequently the sub-fund) as part of the reconstitution process, in accordance with the investment strategy's rules.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **• DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **• DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to begin a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **• Freedom House Status**

Freedom House was an international non-governmental organization that classified countries by their

degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

• **Exposure to controversial sectors**

Investments in companies that were involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defense industry: at least 10%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Coal mining and power generation from coal: at least 25%
- Mining of oil sand: at least 5%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production, or coal usage, based on an internal identification methodology. .

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production. In the event of exceptional circumstances, such as measures imposed by a government to address challenges in the energy sector, the Management Company did decide to temporarily suspend the application of the coal-related exclusions to individual companies/geographical regions.

• **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions.

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in exclusion of the target fund were defined. Accordingly, assets might be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

• **Non ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS

Norm Assessment, as further detailed in the dedicated section “What actions have been taken to meet the environmental and/or social characteristics during the reference period?”. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Asian Bonds

**Legal entity identifier:** 5493009UAEL028SQYF79

**ISIN:** LU1859276286

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |

| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> <b>It promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 9.36 % of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy | <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  |
| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of:

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human and labor rights, customer and environmental safety and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section "What actions have been taken to meet the environmental and/or social characteristics during the reference period?". The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer's exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company's exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer's environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company's involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company's involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 9,36%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Asian Bonds

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    |             | 0.23 % of assets  |
| Climate and Transition Risk Assessment B    |             | 4.19 % of assets  |
| Climate and Transition Risk Assessment C    |             | 72.23 % of assets |
| Climate and Transition Risk Assessment D    |             | 19 % of assets    |

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/ or social characteristics during the reference period?".

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                 | SDG- Assessment                               | Climat & Transition Risk Assessment       |
|----------|---|--------------------------------------|---|--|---|---|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)       |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider (75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)         |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)        |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## DWS Invest ESG Asian Bonds

| Indicators   | Description   | Performance                             |
|--|---|---|
| <b>Principal Adverse Impact</b>  |   |   |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.   | 23858.34 tCO <sub>2</sub> e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO <sub>2</sub> emissions per million EUR invested. The CO <sub>2</sub> emissions of an issuer are normalised by its enterprise value including cash (EVIC). | 197.87 tCO <sub>2</sub> e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 461.81 tCO <sub>2</sub> e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.   | 8.19 % of assets                        |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.   | 0 % of assets                           |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons).              | 0 % of assets                           |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIs for individual securities or their issuers, either because no data is available or the PAI is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAI. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications. Moreover, improved data availability may have an effect on the reported PAIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 92.59% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 99.85%

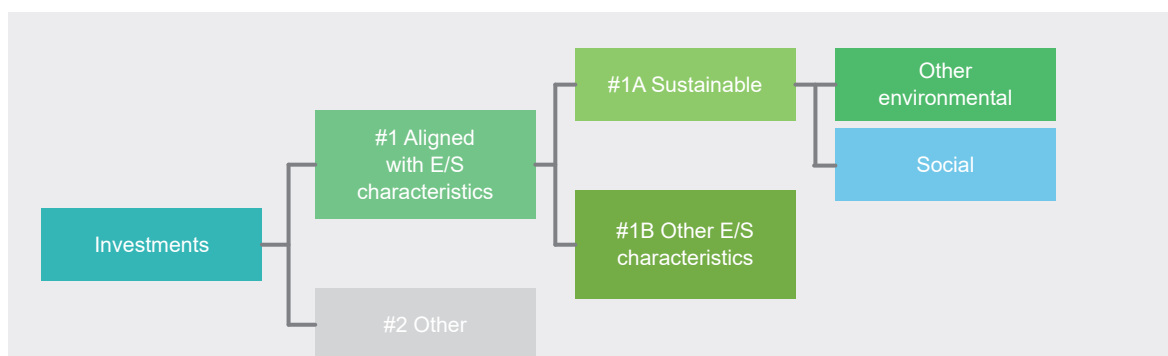

**Asset allocation** describes the share of investments in specific assets.

#### What was the asset allocation?

This sub-fund invested 92.59% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 9.36% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 4.3% and the proportion of socially sustainable investments was 5.06%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

7.41% of the net assets of the sub-fund were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the sub-fund were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

#### In which economic sectors were the investments made?

##### DWS Invest ESG Asian Bonds

| NACE-Code   | Breakdown by sector according to NACE Codes                   | in % of portfolio volume |
|---|---|--------------------------|
| B   | Mining and quarrying  | 1.7 %                    |
| C   | Manufacturing   | 7.2 %                    |
| D   | Electricity, gas, steam and air conditioning supply           | 0.4 %                    |
| F   | Construction  | 0.0 %                    |
| H   | Transporting and storage                                      | 0.8 %                    |
| J   | Information and communication                                 | 4.3 %                    |
| K   | Financial and insurance activities                            | 36.3 %                   |
| L   | Real estate activities  | 3.0 %                    |
| M   | Professional, scientific and technical activities             | 1.2 %                    |
| O   | Public administration and defence; compulsory social security | 36.3 %                   |
| NA  | Other   | 8.9 %                    |
| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>8.2 %</b>             |

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 4.3%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.61%.

#### What was the share of socially sustainable investments?

The minimum share of socially sustainable investments was 5.06%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 11.61%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 7.41% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share all investments of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

This sub-fund pursued a strategy based on bonds as its main investment strategy. The sub-fund's assets were predominantly invested in interest-bearing debt securities denominated in USD that were issued by companies based in Asia or those that conducted their principal business activity in an Asian jurisdiction. U.S. dollar bonds referred to APAC government-related bonds (Agency, Local Authority, Supranationals, and Sovereign) and corporate bonds (e.g., Industrial, Utility, Financial Institutions). The sub-fund’s assets were primarily invested in interest-bearing debt securities that had an investment-grade status at the time of acquisition. A maximum of 49% of the sub-fund’s assets were invested in interest-bearing securities that did not meet the above-mentioned criteria, cash, and money market instruments. A maximum of 10% of the sub-fund’s assets were invested in interest-bearing debt securities with a non-investment-grade status with a minimum credit rating of B3 (Moody’s) or B- (S&P/Fitch).

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund’s assets were predominantly allocated to investments that complied with the defined standards in respect of the promoted environmental and social characteristics, as described in the following sections. The sub-fund’s strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund’s investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer’s future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### • **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluated issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of “F”) were excluded as an investment.

#### • **DWS Norm Assessment**

The DWS Norm Assessment evaluated the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization and behavior within generally accepted international standards and principles. The DWS Norm Assessment examined, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts and business ethics. The assessment considered violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) were excluded as an investment.

#### • **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

#### • **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of “F”) were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a sovereign based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of “F”) were excluded as an investment.

#### • **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as “not free” by Freedom House were excluded.

#### • **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas (“controversial sectors”) were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

• **DWS exclusions for controversial weapons**

Companies were excluded if they are identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons or uranium munitions. In addition, the shareholdings within a group structure could also be taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

• **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers is nevertheless permitted if the particular requirements for use-of-proceeds bonds are met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that do not meet these criteria were excluded.

Issuers were excluded based on the following criteria:

- Companies and sovereign issuers with the worst DWS ESG Quality Assessment score in the peer group comparison (i.e., a letter score of “F”);
- Sovereign issuers labelled as “not free” by Freedom House;
- Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”);
- Companies that are directly involved in one or more very severe, unresolved controversies related to the UN Global Compact;
- Companies with involvement in controversial weapons; or
- Companies with identified coal expansion plans

• **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure are taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that result in exclusion of the target fund were defined. Accordingly, assets may be invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

• **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and are therefore not taken into account for the calculation of the minimum proportion of assets that comply with these characteristics. However, derivatives on individual issuers may only be acquired for the sub-fund if the issuers of the underlyings comply with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

**DWS methodology for determining sustainable investments was defined in article 2(17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluated potential investments in relation to different criteria to conclude that an investment can be considered sustainable as further detailed in section “What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?”.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies follow good governance practices. How did this financial product perform compared to the reference sustainable benchmark?

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

This sub-fund promoted environmental and social characteristics related to climate, governance and social norms as well as general ESG quality through the avoidance of issuers (1) exposed to high or excessive climate and transition risks, (2) exposed to high or highest severity of norm issues (i.e. as regards compliance with international standards of corporate governance, human rights and labour rights, customer and environment safety and business ethics), (3) exposed to high or excessive environmental, social and governance risks compared to their peer group, (4) moderately, highly or excessively exposed to controversial sectors and controversial activities, and/or (5) involved in controversial weapons.

This sub-fund further promoted a minimum proportion of environmentally sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund had not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

## How did the sustainability indicators perform?

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period? ”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 39.85%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Climate Tech

| Indicators                                  | Description | Performance       |
|---|-------------|-------------------|
| <b>Sustainability indicators</b>            |             |                   |
| Climate and Transition Risk Assessment A    | -           | 11.1 % of assets  |
| Climate and Transition Risk Assessment B    | -           | 24.19 % of assets |
| Climate and Transition Risk Assessment C    | -           | 28.5 % of assets  |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled "What actions were taken to meet the environmental and/or social characteristics during the reference period?"

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled "How did this financial product consider principal adverse impacts on sustainability factors?"

### DWS ESG-Assessment Scale

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructor (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructor (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g., weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that relate to environmental objectives, such as the following (non-exhaustive list):

- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment can be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that made a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of “F”) could not be considered sustainable and were excluded as an investment.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section “How have the indicators for adverse impacts on sustainability factors been taken into account?”.

## DWS Invest ESG Climate Tech

| Indicators   | Description  | Performance                |
|--|--|----------------------------|
| <b>Principal Adverse Impact</b>  |  |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                                | 266095.71 tCO2e            |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC).            | 351.11 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3  | 840.77 tCO2e / million EUR |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector.  | 31.29 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

## What were the top investments of this financial product?

### DWS Invest ESG Climate Tech

| Largest investments    | Breakdown by sector according to NACE Codes                             | in % of average portfolio volume | Breakdown by country   |
|------------------------|---|----------------------------------|------------------------|
| Republic Services      | E - Water supply; sewerage; waste management and remediation activities | 3.3 %                            | United States          |

| Mowi                   | A - Agriculture, forestry and fishing                                   | 1.8 %                            | Norway                 |
| Signify                | C - Manufacturing   | 1.8 %                            | Netherlands            |

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 93.34% of portfolio assets.

Proportion of sustainability-related investments for the previous year: 97.18%

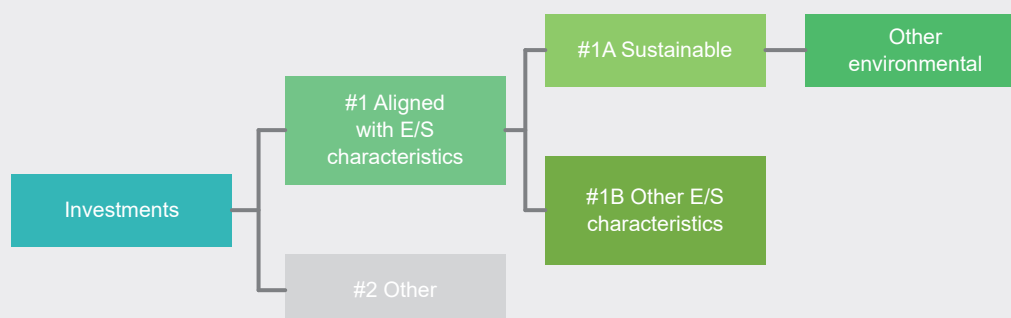

**Asset allocation** describes the share of investments in specific assets.

## What was the asset allocation?

This sub-fund invested 93.34% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S characteristics). Within this category, 39.85% of the sub-fund's net assets qualified as sustainable investments (#1A Sustainable).

The actual share of sustainable investments with an environmental objective that were not compliant with the EU Taxonomy was 30.66%.

6.66% of the sub-fund's net assets were invested in all permissible assets for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund's net assets were tolerated in assets for which there was no complete data coverage with respect to the above-described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

**#1 Aligned with E/S characteristics** includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

**#2 Other** includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

#### DWS Invest ESG Climate Tech

| NACE-Code   | Breakdown by sector according to NACE Codes                          | in % of portfolio volume |
|---|--|--------------------------|
| A   | Agriculture, forestry and fishing                                    | 1.9 %                    |
| C   | Manufacturing  | 37.4 %                   |
| D   | Electricity, gas, steam and air conditioning supply                  | 5.1 %                    |

| <b>Exposure to companies active in the fossil fuel sector</b> |  | <b>31.3 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**

Are economic activities for yet low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

1. Taxonomy-alignment of investments including sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

2. Taxonomy-alignment of investments excluding sovereign bonds\*

|                                       |         |
|---------------------------------------|---------|
| Taxonomy-aligned: Fossil gas          | 0.00%   |
| Taxonomy-aligned: Nuclear             | 0.00%   |
| Taxonomy-aligned (no gas and nuclear) | 0.00%   |
| Taxonomy-aligned                      | 0.00%   |
| Non Taxonomy-aligned                  | 100.00% |

This graph represents 100% of the total investments.

\*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

#### What was the share of investments made in transitional and enabling activities?

The sub-fund did not have a minimum share of investments in transitional or enabling activities, as it did not commit to a minimum proportion of environmentally sustainable investments aligned with the EU Taxonomy.

#### How did the percentage of investments that are aligned with the EU Taxonomy compare with previous reference periods?

The promoted proportion of environmentally sustainable investments in accordance with Regulation (EU) 2020/852 (Taxonomy Regulation) was 0% of the fund's assets in the current as well as previous reference periods. It may, however, have been the case that some sustainable investments were nevertheless aligned with an environmental objective of the Taxonomy Regulation.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the Regulation (EU) 2020/852.

#### What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy

The minimum share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 30.66%.

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 38.68%.

#### What was the share of socially sustainable investments?

The sub-fund did not promote a minimum share of socially sustainable investments

There was no minimum proportion for sustainable investments with an environmental objective not aligned with the EU Taxonomy in the previous year. The total share of environmentally and socially sustainable investments therefore was 38.68%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

This sub-fund promoted a predominant asset allocation in investments that were aligned with environmental and social characteristics (#1 Aligned with E/S characteristics). In addition, this sub-fund invested 6.66% of the sub-fund’s net assets into investments for which either the DWS ESG assessment methodology was not applied or for which ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the sub-fund’s net assets were tolerated in assets for which there was no complete data coverage with respect to the above described ESG assessment approaches and exclusions. This tolerance did not apply to the assessment of good governance practices (by means of the DWS Norm Assessment).

These other investments could have included all asset classes as foreseen in the specific investment policy, including deposits with credit institutions and derivatives.

Other investments could have used by the portfolio management for performance, diversification, liquidity and hedging purposes.

Minimum environmental or social safeguards were not or only partially considered for this sub-fund within the other investments.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The sub-fund pursued a strategy based on equities as its main investment strategy. The sub-fund invested in equities and in equity-linked instruments that were primarily active in business areas suited to restricting or reducing climate change, specifically companies offering products, services, and solutions helping to lower emissions by generating clean energy, transmitting energy efficiently, or increasing energy efficiency. Additionally, it included companies that were active in climate change impact management across areas like health, water, agriculture, or disaster prevention/recovery. Therefore, at least 75% of the sub-fund's assets were invested in equities of all market capitalizations, stock certificates, participation and dividend right certificates, convertible bonds, and equity warrants issued by foreign and domestic companies. Up to 25% of the sub-fund's assets were invested in short-term deposits, money market instruments, and bank balances.

Further details regarding the main investment strategy were specified in the Special Section of the Sales Prospectus.

The sub-fund's assets were predominantly allocated to investments that complied with the defined standards in respect to the promoted environmental and social characteristics, as described in the following sections. The sub-fund's strategy in relation to the promoted environmental and social characteristics was an integral part of the DWS ESG assessment methodology, which was continuously monitored via the sub-fund's investment guidelines.

#### **DWS ESG assessment methodology**

The sub-fund aimed to achieve the promoted environmental and social characteristics by assessing potential assets through an in-house DWS ESG assessment methodology, regardless of their economic prospects for success, and by applying exclusion criteria based on this assessment. The DWS ESG assessment methodology was based on the DWS ESG database, which used data from several ESG data providers, public sources, and/or internal assessments to arrive at derived overall scores. Internal assessments took into account factors such as an issuer's future expected ESG developments, plausibility of data with regard to past or future events, the willingness to engage in dialogue on ESG matters, and ESG-related decisions of a company.

The DWS ESG database derived coded scores within different assessment approaches, as detailed below. Individual assessment approaches were based on a letter scale from "A" to "F." Each issuer received one of six possible scores, with "A" representing the highest score and "F" representing the lowest score on the scale. Within other assessment approaches, the DWS ESG database provided separate assessments, including those related to revenues earned from controversial sectors or the degree of involvement in controversial weapons. If an issuer's score in one assessment approach was deemed insufficient, the sub-fund was prohibited from investing in that issuer or that asset, even if this issuer or asset would generally be eligible according to the other assessment approaches.

The DWS ESG database used, among others, the following assessment approaches to evaluate whether issuers/assets complied with the promoted environmental and social characteristics and whether companies in which investments were made applied good governance practices:

#### **DWS Climate and Transition Risk Assessment**

The DWS Climate and Transition Risk Assessment evaluates issuers in the context of climate change and environmental changes, for example, with respect to greenhouse gas reduction and water conservation. Issuers that contributed less to climate change and other negative environmental changes or were less exposed to these risks received better scores. Issuers with an excessive climate and transition risk profile (i.e., a letter score of "F") were excluded as an investment.

#### **DWS Norm Assessment**

The DWS Norm Assessment evaluates the behavior of companies, for example, within the framework of the principles of the UN Global Compact, the standards of the International Labour Organization, and behavior within generally accepted international standards and principles. The DWS Norm Assessment examines, for example, human rights violations, violations of workers' rights, child or forced labor, adverse environmental impacts, and business ethics. The assessment considers violations of the aforementioned international standards. These were assessed using data from ESG data providers and/or other available information, such as the expected future developments of these violations as well as the willingness of the company to engage in a dialogue on related business decisions. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") were excluded as an investment.

#### **UN Global Compact Assessment**

In addition to the DWS Norm Assessment, companies were excluded if they were directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

## **DWS ESG Quality Assessment**

The DWS ESG Quality Assessment distinguished between companies and sovereign issuers.

For companies, the DWS ESG Quality Assessment allowed for a peer group comparison based on cross-vendor consensus on the overall ESG assessment (best-in-class approach), for example, concerning the handling of environmental changes, product safety, employee management, or corporate ethics. The peer group for companies was made up from the same industry sector. Companies that scored higher in this comparison received a better score, while companies that scored lower in the comparison received a worse score. Companies with the lowest score relative to their peer group (i.e., a letter score of "F") were excluded as an investment.

For sovereign issuers, the DWS ESG Quality Assessment assessed a country based on numerous ESG criteria. Indicators for environmental aspects were, for example, handling of climate change, natural resources, and vulnerability to disasters; indicators for social aspects included the attitude to child labor, equality, and prevailing social conditions; and indicators for good governance were, for example, the political system, the existence of institutions, and the rule of law. In addition, the DWS ESG Quality Assessment explicitly considered the civil and democratic liberties of a country. Sovereign issuers with the lowest score in the peer group comparison (separate groups for developed countries and emerging markets) (i.e., a letter score of "F") were excluded as an investment.

## **Freedom House status**

Freedom House was an international non-governmental organization that classifies countries by their degree of political freedom and civil liberties. Based on the Freedom House status, countries that were labeled as "not free" by Freedom House were excluded..

## **Exposure to controversial sectors**

Investments in companies that are involved in certain business areas and business activities in controversial areas ("controversial sectors") were excluded. Companies were excluded from the portfolio as follows, according to their share of total revenues generated in controversial sectors.

Revenue thresholds for exclusion of controversial sectors:

- Manufacturing of products and/or provision of services in the defence industry: at least 5%
- Manufacturing and/or distribution of civil handguns or ammunition: at least 5%
- Manufacturing of tobacco products: at least 5%
- Manufacturing of products in and/or provision of services for the gambling industry: at least 5%
- Manufacturing of adult entertainment: at least 5%
- Manufacturing of palm oil: at least 5%
- Nuclear power generation and/or uranium mining and/or uranium enrichment: at least 5%
- Extraction of crude oil: at least 10%
- Unconventional extraction of crude oil and/or natural gas (including oil sand, oil shale/shale gas, Arctic drilling): more than 0%
- Coal mining: at least 1%
- Power generation from coal: at least 10%
- Coal mining and oil extraction: at least 10%
- Power generation from and other use of fossil fuels (excluding natural gas): at least 10%
- Mining and exploration of and services in connection with oil sand and oil shale: at least 10%

The sub-fund excluded companies with coal expansion plans, such as additional coal mining, coal production or coal usage, based on an internal identification methodology.

The aforementioned coal-related exclusions only applied to so-called thermal coal, i.e., coal that is used in power stations for energy production.

## **DWS exclusions for controversial weapons**

Companies were excluded if they were identified as manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons, nuclear weapons, depleted uranium weapons, or uranium munitions. In addition, the shareholdings within a group structure were also taken into consideration for the exclusions. Furthermore, companies that were identified as manufacturers or manufacturers of key components of incendiary bombs containing white phosphorus were excluded.

## **DWS Use of Proceeds Bond Assessment**

Deviating from the assessment approaches described above, an investment in bonds of excluded issuers was nevertheless permitted if the particular requirements for use-of-proceeds bonds were met. In this case, the bond was first checked for compliance with the ICMA Principles for green bonds, social bonds, or sustainability bonds. In addition, a defined minimum of ESG criteria was checked in relation to the issuer of the bond, and issuers and their bonds that did not meet these criteria were excluded.

### **DWS Target Fund Assessment**

The DWS ESG database assessed target funds in accordance with the DWS Climate and Transition Risk Assessment, DWS Norm Assessment, UN Global Compact Assessment, DWS ESG Quality Assessment, the Freedom House Status, and with respect to investments in companies that were considered to be manufacturers or manufacturers of key components of anti-personnel mines, cluster munitions, chemical and biological weapons (the shareholdings within a group structure were taken into consideration accordingly). The assessment methods for target funds were based on examining the entire target fund portfolio, taking into account the investments within the target fund portfolio. Depending on the respective assessment approach, exclusion criteria (such as tolerance thresholds) that resulted in the exclusion of the target fund were defined. Accordingly, assets were invested within the portfolios of the target funds that were not compliant with the DWS standards for issuers.

### **Non-ESG assessed asset classes**

Not every asset of the sub-fund was assessed by the DWS ESG assessment methodology. This applied in particular to the following asset classes:

Derivatives were currently not used to attain the environmental and social characteristics promoted by the sub-fund and were therefore not taken into account for the calculation of the minimum proportion of assets that complied with these characteristics. However, derivatives on individual issuers were only acquired for the sub-fund if the issuers of the underlyings complied with the DWS ESG assessment methodology.

Deposits with credit institutions were not evaluated via the DWS ESG assessment methodology.

### **DWS methodology for determining sustainable investments was defined in article 2 (17) SFDR (DWS Sustainability Investment Assessment)**

Further, for the proportion of sustainable investments DWS measured the contribution to one or several UN SDGs via its DWS Sustainability Investment Assessment which evaluates potential investments in relation to different criteria to conclude that an investment can be considered as sustainable.

The applied ESG investment strategy did not pursue a committed minimum reduction of the scope of the investments.

The assessment of the good governance practices of the investee companies was based on the DWS Norm Assessment. Accordingly, the assessed investee companies followed good governance practices.

How did this financial product perform compared to the reference sustainable benchmark?

This sub-fund has not designated a specific reference benchmark to determine its alignment with the environmental and/or social characteristics it promotes.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for financial products referred to in Article 8, paragraph 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

**Sustainable investment** means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

**Product name:** DWS Invest ESG Dynamic Opportunities

**Legal entity identifier:** 549300F0344VG88EO126

**ISIN:** LU1868537090

**Environmental and/or social characteristics**

**Did this financial product have a sustainable investment objective?**

| <input checked="" type="radio"/> <input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>                       | <input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>   |
|--|--|
| <input type="checkbox"/> it made <b>sustainable investments with an environmental objective</b> : ____%                  | <input checked="" type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 22.83% of sustainable investments. |
| <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy        | <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  |

| <input type="checkbox"/> It made <b>sustainable investments with a social objective</b> : ____%                          | <input checked="" type="checkbox"/> with a social objective  |
| <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>            | <input type="checkbox"/> It promoted E/S characteristics, but did <b>not make any sustainable investments</b>  |

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

This sub-fund promoted environmental and social characteristics related to climate, governance, and social norms as well as general ESG quality through the avoidance of

- (1) issuers exposed to excessive climate and transition risks,
- (2) companies with the worst DWS Norm Assessment (i.e., as regards compliance with international standards of corporate governance, human rights, and labor rights, customer and environmental safety, and business ethics),
- (3) companies with very severe unresolved controversies regarding the principles of the United Nations Global Compact (UN Global Compact),
- (4) issuers scored among the worst in terms of environmental, social, and governance risks compared to their peer group,
- (5) countries flagged as "not free" by Freedom House,
- (6) companies whose involvement in controversial sectors exceeds a predefined revenue threshold, and/or
- (7) companies involved in controversial weapons.

This sub-fund further promotes a minimum proportion of sustainable investments with a positive contribution to one or several of the United Nations Sustainable Development Goals (UN SDGs).

This sub-fund has not designated a reference benchmark for the purpose of attaining the environmental and/or social characteristics promoted.

The attainment of the promoted environmental and social characteristics as well as the sustainable investment was assessed via the application of an in-house DWS ESG assessment methodology as further described in section “What actions have been taken to meet the environmental and/or social characteristics during the reference period? ”. The methodology applied a variety of assessment approaches that were used as sustainability indicators to assess the attainment of the promoted environmental and social characteristics, which were as follows:

- **DWS Climate and Transition Risk Assessment** was used as indicator for an issuer’s exposure to climate and transition risks.

Performance: No investments in suboptimal assets

- **DWS Norm Assessment** was used as indicator for a company’s exposure to norm-related issues towards international standards.

Performance: No investments in suboptimal assets

- **UN Global Compact-Assessment** was used as indicator for whether a company is directly involved in one or more very severe, unresolved controversies related to the principles of the UN Global Compact.

Performance: No investments in suboptimal assets

- **DWS ESG Quality Assessment** was used as indicator for comparison of an issuer’s environmental, social and governance risks in relation to its peer group.

Performance: No investments in suboptimal assets

- **Freedom House Status** was used as indicator for the political-civil freedom of a country.

Performance: No investments in suboptimal assets

- **Exposure to controversial sectors** was used as indicator for a company’s involvement in controversial sectors.

Performance: 0%

- **DWS exclusions for controversial weapons** was used as indicator for a company’s involvement in controversial weapons.

Performance: 0%

- **DWS-Methodology for determining sustainable investments pursuant to Article 2(17) SFDR (DWS Sustainability Investment Assessment)** was used as indicator to measure the proportion of sustainable investments.

Performance: 22.83%

Please see the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?” for a description of the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted, including the exclusion criteria, and the assessment methodology for determining whether and to what extent assets met the defined environmental and/or social characteristics (including the turnover thresholds defined for the exclusions). This section contains further information on the sustainability indicators.

The values from the DWS front office system are used to calculate the sustainability indicators. This means that there may be minor deviations from the other market values that appear in the annual report, which are derived from the fund accounting system.

...and compared to previous periods?

Attainment of the promoted environmental and social characteristics at portfolio level was measured in the previous year on the basis of the following sustainability indicators:

## DWS Invest ESG Dynamic Opportunities

| Indicators                                  | Description | Performance      |
|---|-------------|------------------|
| <b>Sustainability indicators</b>            |             |                  |
| Climate and Transition Risk Assessment A    | -           | 99.7 % of assets |
| Climate and Transition Risk Assessment B    | -           | 0 % of assets    |

As of: December 30, 2022

The disclosure of the sustainability indicators has been revised compared with the prior-year report. The assessment methodology is unchanged. Additional information on the currently valid sustainability indicators is provided in the section entitled “What actions were taken to meet the environmental and/or social characteristics during the reference period?”

Information about taking into account the principal adverse impacts on sustainability factors is provided in the section entitled “How did this financial product consider principal adverse impacts on sustainability factors?”

**DWS ESG-Assessment Scale**

In the following assessment categories, the assets received one of six possible scores, with "A" being the best score and "F" being the worst score.

| Criteria | Involvement in controversial sectors *(1) | Involvement in controversial weapons | Norm Assessment *(6)                                | ESG Quality Assessment                     | SDG- Assessment                               | Climat & Transition Risk Assessment      |
|----------|---|--------------------------------------|---|--|---|--|
| <b>A</b> | Non-involvement                           | Confirmed non-involvement            | Confirmed no issues                                 | True leader in ESG (>= 87.5 DWS ESG score) | True SDG contributor (>= 87.5 SDG score)      | True climate leader (>= 87.5 score)      |
| <b>B</b> | Remote involvement                        | Alleged                              | Violations of lesser degree                         | ESG leader (75-87.5 DWS ESG score)         | SDG contributor (75-87.5 SDG score)           | Climate solution provider(75-87.5 score) |
| <b>C</b> | 0% - 5%                                   | Dual-Purpose *(2)                    | Violations of lesser degree                         | ESG upper midfield (50-75 DWS ESG score)   | SDG upper midfield (50-75 SDG score)          | Low transition risk (50-75 score)        |
| <b>D</b> | 5% - 10% (coal: 5% - 10%)                 | Owning *(3)/ Owned *(4)              | Violation of lesser degree                          | ESG lower midfield (25-50 DWS ESG score)   | SDG lower midfield (25-50 SDG score)          | Mod. transition risk (25-50 score)       |
| <b>E</b> | 10% - 25% (coal: 15% - 25%)               | Component Producer *(5)              | High severity or re-assessed highest violation *(7) | ESG laggard (12.5-25 DWS ESG score)        | SDG obstructer (12.5-25 SDG score)            | High transition risk (12.5-25 score)     |
| <b>F</b> | >= 25%                                    | Weapon producer                      | Highest severity / global compact violation *(8)    | True laggard in ESG (0-12.5 DWS ESG score) | Significant SDG obstructer (0-12.5 SDG score) | Excessive transition risk (0-12.5 score) |

\*(1) Revenue share thresholds as per standard scheme. Sub-Granularity available. Thresholds can be individually set.

\*(2) Encompasses e.g.. weapon-carrying systems such as combat aircraft that carry non-controversial weapons as well as controversial ones.

\*(3) Owning more than 20% equity.

\*(4) Being owned by more than 50% of company involved in grade E or F.

\*(5) Single purpose key component.

\*(6) Includes ILO controversies as well as corporate governance and product issues.

\*(7) In its ongoing assessment, DWS takes into account the violation(s) of international standards – observed via data from ESG data vendors – such as the UN Global Compact, but also possible ESG data vendor errors identified, future expected developments of these violations as well as the willingness of the issuer to engage in dialogue regarding corporate decisions in this regard.

\*(8) An F-grade can be considered a reconfirmed violation of the United Nations Global Compact rule framework for corporate behavior.

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The sub-fund partially invested in sustainable investments according to article 2(17) SFDR. Such sustainable investments contributed to at least one of the UN SDGs that related to environmental and/or social objectives, such as the following (non-exhaustive list):

- Goal 1: No poverty
- Goal 2: Zero hunger
- Goal 3: Good health and well-being
- Goal 4: Quality education
- Goal 5: Gender equality
- Goal 6: Clean water and sanitation
- Goal 7: Affordable and clean energy
- Goal 8: Decent work and economic growth
- Goal 10: Reduced inequalities
- Goal 11: Sustainable cities and communities
- Goal 12: Responsible consumption and production
- Goal 13: Climate action
- Goal 14: Life below water
- Goal 15: Life on land

The extent of the contribution to individual UN SDGs varied depending on the actual investments in the portfolio.

DWS determined the contribution to the UN SDGs based on its DWS Sustainability Investment Assessment, in which various criteria were used to assess the potential assets with regard to whether an investment could be considered as sustainable. As part of this assessment methodology, it was determined whether (1) an investment made a positive contribution to one or more UN SDGs, (2) the issuer passed the Do Not Significantly Harm (“DNSH”) assessment and (3) the company followed good governance practices.

The DWS Sustainability Investment Assessment used data from several data providers, public sources and/or internal assessments based on a defined assessment and classification methodology to determine whether an investment is sustainable. Investments that make a positive contribution to the UN SDGs were assessed based on revenues, capital expenditure (CapEx) and/or operational expenditure (OpEx), depending on the asset. Where a positive contribution was determined, the investment was deemed sustainable if the issuer passed the DNSH assessment and the company followed good governance practices.

The share of sustainable investments as defined in article 2(17) SFDR in the portfolio was calculated in proportion to the economic activities of the issuers that qualified as sustainable. Notwithstanding the preceding, in the case of use-of-proceeds bonds that qualified as sustainable investment, the value of the entire bond was counted towards the share of sustainable investments.

The sub-fund did currently not commit to target a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The DNSH assessment was an integral part of the DWS Sustainability Investment Assessment and evaluated whether an issuer with a contribution to a UN SDG caused significant harm to any of these objectives. In case that a significant harm was identified, the issuer failed the DNSH assessment and the investment could not be considered sustainable.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the DNSH assessment under article 2(17) SFDR, the DWS Sustainability Investment Assessment systematically integrated the mandatory principal adverse indicators on sustainability factors (dependent on relevance) from Table 1 and relevant indicators from Tables 2 and 3 of Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation (SFDR). Taking into account these adverse impacts, DWS had established quantitative thresholds and/or qualitative values to determine if an issuer significantly harmed any of the environmental or social objectives. These values were set based upon various external and internal factors, such as data availability or market developments and could be adapted going forward.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As part of its sustainability investment assessment, DWS further evaluated through its DWS Norm Assessment the alignment of a company with international norms. This included checks in relation to adherence to international norms, for example, the OECD Guidelines for Multinational Enterprises, the UN Guiding Principles on Business and Human Rights, the principles of the UN Global Compact and the standards of the International Labour Organization. Companies with the worst DWS Norm Assessment score (i.e., a letter score of "F") could not be considered sustainable and were excluded as an investment.

*The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union Criteria.*

*The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union Criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union Criteria for environmentally sustainable economic activities.*

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## How did this financial product consider principal adverse impacts on sustainability factors?

The sub-fund considered the following principal adverse impacts on sustainability factors from Annex I of the Commission Delegated Regulation (EU) 2022/1288 supplementing the Sustainable Finance Disclosure Regulation:

- Greenhouse gas (GHG) emissions (no. 1);
- Carbon footprint (no. 2);
- GHG intensity of investee companies (no. 3);
- Exposure to companies active in the fossil fuel sector (no. 4);
- Violations of UN Global Compact principles and OECD Guidelines for multinational enterprises (no. 10); and
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) (no. 14).

For sustainable investments, the principal adverse impacts were also considered in the DNSH assessment as described in section "How have the indicators for adverse impacts on sustainability factors been taken into account?".

## DWS Invest ESG Dynamic Opportunities

| Indicators   | Description   | Performance                |
|--|---|----------------------------|
| <b>Principal Adverse Impact</b>  |   |                            |
| PAII - 01. GHG emissions   | Sum of the current value of investments of company i, divided by the investee company's enterprise value and multiplied by company's scope 1+2+3 GHG emissions.                               | 21940.18 tCO2e             |
| PAII - 02. Carbon Footprint - EUR  | The carbon footprint is expressed as tonnes of CO2 emissions per million EUR invested. The CO2 emissions of an issuer are normalised by its enterprise value including cash (EVIC)            | 233.78 tCO2e / million EUR |
| PAII - 03. Carbon Intensity  | Weighted average carbon intensity scope 1+2+3   | 556.6 tCO2e / million EUR  |
| PAII - 04. Exposure to companies active in the fossil fuel sector                          | Share of investments in companies active in the fossil fuel sector  | 15.75 % of assets          |
| PAII - 10. Violations of UNGC principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises                                      | 0 % of assets              |
| PAII - 14. Exposure to controversial weapons   | Share of investments in investee companies involved in the manufacture or selling of controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | 0 % of assets              |

As of: December 29, 2023

The Principal Adverse Impact Indicators (PAIIs) are calculated on the basis of the data in the DWS back office and front office systems, which are primarily based on the data of external ESG data providers. If there is no data on individual PAIIs for individual securities or their issuers, either because no data is available or the PAII is not applicable to the particular issuer or security, these securities or issuers are not included in the calculation of the PAII. With target fund investments, a look-through of the target fund holdings is performed if appropriate data is available. The calculation method for the individual PAI indicators may change in subsequent reporting periods due to evolving market standards, a change in the treatment of securities of certain types of instruments (such as derivatives) or as a result of regulatory clarifications.

Moreover, improved data availability may have an effect on the reported PAIIs in subsequent reporting periods.

for the period from January 01, 2023, through December 29, 2023

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: for the period from January 01, 2023, through December 31, 2023

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments as of the reporting date was 83.89% of portfolio assets.

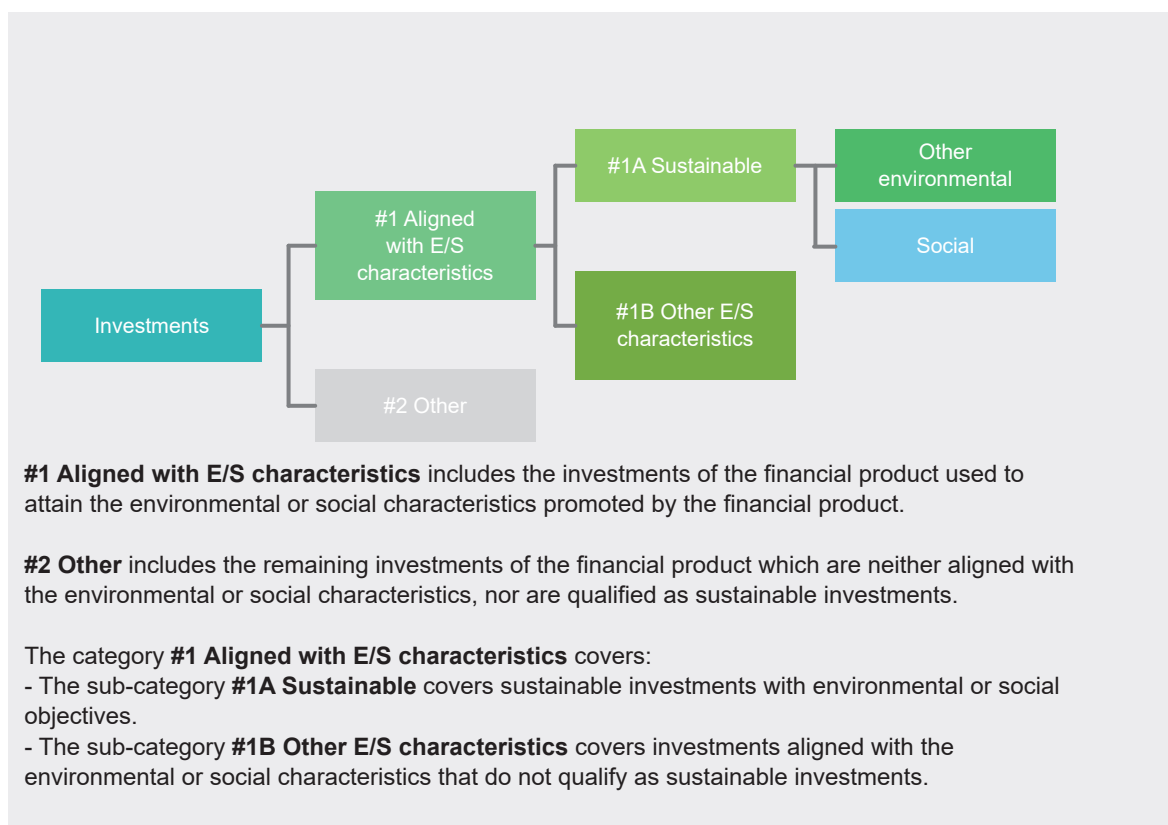

Proportion of sustainability-related investments for the previous year: 99.7%

**Asset allocation** describes the share of investments in specific assets.

### What was the asset allocation?

This sub-fund invested 83.89% of its net assets in investments that were aligned with the promoted environmental and social characteristics (#1 Aligned with E/S Characteristics). Within this category, 22.83% of the net assets of the sub-fund qualify as sustainable investments (#1A Sustainable). The minimum proportion of sustainable investments with environmental objectives that do not comply with the EU taxonomy was 7.84% and the proportion of socially sustainable investments was 14.99%. The actual share of sustainable investments with an environmental target that did not comply with the EU taxonomy and socially sustainable investments depended on the market situation and the investable investment universe.

16.11% of the net assets of the #####FundType## were invested in all eligible assets for which either the DWS ESG assessment methodology was not applied or whose ESG data coverage was incomplete (#2 Other). Within this share, investments of up to 20% of the net assets of the #####FundType## were tolerated in assets for which there was incomplete data coverage in terms of the ESG valuation approaches and exclusions described above. This tolerance did not apply to the assessment of good governance practices (using the DWS standards assessment).

### In which economic sectors were the investments made?

#### DWS Invest ESG Dynamic Opportunities

| <b>Exposure to companies active in the fossil fuel sector</b> |   | <b>15.8 %</b>            |

As of: December 29, 2023

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Due to a lack of reliable data the sub-fund did not commit to invest a minimum proportion of sustainable investments with an environmental objective aligned with the EU Taxonomy. Therefore, the promoted minimum percentage of environmentally sustainable investments aligned with the EU Taxonomy was 0% of the sub-fund's net assets. However, it may occur that part of the investments' underlying economic activities were aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

Yes:

In fossil gas

In nuclear energy

No

The sub-fund did not take into account the taxonomy-conformity of investments in the fossil gas and/or nuclear energy sectors. Nevertheless, it might have occurred that as part of the investment strategy the sub-fund also invested in issuers that were also active in these areas.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities**

Directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities**
