- 1862 / Note on master-feeder structures

# General information

**The funds described in this report are sub-funds of a SICAV (Société d'Investissement à Capital Variable) incorporated under Luxembourg law.**

## Performance

The investment return, or performance, of a mutual fund investment is measured by the change in value of the fund's shares. The net asset values per share (= redemption prices) with the addition of intervening distribution, are used as the basis for calculating the value. Past performance is not a guide to future results.

The corresponding benchmark – if available – is also presented in the report. All financial data in this publication is **as of December 31, 2023**, (unless otherwise stated).

## Sales prospectuses

Fund shares are purchased on the basis of the current sales prospectus, the key investor information document and the articles of incorporation and by-laws of the SICAV, in combination with the latest audited annual report and any semiannual report that is more recent than the latest annual report.

## Issue and redemption prices

The current issue and redemption prices and all other information for shareholders may be requested at any time at the registered office of the Management Company and from the paying agents. In addition, the issue and redemption prices are published in every country of distribution through appropriate media (such as the Internet, electronic information systems, newspapers, etc.).

## Renaming of sub-funds

---

The sub-fund [DWS Invest CROCI World](#) was renamed [DWS Invest CROCI World Value](#) effective November 21, 2023.

## Mergers of SICAV-external funds with sub-funds of the SICAV

---

Following a resolution to that effect adopted by each respective Board of Directors and the approval of the Luxembourg supervisory authority CSSF, the sub-fund [DWS Invest II Euro Bonds Conservative](#) of DWS Invest II, SICAV was merged into the sub-fund [DWS Invest ESG Floating Rate Notes](#) of DWS Invest, SICAV with effect from December 12, 2023:

| Merged sub-fund |              | Receiving sub-fund |              |                  |

The share class **TFD** for the sub-fund **DWS Invest Short Duration Credit** was closed effective September 6, 2023, by resolution of the Management Board of DWS Investment S.A. authorized by the Board of Directors.

## Obligations for cross-border distribution

---

The annual financial statements for this SICAV (Société d'Investissement à Capital Variable) contain a report by the réviseur d'entreprises agréé (independent auditor's opinion). This report refers exclusively to the German-language version of the annual financial statements as prepared for the purposes of complying with the requirements imposed by the supervisory authority of the country of origin of the SICAV ("original version"). For cross-border distribution, one of the obligations of the SICAV is to also publish annual reports in at least one of the national languages of the relevant country of distribution or in another language authorized by the competent authorities in the relevant country of distribution; where applicable, extracts may be published on a sub-fund basis. The tax information contained in the annual reports for investors who are subject, without limitation, to taxation in the Federal Republic of Germany and specific information for investors in a different country of distribution have been omitted in the national or specific language versions. National or language versions must also be published for the semiannual reports to be produced for the first half of the fiscal year. In the event of any discrepancies in content between the German original version of the report and any translation thereof, the German-language version shall prevail.

## Notes on master-feeder structures

---

The sub-fund [DWS Invest ESG Dynamic Opportunities](#) was a Directive-compliant feeder fund (the "feeder fund") of the UCITS master fund [DWS ESG Dynamic Opportunities](#) (the "master fund", not approved for sale to non-qualified investors in Switzerland) until November 21, 2023 (date of dissolution of the master-feeder structure).

The management company of the master fund is DWS Investment GmbH, Mainzer Landstraße 11-17, 60329 Frankfurt/Main, Germany, which is also where the master fund's report and further information (sales prospectus, annual report, etc.) can be obtained.

## Material events after the reporting date

---

The sub-fund [DWS Invest Emerging Markets IG Sovereign Debt](#) was put into liquidation effective January 10, 2024, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective January 9, 2024. Investors could redeem sub-fund shares until January 9, 2024.

The cover page features a white central area with a decorative border of fine, parallel lines. The lines are arranged in a pattern that creates a sense of depth and movement, with some lines curving around the corners. The text is centered in a bold, black, sans-serif font.

## DWS Invest Africa

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Africa focuses on the African continent. The management primarily invests in equities of issuers that have their registered offices in Africa or conduct their principal business activity in Africa, or which, as holding companies, predominantly hold interests in companies registered in Africa, especially in South Africa, Egypt, Mauritius, Nigeria, Morocco and Kenya. Preference is given to companies with strong earnings that have good market positions and solid balance sheets. When selecting individual stocks, the longer-term focus is on themes including abundance of natural resources, infrastructure spending and growth in consumer spending.

In the twelve months through the end of December 2023, the sub-fund DWS Invest Africa was unable to keep its value entirely stable (-0.1% per share; LC share class; BVI method; in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 31, 2023

an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

The economic situation in Egypt was dominated by high inflation and a strictly controlled currency. Companies that either generated high sales figures in a foreign cur-

rency or benefited from the devaluation of the Egyptian pound or from the high local interest rates were able to record significant price gains. This included various banks, such as Credit Agricole Egypt, as well as the textile product manufacturer Oriental Weavers and the hotel operator Orascom Development Egypt.

In South Africa, the economic situation continued to be strained. Only the largest pharmaceuticals manufacturer domiciled on the African continent, Aspen Pharmacare, recorded a noticeable rise in price. Other companies, such as the telecommunications concern MTN Group, suffered from a further devaluation of the Nigerian naira and a difficult business environment in South Africa. Clothing companies, such as Mr Price, also came under pressure due to ongoing sluggish demand and problems with the power supply. Other African countries, e.g., Nigeria and Kenya, continued to face currency problems. This was also reflected in investments in Kenyan equities, which had a significant adverse effect on the performance of the

sub-fund, despite only making up a small proportion of the portfolio.

In contrast, exposure to Africa's largest payment services provider, Network International, which benefited from takeover speculation, boosted earnings significantly.

### **Information on the environmental and/or social characteristics**

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI EFM AFRICA EUR Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 64.950 |
| Highest market risk exposure ..... | % | 90.003 |
| Average market risk exposure ..... | % | 72.301 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

| <b>V. Net gain/loss for the fiscal year</b> .....                               | <b>EUR</b> | <b>-2 136 406.40</b> |               |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                            |                         |
|----------------------------|-------------------------|
| Class FC 1.03% p.a.,       | Class LC 2.06% p.a.,    |
| Class LD 2.06% p.a.,       | Class NC 2.78% p.a.,    |
| Class GBP D RD 1.09% p.a., | Class USD LC 2.12% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 39 519.83.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Artificial Intelligence

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve long-term capital appreciation. To this end, the sub-fund invests predominantly in companies in the international equity markets whose business benefits from or is currently connected to the development of artificial intelligence (AI). In addition, equities of all market capitalizations, share certificates, participation and dividend-right certificates, convertible bonds and equity warrants issued by foreign and domestic companies can be added to the sub-fund. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

In the reporting period from January 1, 2023, through the end of December 2023, the sub-fund DWS Invest Artificial Intelligence recorded an appreciation of 42.9% per share (LD share class; BVI method; in euro).

### Investment policy in the reporting period

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains,

\*"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

These developments also had a significant effect within the sub-fund. New achievements in the field of artificial intelligence, especially in the area of large language models (LLMs), resulted in a strong performance on the

part of technology stocks in the sub-fund. Its positioning in major American technology companies in particular made a positive contribution to the performance. New and increasingly complex AI models require, above all, a great deal of computing power to train and use the models. This resulted in increased demand for chips developed especially for computationally intensive AI applications. This was reflected mainly in the positive development of semiconductor stocks in the sub-fund; they made the greatest contribution to the performance during the reporting period, closely followed by software companies.

The information technology sector recorded above-average performance in the reporting period and was the best sector in the

portfolio. The positioning in the communications services sector as well as in the cyclical consumer goods area also made a significant contribution to the sub-fund's positive performance. The communications services and cyclical consumer goods sectors were amongst the best sectors, behind the information technology sector. Companies from the health care and the financial services sectors that were also involved in the field of AI developed positively in the reporting period overall, but these were some of the weakest sectors.

At country level, the sub-fund benefited noticeably from its positioning in the United States, as well as from its positioning in Taiwan and the Netherlands where semiconductor stocks are mainly located. China, which is striving to become a global leader in the field of artificial intelligence, did not meet expectations despite stimulatory measures and had a negative effect on the sub-fund's performance. The performance was mixed on the whole in the Asian markets. For example, the sub-fund benefited from its positioning in Taiwan, Korea and Japan, whereas China and Singapore had a negative impact. During the reporting period, the sub-fund management mainly selectively reduced stocks that had already recorded a strong price increase but it largely remained loyal to its sector and country allocation.

The top-performing individual stocks in the reporting period included the "Magnificent 7", i.e., the major technology companies from the United States. Nvidia, Alphabet and Microsoft in particu-

lar, as well as Meta Platforms and Amazon, were thus among the equities with the largest positive contributions to performance. In addition, equities such as Arista Networks, a networking equipment company for cloud environments, also benefited from the demand for faster AI semiconductors and the associated expansion of cloud environments, as well as Alchip Technologies, a globally leading provider of computationally intensive semiconductor services from Taiwan, that also benefited from the increased demand for AI semiconductors.

In China, NetEase and Tencent Music Entertainment were some of the best performing equities. NetEase benefited from market share gains, whereas Tencent Music boasted increased user numbers and a positive outlook with respect to rising operative margins. In contrast, the positions in Meituan and JD.com recorded below average performance; they were also amongst the lowest performing equities in the reporting period overall. Meituan and JD.com suffered primarily from the weaker Chinese consumer sector and the increased competition in their respective areas.

The portfolio management disposed of its investments in Xpeng, Zoom Video Communications and JD.com, for example. The main reason for the decision was the increased competitive pressure faced by all three equities. In the reporting period, the U.S. company Double Verify was included in the portfolio for the first time. The company helps advertisers to improve the effectiveness of their

online advertising and to ensure that the online adverts reach the target audience; it also helps these companies to detect fraud. It supports advertisers in protecting their brand reputation across various devices and new channels. The company Pinduoduo from China was also new to the portfolio. In just a few years, Pinduoduo has developed into China's second largest e-commerce platform measured by the customers active in a year as well as the second largest platform by gross volume of goods. The company has continually increased its share of the domestic e-commerce market and has attained a figure of more than 100 million active users per month globally.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

### Composition of the reference portfolio (according to CSSF circular 11/512)

50% MSCI World Information Tech Index Net Return in EUR, 35% MSCI All Country World Index, in EUR, 15% MSCI China 50 Capped Index in EUR

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 94.201  |
| Highest market risk exposure ..... | % | 129.495 |
| Average market risk exposure ..... | % | 111.686 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

## DWS Invest Artificial Intelligence

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                            |
|--------------------------|----------------------------|
| Class FC 0.86% p.a.,     | Class LC 1.62% p.a.,       |
| Class LD 1.61% p.a.,     | Class MFC 0.47% p.a.,      |
| Class NC 2.12% p.a.,     | Class PFC 2.59% p.a.,      |
| Class TFC 0.87% p.a.,    | Class TFCH (P) 0.88% p.a., |
| Class XC 0.45% p.a.,     | Class USD FC 0.86% p.a.,   |
| Class USD IC 0.65% p.a., | Class USD LC 1.61% p.a.    |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 166 669.12.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest Asian Bonds

### Investment objective and performance in the reporting period

The sub-fund seeks to generate capital appreciation that exceeds the benchmark (the J.P. Morgan Asian Credit Index). To achieve this, it invests in interest-bearing securities issued by governments of Asian-Pacific countries, Asian-Pacific government authorities, municipal administrations in Asian-Pacific countries, companies having their registered offices in an Asian-Pacific country, supra-national institutions (securities issued in Asian-Pacific currencies) and non-Asian-Pacific companies (securities issued in Asian-Pacific currencies). The interest-bearing securities may be denominated in U.S. dollars, other currencies of G-7 countries or in an Asian currency.

The sub-fund DWS Invest Asian Bonds recorded an appreciation of 3.2% per share (USD FC share class; BVI method) in the last twelve months through the end of December 2023 but underperformed its benchmark, which returned +7.0% (both percentages in U.S. dollar terms).

### Investment policy in the reporting period

The bond sub-fund DWS Invest Asian Bonds concentrated its investments on corporate bonds and retained a barbell approach with an allocation in high-quality investment-grade (IG) bonds and U.S. Treasuries, balanced by high-yield (HY) bonds selected according to the bottom-up principle. Regionally, it was broadly positioned in general. As of the reporting date, the portfolio had

an average credit rating of “investment grade.”

The sub-fund concentrated its investments on short-term bonds and floating rate bonds (both IG and HY) to minimize the maturity risk in view of rising yields on U.S. government bonds. The investments were broadly diversified in terms of geographical exposure in Asia, including India, Indonesia, Japan, South Korea, and Australia.

In addition, the exposure to the Macau gambling sector was increased based on what the portfolio management believes to be an improved outlook and a recovery in Macau’s gambling industry. The short-term HY exposure in India and Indonesia delivered perceptible return contributions for the portfolio. Many of these issuers had access to cheaper onshore financing to refinance the term of their USD bonds.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

Sentiment in the Asian credit markets improved compared with 2022 as investors distanced themselves from the Chinese

As of: December 31, 2023

property bust within the high-yield segment, diversifying their investments into other parts of Asia. Asian investors wishing to broaden their positioning also focused on Australia and Japan.

The sub-fund's investments in high-yield bonds from the Indonesian real estate sector as well as in the metal and mining industry and in India's renewable energy sector contributed substantially to the appreciation of the DWS Invest Asian Bonds sub-fund. Exposures in investment-grade bonds issued by Japanese financial institutions and insurers and by South Korean issuers also boosted earnings.

Due to the shorter maturity of its bond portfolio, the sub-fund DWS Invest Asian Bonds did not

match its benchmark. The rally in US government bonds in late 2023 was another contributory factor in the sub-fund's underperformance. In addition, the limited exposure in high-yield bonds from China's real estate sector negatively impacted on the sub-fund's performance, with defaults continuing in this segment.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7

of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

## DWS Invest Asian Bonds

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Citigroup Global Markets Europe AG, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH, Toronto Dominion Bank and UBS AG.

### Exchange rates (indirect quotes)

| Singapore dollar      | SGD | 1.319800 | = | USD | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Does not include positions with a negative balance, if such exist.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>3</sup> Annualization has not been performed for share classes launched during the year.

<sup>4</sup> Annualization has not been performed for share classes liquidated during the year

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 3.25% of all transactions. The total volume was USD 176 628 296.60.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Asian Small/Mid Cap (in liquidation)

### Investment objective and performance in the reporting period

The investment focus of DWS Invest Asian Small/Mid Cap (in liquidation) was on equities of small and medium-sized issuers having their registered office in an Asian country or that conduct their principal business activity in Asia or which, as holding companies, hold primarily interests in companies registered in Asia. Aspects considered when selecting investments included financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

The sub-fund recorded a decline of 5.6% per share (LC share class; BVI method) in the reporting period from January 1, 2023, through November 29, 2023 (date of last share price calculation). Its benchmark rose 13.9% in the same period (both percentages in euro terms).

### Investment policy in the reporting period

Ten-year U.S. Treasury yields rose from roughly 3.9% at the end of 2022 to roughly 4.9% in October 2023. The market priced in an extended period of higher interest rates in the United States and in Europe. Even amid high interest rates and the global economic downturn, the price of Brent crude oil climbed from roughly 86 U.S. dollars at the end of 2022 to roughly 87 U.S. dollars in October 2023. Although it did not intervene with massive fiscal stimulus, the Chinese government did ease liquidity in the banking system and relax restrictions on home purchases in most of China's regions.

<sup>4</sup> in USD

\*"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: November 29, 2023 (liquidation date)

The Chinese state reduced both the key one-year lending rate and the minimum deposit rate for major banks. But the downward trend in the real estate sector persisted; revenues declined continuously after an early increase at the beginning of 2023. Various real estate developers fell in arrears on their loan repayments. The trend in China's consumer price index slowed from +1.8% at the end of 2022 to -0.2% in October 2023, indicating weak consumer spending and deflation risk. Relations between the U.S. and China remained uneven in the reporting period. Although the two governments resumed talks on important issues, the United States restricted technology exports to China, particularly those for artificial intelligence applications.

The relative performance of the sub-fund was curbed by globally

high interest rates worldwide and by the absence of a recovery in the Chinese economy even after the end of the Covid lockdowns. Rising borrowing costs in China, Hong Kong and Singapore had a negative impact on the real estate sector. This affected especially the shares of Shenzhen Investment, Hysan Development and Lendlease Global Commercial REIT. The share price of DFI Retail Group within the consumer goods sector suffered from the slow economic recovery in Hong Kong, which saw fewer tourist visits from mainland China.

Reflecting the higher net interest margins in a high-interest environment, the sub-fund was overweight in financials. Also overweight was the IT sector, where the sub-fund positioned itself with long-term investments in electric vehicles, automation and AI.

Underweights existed in the basic materials sector, due to the weak Chinese economy, as well as in communication services. Excessive valuations have made investments in this sector less attractive in a high-interest environment.

One of the best-performing investments was Chroma ATE, a Taiwanese manufacturer of test systems, which benefited from stronger demand for its battery and semiconductor test products. Another positive contribution to performance came from Power Finance Corporation. This Indian credit institution specializing in the utility sector benefited from the country's power supply bottlenecks, which have enhanced the company's business potential. The sub-fund realized a gain on its position in IMAX China. The Chinese movie theater operator saw a recovery in theater visits beginning in early 2023 and received an offer to take it private. The portfolio management sold off the position once it had reached what was considered a fair valuation.

At the other end, the weakest performers included Kangwon Land, Hysan Development and Guangdong Investment. Kangwon Land in Korea suffered from high interest rates and a weak domestic economy, both of which had a negative impact on valuation. Hysan Development in Hong Kong was adversely affected by higher borrowing costs and a sluggish economy in both Hong Kong and mainland China. Guangdong Investment in China came under pressure from its exposure to the Chinese real estate market.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI AC Asia ex Japan Small Cap Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 0.000  |
| Highest market risk exposure ..... | % | 98.605 |
| Average market risk exposure ..... | % | 86.210 |

The values-at-risk were calculated for the period from January 1, 2023, through November 29, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

|-----------------------------|-----|---------------|---|-----|---|
| Indonesian rupiah . . . . . | IDR | 17 044.485920 | = | EUR | 1 |
| Indian rupee . . . . .      | INR | 92.117659     | = | EUR | 1 |

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective November 29, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                   |                                   |
|-----------------------------------|-----------------------------------|
| Class FC 0.40% <sup>1</sup> ,     | Class LC 0.30% <sup>1</sup> ,     |
| Class LD 0.24% <sup>1</sup> ,     | Class LS 0.30% <sup>1</sup> ,     |
| Class NC 0.24% <sup>1</sup> ,     | Class TFC 0.69% <sup>1</sup> ,    |
| Class TFD 0.69% <sup>1</sup> ,    | Class USD FC 1.29% <sup>1</sup> , |
| Class USD LC 0.97% <sup>1</sup> , | Class USD TFC 0.54% <sup>1</sup>  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 80 041.38.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

|  |            |                |
|--|------------|----------------|
| <b>I. Value of the fund's net assets at the beginning of the shortened fiscal year</b> |            |                |
| 1. Distribution for the previous year  | EUR        | -76 294.97     |

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value..

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Brazilian Equities

### Investment objective and performance in the reporting period

DWS Invest Brazilian Equities focuses its investments on companies that have their registered offices in Brazil or conduct their business activities predominantly in Brazil. In the reporting period from January 1 through the end of December 2023, the sub-fund recorded an appreciation of 23.1% per share (LC share class; BVI method). Its benchmark, the MSCI Brazil 10/40, rose 27.5% in the same period (both percentages in euro terms).

### Investment policy in the reporting period

Brazilian equities were one of the global standouts in 2023. They broadly followed the Latin American trend and significantly surpassed the majority of emerging markets. Against this backdrop, the sub-fund was also able to post a significant gain in the reporting period. The Brazilian equity market reached a new all-time high shortly before the turn of the year, boosted by falling interest rates and an upgraded sovereign rating by S&P. In its rationale for the rating action, the agency stated that the fundamental tax reform would make an important contribution to longer-term productivity gains. Brazil's strong performance was underpinned by a broad reduction in political risk, solidity of the institutional framework, sharply decelerating inflation, GDP growth upgrades, favorable investor positioning, historically attractive valuations, and the Brazilian Central Bank (BCB) cutting the Selic interest rate from 13.75% to 11.75% between August and December.

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

Despite being confronted by aggressive populist rhetoric from re-elected President Lula da Silva at the beginning of the year, which included calls for easing steps, BCB president Campos Neto and finance minister Haddad remained undeterred and stuck to their convictions. The BCB reaffirmed its independence and kept its key interest rate high through August, while Haddad pushed through parliament a much-needed, long-promised fiscal framework to reset inflation expectations. GDP growth kept being revised higher throughout 2023, driven by a positive supply shock in agriculture, lowest unemployment since 2015, Brazilian real currency stability, and inflation decelerating to 4.62%, finally within BCB's target band. After decades of trying, Brazil's Congress finally adopted the first phase of tax reform in December. So far, the government has stuck to its stated goal of a zero budget deficit and is not inter-

fering with this new budget policy anchor.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation

(EU) 2019/2088 on sustainability-related disclosures in the financial services sector was provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
100% MSCI Brazil 10-40

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 90.066  |
| Highest market risk exposure | % | 114.971 |
| Average market risk exposure | % | 104.723 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 5 739.90 as of the reporting date.

### Exchange rates (indirect quotes)

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                          |
|--------------------------|--------------------------|
| Class FC 1.03% p.a.,     | Class FC50 0.40% p.a.,   |
| Class IC 0.58% p.a.,     | Class LC 1.93% p.a.,     |
| Class NC 2.59% p.a.,     | Class TFC 1.03% p.a.,    |
| Class USD IC 0.58% p.a., | Class USD LC 1.93% p.a., |
| Class USD TFC 0.91% p.a. |                          |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for the fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 236 966.92.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest China Bonds

### Investment objective and performance in the reporting period

The sub-fund seeks to generate sustained capital appreciation. To achieve this, at least 60% of the sub-fund's net assets must be invested in securities of issuers that have their registered office or principal business activity in the Greater China region. The sub-fund may invest its assets in interest-bearing debt securities issued by the Chinese government, Chinese state agencies, Chinese local authorities or companies having their registered office or principal business activity in China. The sub-fund's assets are generally hedged against the U.S. dollar and invested in interest-bearing securities that are denominated in the U.S. dollar or hedged against the U.S. dollar, as well as in cash deposits in U.S. dollars. Renminbi-denominated assets may be invested via the Chinese offshore as well as the Chinese onshore market.

In the twelve months through the end of December 2023, the sub-fund DWS Invest China Bonds recorded an appreciation of 0.4% per share (USD LC share class; BVI method; in U.S. dollars).

### Investment policy in the reporting period

The bond sub-fund DWS Invest China Bonds concentrated its investments on corporate bonds. In terms of region, the investment focus was on the area around China. As of the reporting date, most of the portfolio had a credit rating of "investment-grade."

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

The sub-fund concentrated its investments on short-term bonds to minimize the maturity risk in view of rising yields on U.S. government bonds. In addition, the exposure to the Macau gambling sector was increased based on what the portfolio management believes to be an improved out-

look and a recovery in Macau's gambling industry. The sub-fund also invested in several Indian and Indonesian high-yield bonds which resulted in significant interest income for the portfolio. Many of these issuers had access to cheaper onshore financing to refinance the term of their USD bonds.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

Sentiment in the Chinese credit market remained dampened as hopes of a dramatic recovery post-Covid failed to materialize.

The country's weak economic growth and the problems in its real estate sector continued to be a key issue. Thanks to its rather defensive portfolio orientation, the sub-fund DWS Invest China Bonds performed very well in this difficult investment environment. Its exposure to bonds outside of China resulted in significant interest income for the portfolio. Also, its exposure to the Macau gambling sector made a noticeable contribution to the performance of the portfolio as Macau's gross gambling revenue recovered further to pre-Covid levels. However, its duration reduced the performance of the sub-fund as the yields of the U.S. government bonds dropped significantly toward the end of 2023.

The sub-fund's investments in short-term bonds with high credit ratings from issuers from Hong Kong made a major contribution to the appreciation of the sub-fund DWS Invest China Bonds due to their reasonable coupon revenue. The exposure to Japanese financials (bank and insurance company bonds) and Indian high-yield bonds also made a positive contribution to performance.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

### Composition of the reference portfolio (according to CSSF circular 11/512)

14.14% of portfolio value

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 0.556 |
| Highest market risk exposure | % | 1.532 |
| Average market risk exposure | % | 0.995 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.5, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

<sup>1</sup>This includes primarily income from the release of excess accruals in the amount of USD 6 000.52.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                           |
|--------------------------------|---------------------------|
| Class CHF FCH 0.76% p.a.,      | Class CHF LCH 1.34% p.a., |
| Class RMB FC 0.74% p.a.,       | Class RMB LC 1.31% p.a.,  |
| Class RMB FCH 0.77% p.a.,      | Class RMB LCH 1.34% p.a., |
| Class FCH 0.76% p.a.,          | Class FDH 0.78% p.a.,     |
| Class LCH 1.34% p.a.,          | Class LDH 1.34% p.a.,     |
| Class NC 1.74% p.a.,           | Class NCH 1.78% p.a.,     |
| Class NDH 1.77% p.a.,          | Class NDQH 1.77% p.a.,    |
| Class PFCH 0.27% p.a.,         | Class PFDQH 0.66% p.a.,   |
| Class TFCH 0.77% p.a.,         | Class SEK FCH 0.78% p.a., |
| Class SEK LCH 1.32% p.a.,      | Class USD FC 0.74% p.a.,  |
| Class USD FCH (P) 0.77% p.a.,  | Class USD LC 1.31% p.a.,  |
| Class USD LDMH (P) 1.34% p.a., | Class USD TFC 0.75% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |     |                |                       |
|--|-----|----------------|-----------------------|

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.09% of all transactions. The total volume was USD 10 112 079.88.

## DWS Invest China Bonds

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Chinese Equities

### Investment objective and performance in the reporting period

The objectives of the investment policy of the sub-fund DWS Invest Chinese Equities are to participate in the opportunities of the emerging market China (including Hong Kong) and to achieve sustained capital appreciation, outperforming the benchmark for the sub-fund (MSCI China 10/40 (EUR)). Most of the securities of the sub-fund are expected to be an integral part of the benchmark. In order to take advantage of special investment opportunities at its own discretion, the sub-fund management will not invest in the securities and sectors contained in the benchmark.

DWS Invest Chinese Equities lost 21.8% per share (LC share class; BVI method), while the MSCI China 10/40 index was down 13.8% in the 2023 fiscal year (both percentages in euro terms).

### Investment policy in the reporting period

2023 was another challenging year for the Hong Kong and China market. The reopening of the local economy post-Covid did not bring a strong economic recovery, with weak inflation and slowing retail sales growth, while the Manufacturing PMI stayed below the 50-mark for most of the time in 2023. Physical property price/volume/investment continued the YoY decline and has yet to find a bottom, hence more property developers faced liquidity difficulties. Externally, geopolitical risks lingered, with the United States imposing more Executive Orders and sanctions on China. As a

As of: December 31, 2023

result, Chinese equities (as measured by the MSCI China 10/40 index) experienced double-digit losses for the third consecutive year.

The sub-fund underperformed the benchmark in 2023, mainly dragged by the sub-fund's stock selection in the consumer discretionary, financial and communication services sectors. On the other hand, underweight in the basic materials sector and stock selection in the utilities sector contributed positively. In view of the volatile market environment, the sub-fund's stock selection continued to focus on quality growth companies trading at a reasonable valuation.

The sub-fund's key overweights included the consumer discretionary and consumer staples sectors. Amid the volatile economy resulting from COVID-19 and the on-going tensions between the U.S. and China, portfolio management believed the domestic con-

sumption of both the discretionary items and staple items would be relatively resilient, and would continue to benefit from the Chinese government's goal of promoting "Common Prosperity". But unfortunately, the falling property prices and the muted inflation both led to a much weaker consumption desire in China. Hence, the sub-fund's overweights in these two sectors turned out to be a negative contributor for the performance last year.

The sub-fund's key underweights included the financials, basic materials and healthcare sectors. In the financials sector, portfolio management was concerned about the deteriorating asset quality of the banking and insurance sectors in China. In the basic materials sector, the underweight was on concern of poor property sales in China which would have led to a weaker demand on most of the construction materials. In the healthcare sector, the underweight was on concern of

deteriorating geo-political relationships between the US and China, which would bring more Executive Orders or sanctions in this sector, especially in the innovative pharmaceuticals segment.

Looking at individual stocks, top contributing stocks included the overweight in Petrochina, PDD, and Naura Technology. On the other hand, the worst-performing stocks were Meituan and Longfor.

### **Information on the environmental and/or social characteristics**

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

## DWS Invest Chinese Equities

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI EM China 10/40 NET EUR Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 93.964  |
| Highest market risk exposure | % | 110.650 |
| Average market risk exposure | % | 102.587 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

| Hong Kong dollar      | HKD | 8.650489 | = | EUR | 1 |
| U.S. dollar           | USD | 1.107000 | = | EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                            |                          |
|----------------------------|--------------------------|
| Class FC 0.91% p.a.,       | Class LC 1.73% p.a.,     |
| Class NC 2.43% p.a.,       | Class TFC 0.91% p.a.,    |
| Class GBP D RD 1.02% p.a., | Class USD FC 1.02% p.a., |
| Class USD LC 1.92% p.a.,   | Class USD TFC 0.96% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 291 228.65.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

# Annual report

## DWS Invest Conservative Opportunities

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Conservative Opportunities is a multi-asset fund with integrated risk management. The fund of fund invests at least 25% of the sub-fund's net assets in target funds. Investments for the sub-fund may include units of foreign and domestic equity funds, multi-asset funds, bond funds and near money market funds. The sub-fund's assets can additionally be invested in equities, interest-bearing securities, share certificates and convertible bonds.

In the twelve months through the end of December 2023, DWS Invest Conservative Opportunities recorded an appreciation of 1.8% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

On the bond side, the sub-fund invested predominantly in DWS Invest Euro High Yield Corporates, as well as, for example, in Xtrackers II Eurozone Government Bond UCITS ETF. The equity portfolio was represented primarily by the multi-asset funds DWS ESG Dynamic Opportunities and DWS Concept Kaldemorgen. In addition, the portfolio management hedged the exposure to equities via derivatives to some extent in the reporting period.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic

As of: December 31, 2023

competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains,

buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The two core components from

DWS Concept Kaldemorgen and DWS ESG Dynamic Opportunities made a particularly positive contribution to the overall result. Both multi-asset products benefited from their equity positions in particular. Furthermore, positions in alternative assets, such as gold, and the investment in the UCITS fund THEAM Quant-Cross Asset High Focus had a positive effect. Investments in government bonds and corporate bonds, in the high yield market (EUR) as well as in the investment-grade market (EUR) also had a positive effect on the sub-fund's performance. However, duration management via derivative positions and equity hedging via derivatives had a significant adverse effect on the result.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
70% iBoxx Euro Overall Index, 30% MSCI All Country World Index, in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 42.182 |
| Highest market risk exposure ..... | % | 65.371 |
| Average market risk exposure ..... | % | 51.591 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 164 983 826.06 as of the reporting date.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting party for derivatives (with the exception of forward currency transactions)

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Deutsche Bank AG, Goldman Sachs Bank Europe SE, Royal Bank of Canada (UK) and State Street Bank International GmbH.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

| Class FD 0.39% p.a., | Class LC 0.84% p.a., |
| Class LD 0.84% p.a., | Class NC 1.03% p.a., |
| Class ND 1.05% p.a.  |                      |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

Further costs, charges and fees were incurred at the level of the target funds. The fund invested more than 20% of its assets in target funds. If the target funds publish a TER themselves, this will be taken into account at fund level (synthetic TER). If a TER is not published at target fund level, the all-in fee / management fee will be used for the calculation. The synthetic TER was:

|                      |                      |
|----------------------|----------------------|
| Class FD 0.58% p.a., | Class LC 1.03% p.a., |
| Class LD 1.03% p.a., | Class NC 1.22% p.a., |
| Class ND 1.24% p.a.  |                      |

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 61 207.39.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 55.46% of all transactions. The total volume was EUR 4 903 741 698.97.

# Annual report

## DWS Invest Conservative Sustainable Bonds

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns. To this end, the sub-fund invests in interest-bearing securities of issuers having their registered offices within the European Economic Area (EEA) that finance special projects relating to environmental, social and corporate governance (ESG) issues (use-of-proceeds bonds representing a category of sustainable bonds). A conservative risk profile is pursued. The sub-fund invests at least 80% of its assets in debt instruments whose proceeds will be exclusively used for projects benefiting the environment or the climate and/or for other sustainability- or ESG- related projects (e.g., green bonds, social bonds, sustainability bonds) that typically contribute to one or more of the UN SDGs. Aspects considered when selecting investments include a focus on environmental, social and corporate governance (ESG) standards. These aspects are an integral component of the investment strategy.\*

From its inception (November 27, 2023) through the end of 2023, the sub-fund DWS Invest Conservative Sustainable Bonds achieved an appreciation of 2.7% per share (FC100 share class; BVI method; in euro).

### Investment policy in the reporting period

The sub-fund DWS Invest Conservative Sustainable Bonds was already almost fully invested shortly after its inception in late

<sup>1</sup> Launched on November 27, 2023

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

November 2023. The portfolio management invested in bonds of near-government issuers (e.g., European Investment Bank, Germany's KfW), as well as in corporate bonds, financials (bonds issued by financial service providers), mortgage bonds and government bonds. Investments were largely selected at the maximum duration (average capital commitment) of five years permitted under the investment concept. With this positioning, the sub-fund participated in the price rally during the reporting period, which saw noticeably higher bond prices coupled with markedly reduced yields. The bond portfolio additionally benefited from narrowing spreads for near-government issuers, mortgage bonds, corporate bonds and financials.

2020/852 (Taxonomy Regulation) are available at the back of the report.

\* Further details are set out in the current sales prospectus.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 9 (3) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 9 (3) of the SFDR and in Article 5 of Regulation (EU)

The format used for complete dates in security names in the investment portfolio is "day month year".

## DWS Invest Conservative Sustainable Bonds

| Net asset value per share and number of shares outstanding                        | Count/<br>currency | Net asset value per share in the respective currency |
|---|--------------------|--|
| <b>Net asset value per share</b>  |                    |  |
| Class FC100 .....   | EUR                | 102.65   |
| <b>Number of shares outstanding</b>   |                    |  |
| Class FC100 .....   | Count              | 200 000.000  |
| <b>Composition of the reference portfolio</b> (according to CSSF circular 11/512) |                    |  |
| 14.14% of portfolio value   |                    |  |
| <b>Market risk exposure (value-at-risk)</b> (according to CSSF circular 11/512)   |                    |  |
| Lowest market risk exposure .....   | %                  | 0.000  |
| Highest market risk exposure .....  | %                  | 2.380  |
| Average market risk exposure .....  | %                  | 1.622  |

The values-at-risk were calculated for the period from November 27, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 4 088 780.00 as of the reporting date.

DB = Deutsche Bank AG Frankfurt

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class FC100 0.07%<sup>1</sup>

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given reporting period.

<sup>1</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 77.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Convertibles

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns in euro. To attain this objective, the sub-fund invests worldwide in convertible and warrant-linked bonds of domestic and foreign issuers denominated in euro or hedged against the euro. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside financial performance.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The sub-fund recorded an appreciation of 4.0% per share (LC share class; BVI method; in euro) in the

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

fiscal year through the end of December 2023.

### Investment policy in the reporting period

In the past fiscal year, the portfolio management maintained the broad diversification of the portfolio in an environment of periodically intense price volatility. The sub-fund offered an internationally oriented convertible bond portfolio. The management invested primarily in securities of companies that, in their opinion, have a convincing business model

and better-than-average growth prospects.

Regionally, convertible bonds from the United States and Europe continued to make up the largest share of the portfolio in the reporting period. This was because these regions offered the largest selection of interesting and attractively valued underlyings and structures. Due to participation in new issues and additional purchases, the number of securities in the sub-fund rose to the most recent figure of 146.

In line with its orientation, the securities held in the portfolio had an average credit rating of BB+. The portfolio management focused principally on large-caps, i.e., issues of major internationally known companies with large market capitalizations. Issues from the mid-cap segment (companies with medium market capitalizations) were added for diversification. The main selection criteria included earnings and liquidity of the issuing companies, combined with their business development. Investments in high-yield convertible bonds were added from a risk perspective. These were non-investment-grade issues that generally trade in the markets at considerably higher risk premiums but also tend to exhibit noticeably elevated price volatility.

In terms of sectors, the management favored fast-growing companies from the IT sector, as well as from the industrials. Issues from the health care sector, preferably with stable earnings, were also included in the portfolio.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)

25% Citi – EuroBIG Corporate Index-A sector, 25% Citi – WorldBIG Corporate A in EUR, 25% MSCI THE WORLD INDEX in EUR, 25% STOXX 50 (11/2023 - 20/11/2023)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 63.803  |
| Highest market risk exposure | % | 110.127 |
| Average market risk exposure | % | 83.733  |

The values-at-risk were calculated for the period from January 1, 2023, through November 20, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

**Composition of the reference portfolio** (according to CSSF circular 11/512)

| Lowest market risk exposure  | % | 2.642 |
| Highest market risk exposure | % | 2.994 |
| Average market risk exposure | % | 2.825 |

## DWS Invest Convertibles

The values-at-risk were calculated for the period from November 21, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 1.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 369 204 983.69 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting party for derivatives (with the exception of forward currency transactions)

DB = Deutsche Bank AG Frankfurt

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Some or all of these securities are lent.

\*\* Does not include positions with a negative balance, if such exist.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                             |
|---------------------------|-----------------------------|
| Class CHF FCH 0.81% p.a., | Class CHF LCH 1.38% p.a.,   |
| Class FC 0.76% p.a.,      | Class FC(CE) 0.79% p.a.,    |
| Class FD 0.77% p.a.,      | Class LC 1.33% p.a.,        |
| Class LC (CE) 1.36% p.a., | Class LD 1.32% p.a.,        |
| Class NC 1.72% p.a.,      | Class PFC 0.80% p.a.,       |
| Class RC (CE) 0.43% p.a., | Class TFC 0.77% p.a.,       |
| Class TFD 0.78% p.a.,     | Class GBP DH RD 0.79% p.a., |
| Class SEK FCH 0.79% p.a., | Class SEK LCH 1.29% p.a.,   |
| Class USD FCH 0.80% p.a., | Class USD LCH 1.35% p.a.,   |
| Class USD TFCH 0.79% p.a. |                             |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                            |                              |
|----------------------------|------------------------------|
| Class CHF FCH 0.033% p.a., | Class CHF LCH 0.029% p.a.,   |
| Class FC 0.035% p.a.,      | Class FC(CE) 0.036% p.a.,    |
| Class FD 0.034% p.a.,      | Class LC 0.034% p.a.,        |
| Class LC (CE) 0.033% p.a., | Class LD 0.034% p.a.,        |
| Class NC 0.034% p.a.,      | Class PFC 0.034% p.a.,       |
| Class RC (CE) 0.035% p.a., | Class TFC 0.034% p.a.,       |
| Class TFD 0.034% p.a.,     | Class GBP DH RD 0.037% p.a., |
| Class SEK FCH 0.037% p.a., | Class SEK LCH 0.033% p.a.,   |
| Class USD FCH 0.035% p.a., | Class USD LCH 0.034% p.a.,   |
| Class USD TFCH 0.035% p.a. |                              |

of the average net asset value of the respective share class.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 4 670.61.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

|  |     |                 |  |
|--|-----|-----------------|--|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year . . . . .</b> |     |                 |  |
|  | EUR | 584 839 928.87  |  |
| 1. Distribution for the previous year . . . . .  | EUR | -388 487.29     |  |
| 2. Net outflows <sup>2</sup> . . . . .   | EUR | -323 327 918.09 |  |
| 3. Income adjustment . . . . .   | EUR | 7 376 598.72    |  |
| 4. Net investment income . . . . .   | EUR | -894 191.01     |  |
| 5. Realized gains/losses . . . . .   | EUR | -4 279 333.51   |  |
| 6. Net change in unrealized appreciation/depreciation . . . . .                        | EUR | 10 779 580.91   |  |
| <b>II. Value of the fund's net assets at the end of the fiscal year . . . . .</b>      |     |                 |  |
|  | EUR | 274 106 178.60  |  |

<sup>2</sup> Reduced by a dilution fee in the amount of EUR 3 944.62 for the benefit of the fund's assets.

### Summary of gains/losses 2023

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.57% of all transactions. The total volume was EUR 21 006 180.07.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

## DWS Invest Corporate Green Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Corporate Green Bonds seeks to generate sustained capital appreciation. To achieve this, the sub-fund invests in interest-bearing debt instruments that are issued by public, private and public-private issuers worldwide, which finance special projects relating to environmental, social and corporate governance issues (ESG themes).\* These especially comprise “green” bonds, i.e., debt securities, the proceeds of which are only permitted to be used for projects that benefit the environment and/or climate protection. These include, for example, projects in the area of renewable energy, energy-efficient construction, as well as public transport.

The sub-fund DWS Invest Corporate Green Bonds recorded an appreciation of 8.7% per share (LD share class; BVI method) in the last twelve months through the end of December 2023, and thus outperformed its benchmark, which returned 8.4% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation

\*“BVI method” performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks’ rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The sub-fund continued to invest predominantly in green bonds of international issuers. DWS has developed specific green bond guidelines that form the basis of bond selection. A check was carried out to determine whether the bond complied with the green bond principles, which are voluntary guidelines for minimum standards regarding transparency, disclosure and reporting for the issue of green bonds. These were defined by various banks, issuers, investors and environmental organizations to promote integrity in the market. With regard to the issuer structure, the investment focus was on corporate bonds and financials (bonds issued by financial service providers). Selection included ensuring that the bonds comply with DWS sustainability criteria. Companies from controversial sectors or with controversial business practices were thus excluded, as were issuers that the management considers to be neglectful in relation to the matter of climate protection. In regional terms, the sub-fund was globally positioned, although European

issues were the main focus of investment. For yield reasons, high-yield bonds were also held in the sub-fund's portfolio alongside bonds with investment-grade status (ratings of BBB- or better from the leading rating agencies).

In the reporting period, the portfolio management purchased, for example, new issues of issuers that had previously not yet issued any green bonds, thus increasing the level of diversification in the sub-fund's portfolio. The better performance of the sub-fund DWS Invest Corporate Green Bonds relative to the reference portfolio was due to the following two factors in particular. Firstly, the increased duration that was already in place at the end of the previous year helped the sub-fund to benefit from the lower interest rates during 2023. And secondly, the portfolio management increased the overall risk of the sub-fund in the fourth quarter of 2023, which also contributed to the positive investment performance. During this phase, issues from the real estate sector and bonds from banks showed particularly favorable performance. Investments in bonds with ratings in the low investment-grade range of BBB-/Baa3 also recorded above-average results.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
BBG MSCI Euro Corporate Green Bond 5% Capped

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 59.186  |
| Highest market risk exposure | % | 146.161 |
| Average market risk exposure | % | 98.076  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.3, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 40 731 323.26 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

## Market abbreviations

### Futures exchanges

MS = Morgan Stanley Bank AG

### Contracting parties for forward currency transactions

Royal Bank of Canada (UK), Société Générale and State Street Bank International GmbH.

## Exchange rates (indirect quotes)

As of December 29, 2023

|                     |     |          |   |     |   |
|---------------------|-----|----------|---|-----|---|
| British pound ..... | GBP | 0.869326 | = | EUR | 1 |
| U.S. dollar .....   | USD | 1.107000 | = | EUR | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                      |
|-----------------------|----------------------|
| Class FD 0.60% p.a.,  | Class LC 0.82% p.a., |
| Class LD 0.82% p.a.,  | Class ND 1.22% p.a., |
| Class TFC 0.62% p.a., | Class XD 0.28% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 88 910.74.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## DWS Invest Corporate Hybrid Bonds

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Corporate Hybrid Bonds seeks to generate above-average returns. To achieve this objective, it invests worldwide in interest-bearing securities, convertible bonds, warrant-linked bonds whose underlying warrants are on securities, participation and dividend-right certificates and derivatives, as well as in money market instruments and liquid assets. At least 50% of the sub-fund's assets must be invested worldwide in hybrid bonds of corporate issuers. Hybrid bonds are bonds whose structure features both debt characteristics and equity characteristics. Hybrid bonds also encompass subordinated bonds (Tier 1 and Tier 2 bonds), dividend-right certificates, convertible and warrant-linked bonds, as well as subordinated insurance bonds. Up to 100% of the sub-fund's assets may be invested in subordinated bonds. The portfolio manager seeks to hedge any currency risks in the portfolio against the euro. Derivatives can be used in hedging activities and for investments. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

In the twelve months through the end of December 2023, the sub-fund DWS Invest Corporate Hybrid Bonds recorded an appreciation of 8.8% per share (LC share class; BVI method; in euro).

As of: December 31, 2023

### Investment policy in the reporting period

In line with its investment policy, the portfolio management invested largely in corporate hybrid bonds. In terms of its sector allocation, the sub-fund was generally broadly positioned, although utility issues (electricity, energy) predominated as these companies constituted the largest proportion of issuers in the hybrid bond market. The securities held in the portfolio had both investment-grade (ratings of BBB- or better from the leading rating agencies) and non-investment-grade status as of the reporting date. Regionally, the

sub-fund was globally positioned, even if investments were focused more strongly on European – especially German and French – issues.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many

central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The investment result of the sub-fund was positively affected by price increases caused by lower interest rates and narrower risk premiums (credit spreads). Bonds from the utilities and energy sectors contributed substantially to the positive performance. The portfolio management successfully avoided loan defaults and hybrid bonds for which coupon payments were suspended. On the currency side, the focus continued to be on euro investments. Securities in the portfolio denominated in currencies other than the euro were hedged against the latter.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 1.301 |
| Highest market risk exposure | % | 4.568 |
| Average market risk exposure | % | 2.240 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.1, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 35 414 068.92 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

| U.S. dollar             | USD | 1.107000  | = EUR 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate

\*\* Does not include positions with a negative balance, if such exist.

## DWS Invest Corporate Hybrid Bonds

### Statement of income and expenses (incl. income adjustment)

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                                      |
|---------------------------|--------------------------------------|
| Class CHF FCH 0.76% p.a., | Class CHF LCH 1.05% p.a.,            |
| Class FC 0.73% p.a.,      | Class FC10 0.51% p.a.,               |
| Class FD 0.73% p.a.,      | Class LC 1.03% p.a.,                 |
| Class LD 1.03% p.a.,      | Class TFC 0.73% p.a.,                |
| Class TFD 0.75% p.a.,     | Class XC 0.28% p.a.,                 |
| Class XD 0.28% p.a.,      | Class SGD LDMH 1.06% p.a.,           |
| Class USD FCH 0.76% p.a., | Class USD FCH50 0.21% <sup>1</sup> , |
| Class USD FDH 0.77% p.a., | Class USD FDQH 0.76% p.a.,           |
| Class USD LCH 1.06% p.a., | Class USD LDMH 1.06% p.a.            |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                            |                                       |
|----------------------------|---------------------------------------|
| Class CHF FCH 0.019% p.a., | Class CHF LCH 0.021% p.a.,            |
| Class FC 0.020% p.a.,      | Class FC10 0.019% p.a.,               |
| Class FD 0.019% p.a.,      | Class LC 0.019% p.a.,                 |
| Class LD 0.019% p.a.,      | Class TFC 0.020% p.a.,                |
| Class TFD 0.008% p.a.,     | Class XC 0.017% p.a.,                 |
| Class XD 0.019% p.a.,      | Class SGD LDMH 0.019% p.a.,           |
| Class USD FCH 0.014% p.a., | Class USD FCH50 0.000% <sup>1</sup> , |
| Class USD FDH 0.011% p.a., | Class USD FDQH 0.019% p.a.,           |
| Class USD LCH 0.020% p.a., | Class USD LDMH 0.019% p.a.            |

of the average net asset value of the respective share class.

<sup>1</sup> Annualization has not been performed for share classes launched during the year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 418.68.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

| I. Value of the fund's net assets at the beginning of the fiscal year . . . . . |     | EUR           | 171 309 118.26 |
|---|-----|---------------|----------------|

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 87.33% of all transactions. The total volume was EUR 1 313 217 909.07.

## DWS Invest Corporate Hybrid Bonds

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Credit Opportunities

### Investment objective and performance in the reporting period

The sub-fund DWS Invest Credit Opportunities seeks to achieve sustained capital appreciation. To this end, it can invest worldwide in government bonds, bonds of quasi-government issuers (e.g., central banks, government authorities, local authorities and supranational institutions), asset-backed securities and asset-backed bonds, as well as in corporate bonds and bonds of issuers from emerging markets. Derivatives may be used for investment purposes. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG factors) are taken into consideration alongside the financial performance.\*

In the twelve months through the end of December 2023, the sub-fund DWS Invest Credit Opportunities recorded an appreciation of 6.8% per share (FC share class; BVI method; in euro).

### Investment policy in the reporting period

In line with its investment policy, the portfolio management invested predominantly in corporate bonds and financials (bonds issued by financial service providers). In terms of region, the sub-fund was globally positioned, although interest-bearing instruments from the United States and from Europe were the main focus of investment. Most of the issues held in the portfolio had investment-grade status as of the end of December 2023.

"BVI method" performance, i.e., excluding the initial sales charge.  
Past performance is no guide to future results.

As of: December 31, 2023

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central

banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In the face of the higher inflation rates and the resulting risk of a further rise in interest rates, the portfolio management reduced the interest rate risks in the sub-fund portfolio during the first quarter of 2023. In addition, the credit risks were reduced noticeably within the bond portfolio in the second quarter of 2023 in the face of what the portfolio management considered to be significantly increased market risks, more constrictive financing conditions and low risk premiums, especially in relation to high-yield bonds. As the year progressed, the average portfolio duration was gradually increased again and, in the fourth quarter of 2023, the credit risk was also slightly raised due to reduced

hedging. Overall, the sub-fund benefited from the growth in the yield from the corporate bonds, whereas hedging negatively impacted the portfolio's returns with respect to both interest and loans.

**Presentation of the maximum limit** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |       |
|------------------------------------|---|-------|
| Lowest market risk exposure .....  | % | 1.381 |
| Highest market risk exposure ..... | % | 3.226 |
| Average market risk exposure ..... | % | 1.801 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 63 381 608.29 as of the reporting date.

### Market abbreviations

#### Futures exchanges

MS = Morgan Stanley Bank AG

#### Contracting parties for derivatives (with the exception of forward currency transactions)

BC = Barclays Bank Ireland PLC

BNP = BNP Paribas S.A.

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Société Générale and State Street Bank International GmbH.

### Exchange rates (indirect quotes)

| As of December 29, 2023 |     |          |         |
|-------------------------|-----|----------|---------|
| British pound .....     | GBP | 0.869326 | = EUR 1 |
| U.S. dollar .....       | USD | 1.107000 | = EUR 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

| Realized gains/losses  | EUR        | -4 251 472.94        |  |
| <b>Capital gains/losses</b>  | <b>EUR</b> | <b>-4 251 472.94</b> |  |
| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>-3 755.55</b>     |  |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 7 235.53.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                               |
|--------------------------------|-------------------------------|
| Class FC 0.66% p.a.,           | Class FD 0.03% <sup>2</sup> , |
| Class LC 0.04% <sup>2</sup> ,  | Class LD 0.04% <sup>2</sup> , |
| Class TFC 0.03% <sup>2</sup> , | Class TFD 0.04% <sup>2</sup>  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>2</sup> Annualization has not been performed for share classes launched during the year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 5 323.25.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 3.81% of all transactions. The total volume was EUR 31 840 944.51.

# Annual report

## DWS Invest CROCI Euro

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation that exceeds the benchmark (EURO STOXX 50). To achieve this objective, the sub-fund invests in large cap equities from the euro area according to the CROCI methodology and the CROCI “Euro” investment strategy, which selects the thirty shares with the lowest positive CROCI Economic Price Earnings Ratio (“CROCI Economic P/E”) from a universe comprising approximately 100 of the largest equities in the euro area by market capitalization and for which CROCI Economic P/Es are calculated.

Companies in the financial and real estate sectors are not eligible for selection. Stocks with low liquidity can also be excluded from selection. The sub-fund’s assets are periodically reconstituted in accordance with the investment strategy’s rules (re-selecting the approximately thirty shares that the fund will invest in) with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund’s assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the

“BVI method” performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calen-

dar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

DWS Invest CROCI Euro recorded in the fiscal year through Decem-

ber 31, 2023, an appreciation of 16.4% per share (LC share class; BVI method). Its benchmark, the EURO STOXX 50, recorded an increase of 22.2% in the same period (both percentages in euro terms), while the MSCI EMU Value benchmark increased by only 18.5%.

### **Investment policy in the reporting period**

The DWS Invest CROCI Euro strategy primarily determined stock selection based on economic valuation, with the sector and country allocation directly driven by the stock selection.

In terms of sector allocation, the sub-fund was broadly positioned. Industrials such as Teleperformance, Brenntag and Ryanair Holdings were a particular investment focus. There was also an emphasis on the health care sector, with positions in Bayer and UCB. In addition, there was exposure to the energy sector, with a position in ENI. In terms of country allocation, the portfolio was generally broadly diversified. The sub-fund management's investment focus was on France and Germany.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6

of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
STOXX Eurozone 50 (Net Return)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 81.627 |
| Highest market risk exposure | % | 93.858 |
| Average market risk exposure | % | 89.775 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 180 866.11 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

## DWS Invest CROCI Euro

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* Does not include positions with a negative balance, if such exist.

| Other .....  | EUR        | -65 983.37           |  |
| <b>Total expenses .....</b>  | <b>EUR</b> | <b>-2 272 362.17</b> |  |
| <b>III. Net investment income .....</b>                                      | <b>EUR</b> | <b>10 369 517.43</b> |  |
| <b>IV. Sale transactions</b>   |            |                      |  |
| Realized gains/losses .....  | EUR        | 16 640 635.22        |  |
| <b>Capital gains/losses .....</b>  | <b>EUR</b> | <b>16 640 635.22</b> |  |
| <b>V. Net gain/loss for the fiscal year .....</b>                            | <b>EUR</b> | <b>27 010 152.65</b> |  |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 1 096 338.85.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                           |
|---------------------------|---------------------------|
| Class IC 0.56% p.a.,      | Class IC50 0.41% p.a.,    |
| Class LC 1.10% p.a.,      | Class LD 1.10% p.a.,      |
| Class NC 2.09% p.a.,      | Class TFC 0.59% p.a.,     |
| Class TFD 0.60% p.a.,     | Class USD LCH 1.13% p.a., |
| Class USD TFCH 0.62% p.a. |                           |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 590 330.98.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 82.41.

# Annual report

## DWS Invest CROCI Europe SDG (in liquidation)

### Investment objective and performance in the reporting period

The objective of the investment policy was to generate long-term capital appreciation. To this end, the sub-fund invested in large-cap European equities according to the CROCI methodology and the CROCI Europe SDG investment strategy, which selected a concentrated portfolio (with a variable number of stocks and weights) taking into account the CROCI Economic Price/Earnings Ratio. The sub-fund invested predominantly in securities of European issuers that paid particular attention to environmental and social topics as well as to corporate governance (ESG) or that were active in an industrial sector that contributed, either directly or indirectly, to one of the sustainable development goals of the 2030 Agenda.\* The sub-fund's assets were periodically reconstituted in accordance with the investment strategy's rules. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager could take necessary steps to reduce the costs related to trading and market impact, including effecting the repositioning in stages over a period of time. CROCI is a registered trademark of DWS. The CROCI Group is not responsible for the management of the sub-fund or for any error or omission in the investment strategy. The investment strategy is licensed by the CROCI Group without any representations or warranties of any kind. Aspects considered when selecting investments included a focus on environmental, social and corporate governance (ESG) criteria. These

### DWS Invest CROCI Europe SDG (in liquidation)

Performance of share classes (in EUR)

| Share class | ISIN         | Since the beginning of the shortened fiscal year |
|-------------|--------------|--|
| Class LC    | LU1769938637 | 2.4%   |
| Class IC EB | LU1769938553 | 2.6%   |
| Class TFC   | LU1769938710 | 2.5%   |

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: April 11, 2023 (liquidation date)

aspects were an integral component of the investment strategy.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price

gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

DWS Invest CROCI Europe SDG (in liquidation) recorded an appreciation of 2.4% per share (LC share class; BVI method; in euro) in the reporting period from January 1, 2023, through April 11, 2023 (date of last share price calculation).

### Investment policy in the reporting period

The DWS Invest CROCI Europe SDG (in liquidation) sub-fund strategy primarily determined stock selection based on economic valu-

ation, as well as on alignment with the 17 Sustainable Development Goals (SDG) of the United Nations, with the sector and country allocation directly driven by the stock selection. The strategy was also compliant with the minimum environmental, social and governance criteria of DWS. The sub-fund was liquidated on April 17, 2023.

### Liquidation

The sub-fund DWS Invest CROCI Europe SDG (in liquidation) was liquidated effective April 11, 2023. The issue and redemption of shares was discontinued on March 13, 2023. Orders received by the order acceptance deadline were taken into account.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Europe Net Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 0.057   |
| Highest market risk exposure ..... | % | 106.557 |
| Average market risk exposure ..... | % | 73.309  |

The values-at-risk were calculated for the period from January 1, 2023, through April 11, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

## DWS Invest CROCI Europe SDG (in liquidation)

### Exchange rates (indirect quotes)

As of April 11, 2023 (liquidation date)

British pound ..... GBP      0.878767      =    EUR      1

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective April 11, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IC EB 0.14%<sup>1</sup>,                      Class LC 0.29%<sup>1</sup>,  
Class TFC 0.19%<sup>1</sup>

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for the fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 825.98.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest CROCI Global Dividends

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World (NDR)). In order to attain this, the sub-fund invests in large cap equities from industrial countries worldwide according to the CROCI methodology and the CROCI “Global Dividends” investment strategy which selects the 50 shares with the lowest positive CROCI Economic Price Earnings Ratio (“CROCI Economic P/E”) from a universe comprising at least 450 of the largest equities worldwide by market capitalization for which CROCI Economic P/Es are calculated and that also meet certain criteria for sustainable dividends. The sub-fund’s approximately 50 shares are periodically reconstituted in accordance with the investment strategy’s rules with the intention of equal weighting. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansion-

As of: December 31, 2023

ary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also

rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

In the fiscal year through December 31, 2023, DWS Invest CROCI Global Dividends recorded an appreciation of 13.7% per share (USD LC share class; BVI method). Its benchmark, the MSCI World (NDR), gained 23.8% in the same period (both percentages in U.S.

dollars). The dividend benchmark MSCI World High Dividend Yield only rose by 5.4%, however, owing to the weaker performance of the returns factor in 2023.

### Investment policy in the reporting period

The DWS Invest CROCI Global Dividends strategy primarily determined stock selection based on economic valuation after excluding stocks that did not meet various dividend sustainability screens, with the sector allocation directly driven by the stock selection.

This resulted in broad diversification in terms of sectors. The top sectors by weighting were energy, health care, cyclical consumer goods and basic materials. In terms of country allocation, the United States was the most heavily weighted with over 40% of total assets, followed by Japan and European countries.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

## DWS Invest CROCI Global Dividends

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI WORLD NET TR USD Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 83.925  |
| Highest market risk exposure | % | 124.645 |
| Average market risk exposure | % | 97.528  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 98 854.64 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                          |
|--------------------------|--------------------------|
| Class IC 0.76% p.a.,     | Class ID 0.76% p.a.,     |
| Class LC 1.55% p.a.,     | Class LD 1.55% p.a.,     |
| Class TFC 0.79% p.a.,    | Class GBP IC 0.76% p.a., |
| Class GBP ID 0.76% p.a., | Class GBP LC 1.55% p.a., |
| Class USD IC 0.76% p.a., | Class USD LC 1.55% p.a., |
| Class USD LDQ 1.55% p.a. |                          |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to USD 102 441.04.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 18.90.

# Annual report

## DWS Invest CROCI Intellectual Capital ESG

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation that exceeds the benchmark (MSCI World). To achieve this objective, the sub-fund invests in large- and mid-cap companies in any industry (in those countries classified as developed or emerging markets by the CROCI Investment and Valuation Group) that have intellectual capital according to the CROCI methodology and the systematic CROCI Intellectual Capital investment strategy. Intellectual capital is derived by the CROCI Group and is defined as research and development and advertising (brand) assets. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower

by comparison, with Chinese equity markets actually closing the year with noticeable losses.

DWS Invest CROCI Intellectual Capital ESG recorded in the fiscal year through December 31, 2023, an appreciation of 22.2% per share (LC share class; BVI method). Its benchmark, the MSCI World, recorded an increase of 19.6% in the same period (both percentages in euro terms).

### Investment policy in the reporting period

The sub-fund's strategy primarily sought to invest in global equities of companies that have intellectual capital (either as research and development or as brands), while excluding equities that do not meet criteria for growth, profitability potential, financial risk and environmental, social and governance (ESG) factors, with the sector and country allocation directly driven by the stock selection.

In terms of sector allocation, this resulted in a strong weighting in

information technology, including stocks like Apple, Microsoft and Nvidia, as well as in health care, followed by communication services such as Alphabet. The regional focus was therefore on U.S. stocks with the addition of Japanese, European and Asian equities.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 81.160  |
| Highest market risk exposure ..... | % | 107.309 |
| Average market risk exposure ..... | % | 91.840  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

| <b>V. Net gain/loss for the fiscal year</b> . . . . .                 | <b>EUR</b> | <b>2 600 300.53</b> |  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                           |
|--------------------------|---------------------------|
| Class IC EB 0.22% p.a.,  | Class LC 1.05% p.a.,      |
| Class TFC 0.52% p.a.,    | Class XC 0.40% p.a.,      |
| Class USD LC 1.05% p.a., | Class USD TFC 0.51% p.a., |
| Class USD XC 0.39% p.a.  |                           |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 18 972.76.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest CROCI Japan

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate capital appreciation that exceeds the benchmark (TOPIX 100). To achieve this objective, the sub-fund invests in large cap Japanese equities according to the CROCI methodology and the CROCI “Japan” investment strategy, which selects the thirty shares with the lowest positive CROCI Economic Price Earnings Ratio (“CROCI Economic P/E”) from a universe comprising approximately 100 of the largest Japanese equities by market capitalization and for which CROCI Economic P/Es are calculated. Companies in the financial and real estate sectors are not eligible for selection. Stocks with low liquidity can also be excluded from selection. The sub-fund’s assets are periodically reconstituted in accordance with the investment strategy’s rules (re-selecting the approximately thirty shares that the fund will invest in) with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund’s assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the reposition in stages over a period of time. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in

“BVI method” performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese

equity markets actually closing the year with noticeable losses.

DWS Invest CROCI Japan recorded in the fiscal year through December 31, 2023, an appreciation of 38.8% per share (JPY LC share class; BVI method). Its benchmark, the TOPIX 100, recorded an increase of 30.3% in the same period (both percentages in Japanese yen terms), while the MSCI Japan Value benchmark increased by 31.5% over the course of 2023.

### Investment policy in the reporting period

The DWS Invest CROCI Japan strategy primarily determined stock selection based on economic valuation, with the sector allocation directly driven by the stock selection.

In terms of sector allocation, the sub-fund was broadly positioned. Industrials such as Mitsui OSK Lines and SMC were a particular investment focus. There was also an emphasis on consumer discretionary, with positions in Suzuki Motor and Sony, as well as on health care and basic materials.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
TOPIX 100 Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 83.116  |
| Highest market risk exposure | % | 113.733 |
| Average market risk exposure | % | 94.796  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled JPY 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnote

\* Does not include positions with a negative balance, if such exist.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                              |                          |
|------------------------------|--------------------------|
| Class ICH 0.61% p.a.,        | Class LCH 1.44% p.a.,    |
| Class TFD 0.63% p.a.,        | Class JPY IC 0.58% p.a., |
| Class JPY IC7500 0.41% p.a., | Class JPY LC 1.12% p.a., |
| Class USD ICH 0.61% p.a.,    | Class USD TFC 0.60% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to JPY 7 634 028.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was JPY 0.00.

# Annual report

## DWS Invest CROCI Sectors Plus

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI World TR Net EUR (RI)). To this end, the sub-fund invests in equities of large companies in the United States, Europe and Japan according to the CROCI methodology and the CROCI "Sectors" strategy, which selects stocks with the lowest CROCI Economic Price/Earnings Ratio ("CROCI Economic P/E") from each of the three sectors with the lowest median CROCI Economic P/Es. The sectors eligible for selection are: communication services, consumer discretionary, consumer staples, health care, information technology, industrials, basic materials, utilities and energy. The sub-fund's approximately 30 shares are periodically reconstituted in accordance with the investment strategy's rules with the intention of equal weighting. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the

S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower

by comparison, with Chinese equity markets actually closing the year with noticeable losses.

In the fiscal year through December 31, 2023, DWS Invest CROCI Sectors Plus recorded an appreciation of 11.3% per share (LC share class; BVI method). Its benchmark, the MSCI World TR EUR (RI), recorded an increase of 19.6% in the same period (both percentages in euro terms). By contrast, the MSCI World Value benchmark increased by only 7.7% over the course of 2023.

### **Investment policy in the reporting period**

The DWS Invest CROCI Sectors Plus strategy initially determined the three best sectors based on economic valuation and then selected the ten best stocks from each of the chosen sectors on the same basis.

The sub-fund's most recent investment focus were the three sectors of information technology, basic materials and energy. This resulted in a wide country allocation with focuses on the United States with around 39% of portfolio assets, followed by Japan with roughly 24%, and the United Kingdom with 13%.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU)

2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

## DWS Invest CROCI Sectors Plus

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 79.051  |
| Highest market risk exposure | % | 147.913 |
| Average market risk exposure | % | 109.804 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 1968 770.22 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Bofa Securities Europe S.A., Deutsche Bank AG, Morgan Stanley Europe SE, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH and UBS AG.

| U.S. dollar     | USD | 1.107000   | = | EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year .....</b>                            | <b>EUR</b> | <b>32 284 179.06</b>  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                |                           |
|--------------------------------|---------------------------|
| Class AUD ID 0.81% p.a.,       | Class FC 0.86% p.a.,      |
| Class FCH (P) 0.88% p.a.,      | Class IC 0.80% p.a.,      |
| Class LC 1.45% p.a.,           | Class LCH (P) 1.48% p.a., |
| Class LDH (P) 1.48% p.a.,      | Class NC 2.31% p.a.,      |
| Class PFC 2.00% <sup>4</sup> , | Class TFC 0.86% p.a.,     |
| Class XC 0.49% p.a.,           | Class NOK LCH 1.48% p.a., |
| Class USD IC 0.82% p.a.,       | Class USD LC 1.46% p.a.   |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>4</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 555 639.16.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |     |               |            |                       |
|--|-----|---------------|------------|-----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year .....</b> |     |               | <b>EUR</b> | <b>787 819 012.40</b> |
| 1. Distribution for the previous year .....  | EUR | -328 374.76   |            |                       |
| 2. Net inflows <sup>2</sup> .....  | EUR | 56 813 641.91 |            |                       |
| 3. Income adjustment .....   | EUR | 3 048 984.48  |            |                       |
| 4. Net investment income .....   | EUR | 16 855 260.69 |            |                       |
| 5. Realized gains/losses .....   | EUR | 15 428 918.37 |            |                       |
| 6. Net change in unrealized appreciation/depreciation .....                        | EUR | 57 489 022.54 |            |                       |
| <b>II. Value of the fund's net assets at the end of the fiscal year .....</b>      |     |               | <b>EUR</b> | <b>937 126 465.63</b> |

<sup>2</sup> Reduced by a dilution fee in the amount of EUR 67 579.91 for the benefit of the fund's assets.

## DWS Invest CROCI Sectors Plus

---

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 539.29.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest CROCI US

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (S&P 500). In order to achieve this, the sub-fund invests in large cap U.S. equities according to the CROCI methodology and the CROCI U.S. investment strategy, which selects the forty shares with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from a universe comprising approximately 500 of the largest U.S. equities by market capitalization and for which CROCI Economic P/Es are calculated. Companies in the financial and real estate sectors are not eligible for selection. Stocks with low liquidity can also be excluded from selection. The sub-fund's assets are periodically reconstituted in accordance with the investment strategy's rules (re-selecting the approximately forty selected shares that the fund will invest in) with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the repositioning in stages over a period of time. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the

"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calen-

dar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX) also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

In the fiscal year through December 31, 2023, DWS Invest CROCI

US posted an appreciation of 17.0% per share (USD LC share class; BVI method). Its benchmark, the S&P 500, rose by 25.7% in the same period (both percentages in U.S. dollar terms). The MSCI USA Value benchmark increased by only 8.4% over the course of 2023, however.

### Investment policy in the reporting period

The DWS Invest CROCI US strategy primarily determined stock selection based on economic valuation, with the sector allocation directly driven by the stock selection.

Within a broad sector diversification, the energy sector was heavily weighted due to numerous investments in the sector, constituting around 24% of portfolio assets. The sub-fund management also focused on health care, consumer discretionary and information technology.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P 500 Net Dividends Reinvested Index (Net USD)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 93.556  |
| Highest market risk exposure | % | 127.464 |
| Average market risk exposure | % | 108.306 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

| British pound ..... | GBP | 0.785299 | = | USD | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                          |
|--------------------------|--------------------------|
| Class IC 0.59% p.a.,     | Class ICH 0.61% p.a.,    |
| Class LC 1.35% p.a.,     | Class LCH 1.47% p.a.,    |
| Class TFC 0.63% p.a.,    | Class USD IC 0.59% p.a., |
| Class USD LC 1.14% p.a., | Class USD TFC 0.63% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 44 306.53.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

# Annual report

## DWS Invest CROCI US Dividends

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (S&P 500). To achieve this objective, the sub-fund invests in large cap U.S. equities according to the CROCI methodology and the CROCI “U.S. Dividends” investment strategy, which selects the 40 shares with the lowest positive CROCI Economic Price Earnings Ratio (“CROCI Economic P/E”) from a universe comprising approximately 300 of the largest U.S. equities by market capitalization for which CROCI Economic P/Es are calculated and that also meet certain criteria for sustainable dividends. The sub-fund’s approximately 40 shares are periodically reconstituted in accordance with the investment strategy’s rules (re-selecting the approximately forty selected shares that the sub-fund will invest in) with the intention that each constituent share is equally weighted. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its

Past performance is no guide to future results.

As of: December 31, 2023

dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The

German equity market (as measured by the DAX) also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

DWS Invest CROCI US Dividends recorded in the fiscal year through December 31, 2023, an appreciation of 3.9% per share (USD LC share class; BVI method). Its benchmark, the S&P 500, rose by 25.7% in the same period (both

percentages in U.S. dollar terms). In the reporting period, the MSCI USA High Dividend Yield benchmark increased by only 5.8%.

### **Investment policy in the reporting period**

The DWS Invest CROCI US Dividends strategy primarily determined stock selection based on economic valuation after excluding stocks that did not meet various dividend sustainability screens, with the sector allocation directly driven by the stock selection.

In terms of sector allocation, the sub-fund was broadly positioned. The Management considered the most interesting securities with regard to dividend sustainability to be in the energy (Phillips 66, Oneok), health care (Pfizer, Amgen, Merck & Co), consumer staples (Kroger) and information technology (QUALCOMM, Cisco Systems) sectors.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
S&P 500 Net Dividends Reinvested Index (Net USD)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 77.077  |
| Highest market risk exposure ..... | % | 109.389 |
| Average market risk exposure ..... | % | 90.231  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

| <b>IV. Sale transactions</b>   |            |                      |  |
| Realized gains/losses .....  | USD        | -57 408.96           |  |
| <b>Capital gains/losses</b> .....  | <b>USD</b> | <b>-57 408.96</b>    |  |
| <b>V. Net gain/loss for the fiscal year</b> .....                            | <b>USD</b> | <b>5 852 072.95</b>  |  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                            |
|--------------------------|----------------------------|
| Class LC 1.11% p.a.,     | Class NC 2.09% p.a.,       |
| Class TFC 0.59% p.a.,    | Class TFD 0.61% p.a.,      |
| Class USD IC 0.57% p.a., | Class USD IC50 0.40% p.a., |
| Class USD ID 0.57% p.a., | Class USD LC 1.11% p.a.,   |
| Class USD LD 1.11% p.a., | Class USD TFC 0.60% p.a.,  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 95 392.78.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 8.55.

# Annual report

## DWS Invest CROCI World SDG (in liquidation)

### Investment objective and performance in the reporting period

The objective of the investment policy was to generate long-term capital appreciation. To this end, the sub-fund invested in large-cap equities from industrial countries worldwide according to the CROCI methodology and the CROCI “World SDG” investment strategy. In this investment strategy, the 75 shares with the lowest positive CROCI Economic Price Earnings Ratio (“CROCI Economic P/E”) were selected from an investment universe comprising at least 450 of the largest equities worldwide by market capitalization for which CROCI Economic P/Es were calculated and also satisfied environmental, social and corporate governance (ESG) criteria. The investment strategy attempted to match specific regional weightings and also limited exposure to a single economic sector to no more than 25%. The sub-fund’s assets were periodically reconstituted in accordance with the investment strategy’s rules with the intention of equal weighting. In this context, the selection of individual investments was predominantly determined by the investment strategy. CROCI is a registered trademark of DWS. The CROCI Group is not responsible for the management of the sub-fund or for any error or omission in the investment strategy. The investment strategy is licensed by the CROCI Group without any representations or warranties of any kind. Aspects considered when selecting investments included a focus on environmental, social and corporate governance (ESG) criteria.

<sup>1</sup> in USD

“BVI method” performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: April 11, 2023 (liquidation date)

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in partic-

ular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

DWS Invest CROCI World SDG (in liquidation) recorded an appreciation of 3.0% per share (LD share class; BVI method; in euro) in the reporting period from January 1, 2023, through April 11, 2023 (date of last share price calculation).

### Investment policy in the reporting period

The DWS Invest CROCI World SDG (in liquidation) sub-fund strategy primarily determined stock

selection based on economic valuation subject to regional and sector constraints, as well as on alignment with the 17 Sustainable Development Goals (SDG) of the United Nations, with the sector and country allocation directly driven by the stock selection. The strategy was also compliant with the minimum environmental, social and governance criteria of DWS. The sub-fund was liquidated on April 11, 2023.

### Liquidation

The sub-fund DWS Invest CROCI World SDG (in liquidation) was liquidated effective April 11, 2023. The issue and redemption of shares was discontinued on March 13, 2023. Orders received by the order acceptance deadline were taken into account.

### Information on the environmental and/or social characteristics

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 0.062   |
| Highest market risk exposure | % | 104.820 |
| Average market risk exposure | % | 74.274  |

The values-at-risk were calculated for the period from January 1, 2023, through April 11, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

| U.S. dollar .....  | USD | 1.092351   | = | EUR | 1 |

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective April 11, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                              |                                 |
|------------------------------|---------------------------------|
| Class ID 0.22% <sup>1</sup>  | Class LD 0.43% <sup>1</sup>     |
| Class TFC 0.23% <sup>1</sup> | Class USD IC 0.22% <sup>1</sup> |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 1 602.55.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

# Annual report

## DWS Invest CROCI World Value

(formerly: DWS Invest CROCI World)

### Investment objective and performance in the reporting period

The objective of the investment policy is to achieve capital appreciation that exceeds the benchmark (MSCI Daily TR Net EUR (RI)). In order to achieve this, the sub-fund invests in large cap equities from industrial countries worldwide according to the CROCI methodology and the CROCI "World Value" investment strategy. This investment strategy selects equities with the lowest positive CROCI Economic Price Earnings Ratio ("CROCI Economic P/E") from an investment universe comprising equities of the largest companies in the world by market capitalization from industrial countries and for which CROCI Economic P/Es are calculated. The investment strategy attempts to match specific regional weightings and also limits exposure to a single economic sector to no more than 25%. Stocks with low liquidity can also be excluded from selection. The sub-fund's assets are periodically reconstituted in accordance with the investment strategy's rules with the intention that each constituent share is equally weighted. In order to minimize impacts on performance when trading the sub-fund's assets, the sub-fund manager may take necessary steps to reduce the costs related to trading and market impact, including effecting the recomposition in stages over a period of time. When selecting investments, environmental and social aspects and the principles of good corporate governance (ESG aspects) are taken into consideration alongside the financial performance.

<sup>3</sup> in USD

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

The international equity markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the escalating strategic competition between the U.S. and China and the conflict in Israel/Gaza, but also higher inflation and weaker economic growth, led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of weakening global economic growth, recession fears were mounting among market participants. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted considerable

price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market (as measured by the DAX index) also rose sharply. Stock prices were buoyed by factors such as easing constraints on gas supply since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. Receding inflation in the euro area later in the year gave rise to market expectations of an end to the increases in interest rates and a return to rate cuts in the following year. Price gains in the emerging markets were significantly lower by comparison, with Chinese equity markets actually closing the year with noticeable losses.

In the fiscal year through December 31, 2023, DWS Invest CROCI World Value recorded an appreci-

ation of 11.2% per share (LC share class; BVI method). Its benchmark, the MSCI World TR Net EUR, recorded an increase of 19.6% in the same period (both percentages in euro). Over the same period, the MSCI World Value benchmark increased by only 7.7%.

### Investment policy in the reporting period

The DWS Invest CROCI World Value strategy primarily determined stock selection based on economic valuation subject to regional and sector constraints, with the sector allocation directly driven by the stock selection.

In terms of sector allocation, the sub-fund was broadly positioned. The energy and health care sectors were a particular investment focus. There was also an emphasis on information technology, industrials and cyclical consumer goods. In terms of country allocation, the portfolio was generally broadly diversified. However, the sub-fund management's investment focus was on the United States – most recently with around two-thirds of portfolio assets – followed by Japan and European countries.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World Net TR Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 84.919  |
| Highest market risk exposure ..... | % | 120.327 |
| Average market risk exposure ..... | % | 95.686  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 89 489.56 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                               |                         |
|-------------------------------|-------------------------|
| Class IC 0.76% p.a.,          | Class LC 1.55% p.a.,    |
| Class NC 1.19% <sup>2</sup> , | Class TFC 0.81% p.a.,   |
| Class USD IC 0.76% p.a.,      | Class USD LC 1.55% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>2</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 75 252.20.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                       |
|--|------------|-----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |            |                       |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 33.33.

# Annual report

## DWS Invest Emerging Markets IG Sovereign Debt (in liquidation)

### Investment objective and performance in the reporting period

The sub-fund seeks to achieve sustained capital appreciation relative to the benchmark (JPM EMBI Global Diversified Investment Grade). To achieve this objective, it invests worldwide in bonds issued by governments or quasi-government institutions in emerging-market countries and primarily having an investment-grade rating at the time of acquisition. In addition, investments can also be made in bonds issued or guaranteed by governments or government institutions (central banks, government authorities and supranational institutions), as well as in money market instruments, covered bonds and bank balances. The sub-fund uses derivatives for hedging and for investment purposes.

The sub-fund DWS Invest Emerging Markets IG Sovereign Debt (in liquidation) recorded an appreciation of 5.6% per share (IDH share class; BVI method) in the last twelve months through the end of December 2023, and thus outperformed its benchmark (+4.5%; both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract

As of: December 31, 2023

inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In line with its investment policy,

the sub-fund continued to invest mainly in government bonds and in bonds of state-owned enterprises from emerging markets. In the reporting period, short-term bonds in particular were overweighted to the detriment of longer maturities. In addition, the portfolio management used financial derivatives to manage the total duration of the sub-fund. Overall, the maturity of the sub-fund portfolio was predominantly shorter than that of the benchmark. This, as well as the overweighting of high-yield bonds, helped to ensure that the sub-fund DWS Invest Emerging Markets IG Sovereign Debt (in liquidation) performed better than its benchmark.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU)

2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
JP Morgan EMBI Global Diversified Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 69.447  |
| Highest market risk exposure ..... | % | 101.949 |
| Average market risk exposure ..... | % | 87.865  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 13 066 065.87 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting party for derivatives (with the exception of forward currency transactions)

GS = Goldman Sachs AG

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Bofa Securities Europe S.A., Morgan Stanley Europe SE, Royal Bank of Canada (UK), Société Générale, State Street Bank International GmbH, The Bank of New York Mellon SA and UBS AG.

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective December 29, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 1 016 875.20 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year, which are accounted for off the books. However, the current political situation makes it difficult to assess whether the dividend and interest payments by the Russian companies will be resumed at a later date.

### Footnote

\* Does not include positions with a negative balance, if such exist.

| <b>III. Net investment income</b>                                      | <b>USD</b> | <b>877 818.53</b>    |  |
| <b>IV. Sale transactions</b>   |            |                      |  |
| Realized gains/losses  | USD        | -4 503 249.55        |  |
| <b>Capital gains/losses</b>  | <b>USD</b> | <b>-4 503 249.55</b> |  |
| <b>V. Net gain/loss for the fiscal year</b>                            | <b>USD</b> | <b>-3 625 431.02</b> |  |

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of USD 1364.07.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IDH 0.50% p.a., Class TFCH 0.77% p.a.,  
Class USD IC 0.47% p.a.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

Class IDH 0.018% p.a., Class TFCH 0.014% p.a.,  
Class USD IC 0.020% p.a.

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 14 558.35.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |     | USD             | 120 981 851.19 |
|--|-----|-----------------|----------------|
| 1. Distribution for the previous year  | USD | -2 234 860.03   |                |
| 2. Net outflows  | USD | -105 250 775.75 |                |
| 3. Income adjustment   | USD | -6 668 544.16   |                |

| 2021  | Class IDH    | EUR            | 96.59  |
|   | Class TFCH   | EUR            | 111.90 |
|   | Class USD IC | USD            | 104.36 |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.74% of all transactions. The total volume was USD 4 544 011.43.

## DWS Invest Emerging Markets IG Sovereign Debt (in liquidation)

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Emerging Markets Opportunities

### Investment objective and performance in the reporting period

The objective of the investment policy of DWS Invest Emerging Markets Opportunities is to generate above-average returns. To achieve this objective, the sub-fund invests in interest-bearing securities of issuers with their registered office or principal business activity in an emerging market country. The investment policy can also be implemented using suitable derivative financial instruments.

In the reporting period from the beginning of January through the end of December 2023, DWS Invest Emerging Markets Opportunities recorded an appreciation of 8.3% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

In line with its investment policy, the sub-fund invested in higher-yielding bonds with lower credit quality relative to German or U.S. Treasuries. Investments were made primarily in government bonds and in corporate bonds of state-owned enterprises as well as in supranational development banks from emerging markets. The issues with investment-grade status (ratings of BBB- or better from the leading rating agencies) held in the portfolio made up approximately 31.4% of the bond assets as of the reporting date. The majority of the remaining investments were high-yield bonds with lower credit quality. In terms of its regional allocation, the bond sub-fund was generally globally positioned.

As of: December 31, 2023

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes

aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In terms of issuer structure, the investment focus of the sub-fund was on public issuers due to their greater relative rating stability, solvency and liquidity. Private corporate bonds were only held as remaining investments. As part of its concept, the portfolio management gave a higher weighting to high-yield bonds featuring higher risk premiums, and hence wider yield spreads, for yield reasons. This mainly included issues from the easterly countries of Eastern Europe, Latin America and Africa.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclo-

asures in the financial services sector (“SFDR”).

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

| Class ID50 .....  | Count              | 505 372.000   |
| Class LC .....  | Count              | 4 108.000   |
| Class XC .....  | Count              | 237 415.000   |

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
JP Morgan EMBI Global Diversified High Yield Index in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 60.322  |
| Highest market risk exposure ..... | % | 104.117 |
| Average market risk exposure ..... | % | 74.771  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.6, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 97 403 740.75 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 608 542.11 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year, which are accounted for off the books. However, the current political situation makes it difficult to assess whether the dividend and interest payments by the Russian companies will be resumed at a later date.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                         |                        |
|-------------------------|------------------------|
| Class FC 0.89% p.a.,    | Class IC 0.45% p.a.,   |
| Class IC100 0.24% p.a., | Class ID50 0.30% p.a., |
| Class LC 1.19% p.a.,    | Class XC 0.28% p.a.    |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.04% of all transactions. The total volume was EUR 1 387 804.90.

# Annual report

## DWS Invest Emerging Markets Sovereign Debt (in liquidation)

### Investment objective and performance in the reporting period

The sub-fund sought to achieve sustained capital appreciation relative to the benchmark (JPM EMBI Global Diversified). To achieve this objective, it invested worldwide in bonds issued by governments or quasi-government institutions in emerging market countries. In addition, investments could be made in bonds issued or guaranteed by governments or government institutions (central banks, government authorities and supranational institutions), as well as in money market instruments, covered bonds and bank balances. The sub-fund used derivatives for hedging and for investment purposes.

In the period from the beginning of January 2023 through April 12, 2023 (liquidation date), the sub-fund DWS Invest Emerging Markets Sovereign Debt (in liquidation) recorded a decline of 1.3% per share (LDH share class; BVI method) and thus fell short of its benchmark (0.0%; both percentages in euro terms).

### Investment policy in the reporting period

In line with its investment policy, the sub-fund invested in government bonds and in corporate bonds of state-owned enterprises from emerging markets. These included both issues with investment-grade status and high-yield bonds with lower credit quality.

With a view to the upcoming liquidation of the sub-fund, the securities in the portfolio were progressively sold up until the end of the reporting period (April 12, 2023).

### Liquidation

The sub-fund DWS Invest Emerging Markets Sovereign Debt (in liquidation) was liquidated effective April 12, 2023, following a resolution to that effect adopted by the Board of Directors of the SICAV and the approval of the Luxembourg supervisory authority CSSF. The issue of new shares of the sub-fund was discontinued effective March 13, 2023. Investors could redeem sub-fund shares until March 13, 2023.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into

account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

## DWS Invest Emerging Markets Sovereign Debt (in liquidation)

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
JP Morgan EMBI Global Diversified Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 0.000   |
| Highest market risk exposure | % | 124.105 |
| Average market risk exposure | % | 92.015  |

The values-at-risk were calculated for the period from January 1, 2023, through April 12, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 0.00 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, Bofa Securities Europe S.A., Goldman Sachs Bank Europe SE, HSBC France and Royal Bank of Canada (UK).

### Exchange rates (indirect quotes)

As of April 12, 2023 (liquidation date)

Euro ..... EUR      0.911120      =    USD      1

### Notes on valuation

Against the backdrop of the resolution of the Board of Directors of the SICAV to put the fund into liquidation effective April 12, 2023, the going-concern basis was relinquished and the financial statements were prepared on the basis of liquidation values. Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

Class IDH 0.15%<sup>1</sup>,                      Class LDH 0.34%<sup>1</sup>,  
Class USD XC 0.12%<sup>1</sup>

As well, the additional income from securities lending resulted in a performance-based fee of

Class IDH 0.003%<sup>1</sup>,                      Class LDH 0.003%<sup>1</sup>,  
Class USD XC 0.002%<sup>1</sup>.

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year

#### Transaction costs

The transaction costs paid in the reporting period amounted to USD 379.08.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## DWS Invest Emerging Markets Sovereign Debt (in liquidation)

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 379.08.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest Enhanced Commodity Strategy

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest Enhanced Commodity Strategy is to achieve a long-term capital appreciation that exceeds the benchmark Bloomberg Commodity Index Total Return by investing primarily in the commodity markets. In order to achieve this, the sub-fund mainly allocates its assets to commodity-linked investments among a variety of different commodity sectors, including agriculture, industrial and precious metals, and energy. In addition, the sub-fund may invest in financial derivative instruments whose underlings include commodity indices. Up to 100% of the sub-fund's assets may be invested in fixed-rate investments. Debt securities without an investment-grade rating may have a maximum share of 10% of net assets of the sub-fund.

In the reporting period from January 1, 2023, through the end of December 2023, DWS Invest Enhanced Commodity Strategy recorded a depreciation of 7.3% per share (USD TFC share class; BVI method). Its benchmark, the Bloomberg Commodity Index Total Return, lost 7.9% in the same period (both percentages in U.S. dollar terms).

### Investment policy in the reporting period

The sub-fund used total return swaps indexed to various commodity indices to gain exposure in commodities.

2023 was a challenging year for commodities. The Bloomberg Commodity Index Total Return

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

(USD) lost 7.9%, which reflected the downturn of a wide range of various commodity sectors. The only exception was the precious metals sector where the gold index rose by more than 7.1%. The index's hedging transaction segment also performed well and increased by approximately 4.6% during the year.

### Information on the environmental and/or social characteristics

This financial product qualified as a product in accordance with Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

The following is the required disclosure in accordance with

Article 7 of Regulation (EU) 2020/852 of June 18, 2020, on the establishment of a framework to facilitate sustainable investment: The investments underlying this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

For the financial product, the following information in accordance with Article 7 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector is provided: The portfolio management did not consider principal adverse impacts on sustainability factors for this financial product, because (as stated above) no ESG and/or sustainable investment policies were pursued with the product.

The format used for complete dates in security names in the investment portfolio is "day month year".

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Bloomberg Commodity Index Total Return

## DWS Invest Enhanced Commodity Strategy

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 43.054  |
| Highest market risk exposure | % | 113.295 |
| Average market risk exposure | % | 81.520  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 2.5, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 288 522 660.54 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for derivatives (with the exception of forward currency transactions)

GS = Goldman Sachs Bank Europe SE

JP = J.P. Morgan SE

#### Contracting parties for forward currency transactions

Goldman Sachs Bank Europe SE, Société Générale and State Street Bank International GmbH.

### Exchange rates (indirect quotes)

As of December 29, 2023

|                  |     |            |       |   |
|------------------|-----|------------|-------|---|
| Swiss franc      | CHF | 0.838100   | = USD | 1 |
| Euro             | EUR | 0.903342   | = USD | 1 |
| Japanese yen     | JPY | 141.495000 | = USD | 1 |
| Singapore dollar | SGD | 1.319800   | = USD | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Does not include positions with a negative balance, if such exist.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                                   |                               |
|-----------------------------------|-------------------------------|
| Class CHF IC 0.64% <sup>1</sup> , | Class CHF LC 1.35% p.a.,      |
| Class IC 0.76% p.a.,              | Class LC 1.35% p.a.,          |
| Class LCH 1.36% p.a.,             | Class TFCH 0.93% p.a.,        |
| Class JPY JC 0.86% p.a.,          | Class JPY JCH (P) 0.89% p.a., |
| Class SGD LC 1.35% p.a.,          | Class USD IC 0.76% p.a.,      |
| Class USD LC 1.35% p.a.,          | Class USD TFC 0.89% p.a.      |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>1</sup> Annualization has not been performed for share classes liquidated during the year

### Transaction costs

The transaction costs paid in the reporting period amounted to USD 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

2023

|  |     |                |            |                       |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was USD 0.00.

# Annual report

## DWS Invest ESG Asian Bonds

### Investment objective and performance in the reporting period

The sub-fund seeks to generate capital appreciation that exceeds the benchmark (the J.P. Morgan JACI Investment Grade Total Return Index). To achieve this objective, it invests in interest-bearing securities issued by governments of Asian countries, Asian government agencies, municipal administrations in Asian countries or companies having their registered offices in an Asian country, as well as in securities of supranational institutions (securities issued in Asian currencies) and securities of non-Asian companies issued in Asian currencies. The interest-bearing securities may be denominated in U.S. dollars, other currencies of G7 countries or in Asian currencies. The sub-fund's assets are invested predominantly in interest-bearing securities that have an investment-grade rating at the time of acquisition. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration.

The sub-fund DWS Invest ESG Asian Bonds recorded an appreciation of 4.0% per share (USD LC share class; BVI method) in the last twelve months through the end of December 2023 but underperformed against its benchmark, which returned (+7.4%; both percentages in U.S. dollar terms).

### Investment policy in the reporting period

The sub-fund DWS Invest ESG Asian Bonds continued to balance its investments between USD denominated bonds from

Past performance is no guide to future results.

As of: December 31, 2023

both developed-market and emerging-market Asia and U.S. Treasuries. In terms of geographical weighting, the portfolio was broadly diversified, including in India, Indonesia, Japan, South Korea and Australia. As of the

reporting date, the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies). The portfolio duration remained below benchmark throughout 2023.

In the phase of rising yields on U.S. government bonds, the sub-fund concentrated its investments on short-term bonds with a residual maturity of one to two years. The aim here was to minimize the risk of changes in interest rates. In addition, the sub-fund had a strong positioning in floating rate notes (FRN) amid a strong rise in yields on U.S. government bonds. Toward the end of 2023 when yields on U.S. government bonds declined sharply again, the FRN positions were sold and price gains were realized.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central

banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

Sentiment in the Asian credit markets improved compared with 2022 as investors distanced themselves from the Chinese property bust within the high-yield segment, diversifying their investments into other parts of Asia. Asian investors wishing to broaden their positioning also focused on Australia and Japan.

The sub-fund's investments in high-quality Japanese financials (promissory note loans from banks and insurers) as well as in South Korean investment-grade bonds contributed substantially to the appreciation of the sub-fund DWS Invest ESG Asian Bonds on account of their interest income.

Due to the shorter maturity date of its bond portfolio, the sub-fund did not match its benchmark. The rally in U.S. government bonds in late 2023 was another contributory factor in its underperformance.

## DWS Invest ESG Asian Bonds

### Composition of the reference portfolio (according to CSSF circular 11/512)

JP Morgan ACI - Investment Grade

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                              |   |        |
|------------------------------|---|--------|
| Lowest market risk exposure  | % | 34.702 |
| Highest market risk exposure | % | 88.138 |
| Average market risk exposure | % | 57.882 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled USD 7.53 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Morgan Stanley Bank AG, Société Générale, State Street Bank International GmbH, The Bank of New York Mellon SA, Toronto Dominion Bank and UBS AG.

### Exchange rates (indirect quotes)

As of December 29, 2023

|                  |     |          |       |   |
|------------------|-----|----------|-------|---|
| Brazilian real   | BRL | 4.857600 | = USD | 1 |
| Swiss franc      | CHF | 0.838100 | = USD | 1 |
| Euro             | EUR | 0.903342 | = USD | 1 |
| Singapore dollar | SGD | 1.319800 | = USD | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

\* Floating interest rate.

\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\*\* Does not include positions with a negative balance, if such exist.

of the average net asset value of the respective share class.

<sup>3</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets 2023

| I. Value of the fund's net assets at the beginning of the fiscal year . . . . . |     | USD           | 273 652 331.78 |
|---|-----|---------------|----------------|
| 1. Distribution for the previous year / Interim distribution . . . . .          | USD | -451 343.62   |                |
| 2. Net outflows <sup>2</sup> . . . . .  | USD | -4 849 875.58 |                |
| 3. Income adjustment . . . . .  | USD | 381 876.25    |                |
| 4. Net investment income . . . . .  | USD | 9 681 895.39  |                |
| 5. Realized gains/losses . . . . .  | USD | -7 899 162.86 |                |
| 6. Net change in unrealized appreciation/depreciation . . . . .                 | USD | 11 754 289.55 |                |
| II. Value of the fund's net assets at the end of the fiscal year . . . . .      |     | USD           | 282 270 010.91 |

<sup>2</sup> Reduced by a dilution fee in the amount of USD 1 631.85 for the benefit of the fund's assets.

## DWS Invest ESG Asian Bonds

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.18% of all transactions. The total volume was USD 14 254 420.50.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

## DWS Invest ESG Climate Tech

### Investment objective and performance in the reporting period

The sub-fund DWS Invest ESG Climate Tech invests mainly in equities, share certificates, participation and dividend-right certificates, convertible bonds and equity warrants of companies whose business activities are predominantly geared to counteracting climate change or mitigating its effects. Investments are focused particularly on companies that offer products, services and solutions that contribute to the reduction of emissions through sustainable energy generation, efficient energy transmission, or increases in energy efficiency. Additionally considered for investment are companies engaged in tackling the consequences of climate change in sectors such as health care, water and agriculture, or in emergency response and crisis management. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the fiscal year from January 1, 2023, through December 31, 2023, the sub-fund recorded an appreciation of 6.2% per share (LD share class; BVI method; in euro).

### Investment policy in the reporting period

In the past fiscal year, the long-term strategy of selecting companies through comprehensive fundamental analysis of individual stocks was maintained. The focus was primarily on high “theme

“BVI method” performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

purity”\*\* companies whose products or services make a significant contribution to decarbonizing the energy mix and decoupling energy consumption from global economic growth, but the portfolio also includes companies that provide solutions to deal with the irreversible consequential damage of climate change that has already occurred today. Special attention has always been paid to the quality and sustainability of the business model, the quality of the management, the organic growth potential, the solidity of the balance sheet and especially the valuation of a company.

In the reporting period, the markets were dominated by inflation rate developments in the largest economies and the possible reactions of the central banks. The rise in interest rates in the United States negatively impacted share price performance during most of the year, especially for cyclical sectors and business models.

The sub-fund’s performance was determined by both sector allocation and stock selection, and lagged behind the MSCI World All Country (total return, in euro). During the reporting period, the structural underweighting of sectors that were of limited thematic

relevance to the area of climate tech or that could not be invested in due to their weak qualification in terms of the environment, such as energy (oil & gas), financials and the health care sector, made a positive contribution to sector allocation.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI All Country World Index, in EUR

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 94.711  |
| Highest market risk exposure | % | 149.710 |
| Average market risk exposure | % | 117.297 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

## DWS Invest ESG Climate Tech

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                               |
|---------------------------|-------------------------------|
| Class FC 0.86% p.a.,      | Class IC 0.57% p.a.,          |
| Class LC 1.61% p.a.,      | Class LD 1.61% p.a.,          |
| Class NC 2.12% p.a.,      | Class PFC 2.33% p.a.,         |
| Class TFC 0.87% p.a.,     | Class TFD 0.86% p.a.,         |
| Class XC 0.45% p.a.,      | Class GBP D RD 0.85% p.a.,    |
| Class JPY FC 0.86% p.a.,  | Class USD FC 0.89% p.a.,      |
| Class USD LC 1.61% p.a.,  | Class USD LCH (P) 1.64% p.a., |
| Class USD TFC 0.86% p.a., | Class USD TFCH (P) 0.88% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 407 495.81.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                       |
|--|------------|-----------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year .....</b> |            |                       |
| 1. Distribution for the previous year .....  | EUR        | 763 814 459.03        |
| 2. Net inflows <sup>2</sup> .....  | EUR        | -6 724 649.99         |
| 3. Income adjustment .....   | EUR        | -7 849 207.78         |
| 4. Net investment income .....   | EUR        | -990 497.30           |
| 5. Realized gains/losses .....   | EUR        | -1 610 063.86         |
| 6. Net change in unrealized appreciation/depreciation .....                        | EUR        | -43 071 647.04        |
| <b>Value of the fund's net assets at the end of the fiscal year .....</b>          | <b>EUR</b> | <b>796 281 872.11</b> |

<sup>2</sup> Reduced by a dilution fee in the amount of EUR 107 193.42 for the benefit of the fund's assets.

## DWS Invest ESG Climate Tech

---

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG Dynamic Opportunities

### Investment objective in the reporting period

The sub-fund DWS Invest ESG Dynamic Opportunities (the “feeder fund”) was a Directive-compliant feeder fund of the UCITS master fund DWS ESG Dynamic Opportunities (the “master fund”). In this capacity, the feeder fund permanently invested at least 85% of the sub-fund’s assets in shares of the master fund. At least 60% of the master fund’s assets were invested in equities that are admitted for trading in an official market or admitted to or included in an organized market, and which are not units of an investment fund.

This master-feeder structure was dissolved effective November 21, 2023, meaning that the sub-fund DWS Invest ESG Dynamic Opportunities is no longer a feeder fund of its previous UCITS master fund, DWS ESG Dynamic Opportunities. However, even after the dissolution of the master-feeder structure, the investment universe of the sub-fund DWS Invest ESG Dynamic Opportunities remained the same as the investment universe of its former master fund.

Additional information regarding the expenses of the former master fund or feeder fund is provided on page 1,963 of this report. The management company of the former master fund is DWS Investment GmbH, Mainzer Landstraße 11-17, 60329 Frankfurt/Main, Germany, which is also where the former master fund’s report and further information (sales prospectus, annual report, etc.) can be obtained.

“BVI method” performance, i.e., excluding the initial sales charge.  
 Past performance is no guide to future results.

As of: December 31, 2023

The sub-fund DWS Invest ESG Dynamic Opportunities seeks to generate the highest possible appreciation of capital. To achieve this objective, it mainly invests in equities of German and foreign issuers. In these investments, preference is given to companies that meet demanding requirements regarding market position, growth potential and ongoing company strategy. In addition to equities, the sub-fund may also invest in interest-bearing securities, certificates, funds, derivatives and money market instruments. Within the framework of the securities selection process, the environmental and social performance of the company as well as its corporate governance (ESG criteria) are taken into consideration alongside the financial performance.\*

### Investment performance in the reporting period

In the past twelve months through the end of December 2023, the sub-fund DWS Invest ESG Dynamic Opportunities recorded an appre-

ciation of 10.4% per share (LC share class; in euro; BVI method).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the

majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence. The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

The sub-fund DWS Invest ESG Dynamic Opportunities invested primarily in equities of domestic and foreign issuers, also via its former master fund. Equities, which were slightly underweight year-over-year, remained the focus of investment. The geographical focus for the equity investments remained on stocks of companies from the leading industrial countries, especially those from the United States and Europe. Japan exposures were modestly increased in the reporting period. In terms of sector allocation, the portfolio management continued to rely on broad diversification. During 2023, consumer goods, health care and utilities were stocked up and the weighting in industrials, financials and communication stocks was reduced. Health care continued to represent the largest sector weight. The equity portfolio contributed substantially to the investment gains, with the biggest gains coming from the areas of technology, communication services and finance. By contrast, equities from the health care sector disappointed, eroding the sub-fund's appreciation.

Particularly in the first quarter of 2023, the weighting of the bond portfolio in the former master fund was increased, with a focus on short-dated bonds. In terms of issuers, the portfolio management concentrated on government bonds, bonds of near-government issuers, and European and U.S. corporate bonds. ETFs (exchange-traded funds) – mostly investment-grade funds – rounded off the bond portfolio.

The gold position held in the portfolio (via an exchange-traded commodity (ETC) instrument) made a noticeable contribution to the sub-fund's positive overall investment result. This position was trimmed in the fourth quarter of 2023, realizing price gains.

The foreign currencies to which the sub-fund had exposure as part of its investments in securities and via currency futures included the U.S. dollar. However, foreign-currency positions narrowed the appreciation of the sub-fund on account of the euro gains against the U.S. dollar, for example.

### Information on the environmental and/or social characteristics

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

\* Further details are set out in the current sales prospectus.

The format used for complete dates in security names in the investment portfolio is "day month year".

### Composition of the reference portfolio (according to CSSF circular 11/512)

80% MSCI All Country World Net TR Index - in EUR, 20% iBoxx Euro Overall Index

### Market risk exposure (value-at-risk) (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 62.704  |
| Highest market risk exposure ..... | % | 100.313 |
| Average market risk exposure ..... | % | 78.121  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 19 219 512.39 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Barclays Bank Ireland PLC, BNP Paribas S.A., Deutsche Bank AG, Goldman Sachs Bank Europe SE and Royal Bank of Canada (UK).

| U.S. dollar      | USD | 1.107000    | = EUR | 1 |

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\* Does not include positions with a negative balance, if such exist.

| <b>IV. Net gain/loss for the fiscal year</b>                           | <b>EUR</b> | <b>11 410 221.77</b> |  |

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                           |
|--------------------------|---------------------------|
| Class FC 0.65% p.a.,     | Class FD 0.58% p.a.,      |
| Class IC 0.11% p.a.,     | Class LC 1.15% p.a.,      |
| Class NC 1.65% p.a.,     | Class PFC 2.13% p.a.,     |
| Class TFC 0.57% p.a.,    | Class USD FCH 0.60% p.a., |
| Class USD ICH 0.17% p.a. |                           |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 56 944.11.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets 2023

| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |            |                       |  |
|--|------------|-----------------------|--|
| 1. Distribution for the previous year  | EUR        | -1 292 651.80         |  |
| 2. Net outflows <sup>2</sup>   | EUR        | -13 715 908.57        |  |
| 3. Income adjustment   | EUR        | 1 205 403.37          |  |
| 4. Net investment income   | EUR        | -790 605.60           |  |
| 5. Realized gains/losses   | EUR        | 12 200 827.37         |  |
| 6. Net change in unrealized appreciation/depreciation                        | EUR        | 1 244 123.74          |  |
| <b>II. Value of the fund's net assets at the end of the fiscal year</b>      |            |                       |  |
|  | <b>EUR</b> | <b>126 840 998.21</b> |  |

<sup>2</sup> Reduced by a dilution fee in the amount of EUR 7 118.77 for the benefit of the fund's assets.

## Summary of gains/losses 2023

| <b>Realized gains/losses (incl. income adjustment)</b>            |            |                      |  |
|---|------------|----------------------|--|
|   | <b>EUR</b> | <b>12 200 827.37</b> |  |
| from:   |            |                      |  |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 924.37.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

In the case of a final distribution, any remaining net income for the fiscal year is reinvested.

## DWS Invest ESG Emerging Markets Top Dividend

### Investment objective and performance in the reporting period

DWS Invest ESG Emerging Markets Top Dividend invests mainly in companies having their registered offices or their principal business activity in the emerging markets. Dividend yields, as well as their sustainability, amount and growth, are major criteria in the selection of stocks. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\* In the fiscal year through the end of December 2023, the sub-fund recorded an appreciation of 7.4% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fis-

As of: December 31, 2023

cal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

While the equity markets of the industrial countries recorded significant price increases in the 2023 calendar year, price gains in the stock exchanges of the emerging markets were noticeably lower. A major portion of the positive performance was achieved especially in the fourth quarter of 2023, as investors increasingly expected an end to the cycle of interest rate hikes and a decline in interest rates in the following year. China's equity markets, however, closed noticeably in the red over the year as a whole. The principal factors influencing this development were the persistent debt problems of some companies, especially in the real estate sector, as well as weakness in the consumer sector and the lack of a significant economic

recovery in China; additional adverse factors included a deflationary environment, the national debt and unfavorable demographic developments. Indian equities, on the other hand, which many investors viewed as increasingly attractive compared with Chinese companies, performed noticeably better given a friendlier macroeconomic environment and positive demographic developments in India. The same was true for the equity markets in Brazil and Mexico (favored by their proximity to the strong United States equity market).

Against this backdrop, the sub-fund's underweight in China – compared with the MSCI Emerging Markets Index – proved advantageous, as did the higher weighting of equities from Brazil, Mexico and South Korea. However, the lower weighting of Indian equities was disadvantageous.

The investment focus was on high-dividend stocks in the financial, information technology and communication services sectors, among others.

The sub-fund's performance benefited from the absence of companies from the real estate and basic materials sectors from the portfolio.

Equities from the IT and communication services sector made an above-average contribution to the sub-fund's performance overall, as did the selection of individual stocks in the consumer staples sector. The portfolio positions with the best price performance included the semiconductor manufacturers SK hynix and Taiwan Semiconductor Manufacturing, as well as the IT hardware producer Lenovo. SK hynix is a manufacturer of memory semiconductors specializing in DRAM and NAND flash memory chips. The company benefited from the memory cycle recovery and its strong DRAM positioning, which resulted in significant earnings growth, with free cash flow generation also helping to improve the balance sheet. SK hynix reached an impressive business milestone in 2023 with a dominant position in HBM3 memory, which is important for generative innovation in artificial intelligence (AI). In addition, SK hynix successfully transitioned to DDR5 memory technology, which enabled the company to secure a higher share among key customers (in the PC/server space) in the early stages. Taiwan Semiconductor Manufacturing (TSMC) is the global leader in foundry semiconductor manufacturing,

with the largest market share. TSMC has demonstrated impressive performance in developing cutting-edge technologies and producing products with high and increasing structural profitability. The company was the world's sole manufacturer of NVIDIA's AI server chips and has broad and diversified exposure to many end markets and customers. As a result, it benefited greatly from the trend and the demand in the field of artificial intelligence, which contributed to the very positive development of its share price. As the world's largest PC manufacturer, Lenovo was also the leader in China, where it had a market share of over 30%. The company was considered well positioned to benefit from AI technology. With the start of a demand cycle for PCs increasingly expected in the second half of 2023, the company's equities already performed strongly in the first half of 2023. That performance was also supported by a faster recovery of margins and a valuation premium associated with the expectation of an upcoming AI PC cycle beginning in 2024.

Stock selection in the financial sector, however, made a below-average contribution to the sub-fund's performance in the reporting period. In particular, the price performance of the Chinese insurers Ping An Insurance and AIA Group, and that of the exchange operator Hong Kong Exchanges and Clearing, fell short of expectations.

Ping An Insurance is one of China's largest insurance companies, offering products and services in the business areas of financial ser-

vices, health care, auto services, real estate and smart city solutions. AIA and its subsidiaries form the largest pan-Asian life insurance group. The lockdowns in China in 2021 and 2022 resulted in very low demand for AIA's insurance products. Demand rebounded sharply following the reopening in December 2022, but macroeconomic data from the second quarter of 2023 indicated a very fragile Chinese economy for the whole of 2023. Dependencies in the Chinese real estate market via investment products also contributed to the below-average performance. One of the biggest negative factors was the structural reduction in the HK/China weighting by investors, triggered, among other things, by geopolitical tensions with the United States, a weak economic recovery after the reopening and potential influence by the government.

Hong Kong Exchanges and Clearing (HKEx) is one of the world's major exchange operators, operating in equities, commodities, fixed rate securities and in other financial markets, products and services, including the London Metals Exchange. The equity's price performance shadowed that of Ping An Insurance and AIA, with an initially weaker performance in 2022 that only transitioned to a strong price recovery as the year ended on expectations of an economic recovery in light of the reopening. However, disappointing macroeconomic data and growing geopolitical tensions created selling pressure from the second quarter through the fourth quarter of 2023. Trading in Hong Kong securities experienced a structural decline. In addition, demand

for initial public offerings (IPOs) was very weak, particularly in the technology sector, given China's implementation of data security reviews.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI Emerging Markets Net EUR (EUR levels)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 87.386  |
| Highest market risk exposure | % | 110.467 |
| Average market risk exposure | % | 97.995  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 1 509.52 as of the reporting date.

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

Russian equities, bonds and depositary receipts such as ADRs/GDRs were written down in full to a memo value of EUR 0.0001 as of March 3, 2022, because these were either prohibited from exchange trading or western investors were excluded from Russian markets. This valuation method will be reviewed at the regular meetings of DWS's Pricing Committee.

The fund expected cash inflows of EUR 398 760.59 from outstanding dividend and interest payments by Russian companies as of the end of the fiscal year, which are accounted for off the books. However, due to the current political situation, it is not possible to forecast whether the dividend and interest payments by the Russian companies will be resumed at a later date.

<sup>1</sup> For further information, please refer to the notes to the financial statements.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                           |                          |
|---------------------------|--------------------------|
| Class FC 0.89% p.a.,      | Class LC 1.64% p.a.,     |
| Class LD 1.64% p.a.,      | Class NC 2.35% p.a.,     |
| Class ND 2.35% p.a.,      | Class PFC 2.43% p.a.,    |
| Class PFD 2.45% p.a.,     | Class TFC 0.79% p.a.,    |
| Class TFD 0.83% p.a.,     | Class USD FC 0.89% p.a., |
| Class USD TFC 0.90% p.a., | Class USD TFD 0.87% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 52 276.59.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

## DWS Invest ESG Emerging Markets Top Dividend

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Equity Income

### Investment objective and performance in the reporting period

The objective of the investment policy is to generate above-average returns. For this, the sub-fund invests mainly in equities of issuers worldwide from which an above-average dividend yield is expected. The following criteria are of decisive importance when selecting the equities: average dividend yield for the sub-fund above the market average; sustainability and growth of the dividends; prospects for earnings growth; price/earnings ratio. In addition to these criteria, the proven stock-picking process of the portfolio management is applied. This comprises an analysis of the fundamental data of a company, such as asset quality, management expertise, profitability, balance sheet strength, cash flows, competitive position and different valuations. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the reporting period from the beginning of January 2023 through the end of December 2023, DWS Invest ESG Equity Income recorded an appreciation of 3.8% per share (LC share class; BVI method; in euro).

### Investment policy in the reporting period

A defensive strategy was pursued for the sub-fund. The investment focus was companies with above-average, growing and sustainable dividend payments that

\*"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

had solid balance sheets and good management teams, and whose stocks were traded at attractive ratings.

Further, the company had to have an above-average profile in terms of ecological and social aspects, as well as corporate governance. The portfolio management selected the companies that positively stood out in the sectoral and regional comparison based on the sustainability criteria examined. On the contrary, companies that did not meet the DWS sustainability standards were excluded from the investment universe. This affected specific sectors that are classified as controversial, including weapons manufacturers and tobacco companies, but also companies that notably violated UN standards and companies that were particularly strongly affected by risks from the effects of climate change.

Portfolio management also sought benefit from long-term, structural growth trends through investments in sectors such as renewable energy sources, energy efficiency or natural ingredients.

The defensive strategic positioning of the sub-fund relative to the broader equity market was expressed in a higher weighting of defensive sectors such as utilities, consumer staples, health care, and telecommunications (within the communication sector). More cyclical sectors such as consumer discretionary and information technology had a relatively lower weighting. Participation in the performance of cyclical sectors was achieved through a higher

weighting of defensive stocks in the basic materials, financials, and energy areas.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The equity markets of the industrial countries posted appreciable price gains in the 2023 calendar year. For example, the U.S. exchanges (as measured by the S&P 500) recorded strong price gains overall, boosted in particular by technology stocks, which benefited from growing interest in the topic of artificial intelligence (AI). The German equity market, as measured by the DAX index, also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be

less severe than feared. In addition, the easing of inflation in the euro area as the year progressed gave rise to market expectations of an end to the rise in interest rates as well as interest rate cuts in the following year. Price gains were noticeably smaller on the stock exchanges in the emerging markets, with China's equity markets even closing with perceptible losses.

During the year, the sub-fund recorded a single-digit gain. Due to its defensive strategy, it fell short of the performance of the wider equity market that recovered strongly in 2023 after the poor performance in 2022, led by a limited number of growth and technology stocks with no or low dividends (the "Magnificent Seven").

The sector allocation was negative due to the underweightings in cyclical sectors with low or no dividends, such as the information technology and cyclical consumer goods sectors, which recorded above-average results boosted by the "AI euphoria" and growth consumer stocks such as Tesla and Amazon. Defensive sectors with high dividends, such as utilities and basic materials, that were overweighted by the sub-fund, lagged behind the market development but were partially balanced out by a positive energy allocation.

The selection effects were negative overall due to the negative impact in the information technology (underweighting of megacap stocks with low or no dividend payouts whose prices rose strongly) and communications

(overweighting of the defensive telecommunications sub-sector that performed less strongly) sectors, as well as a more defensive positioning in the basic materials and health care sectors, partially balanced out by a positive selection in connection with financials (overweighting of European banks and insurance companies).

The best performance at individual stock level was recorded by investments such as Novo Nordisk, WW Grainger, Enel, Baker Hughes, Talanx, E.On and Broadcom. Stocks such as Orsted, BCE, Nutrien, Bristol Meyers, AT&T, Newmont Mining and Pfizer performed more weakly.

Major changes in positions during the reporting period were reductions in investments in, for example, Unilever, Eversource, Bridgestone, Toronto-Dominion Bank, Accenture, Motorola, Enbel, Bristol-Myers, Pembina, Baker Hughes, Ahold, Hasbro, HSBC, DNB, Nutrien, BCE, and SK Telecom.

Investments in, for example, DHL, Geberit, AT&T, Evonik, IFF, Smurfit Kappa, Amgen, WW Grainger, Tokyo Marine, Boliden, Neste, Orsted, Pfizer, Philips and Sampo were sold.

Positions in Fanuc, CME Group, ADP, Saint Gobain, Novo Nordisk, Essilor Luxottica, CapGemini, Medtronic, Norsk Hydro, Texas Instruments, Pepsi, Johnson Controls and Mondelez, among others, were increased.

New acquisitions for the sub-fund included HP, Broadcom, Allstate, Nintendo, United Health, Siemens,

Chubb, AstraZeneca, Nike, Infosys and Microsoft.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
MSCI World High Dividend Yield

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |        |
|------------------------------------|---|--------|
| Lowest market risk exposure .....  | % | 83.790 |
| Highest market risk exposure ..... | % | 98.412 |
| Average market risk exposure ..... | % | 94.004 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 0.00 as of the reporting date.

## DWS Invest ESG Equity Income

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).

\*\* Does not include positions with a negative balance, if such exist.

| Class GBP D RD 0.83% p.a.,     | Class USD FCH (P) 0.86% p.a., |
| Class USD IC 0.54% p.a.,       | Class USD LCH (P) 1.62% p.a.  |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

<sup>3</sup> Annualization has not been performed for share classes launched during the year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 805 647.42.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                         |
|--|------------|-------------------------|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year</b> |            |                         |
| 1. Distribution for the previous year  | EUR        | 2 917 378 726.89        |
| 2. Net outflows <sup>2</sup>   | EUR        | -57 462 015.94          |
| 3. Income adjustment   | EUR        | -167 468 879.17         |
| 4. Net investment income   | EUR        | 2 727 542.52            |
| 5. Realized gains/losses   | EUR        | 50 409 713.54           |

### Details on the distribution policy\*

#### Class CHF LCH (P)

The income for the fiscal year is reinvested.

#### Class CHF LDH (P)

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | CHF      | 2.86      |

#### Class CHF TFCH (P)

The income for the fiscal year is reinvested.

#### Class FC

The income for the fiscal year is reinvested.

#### Class FD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.51      |

#### Class IC

The income for the fiscal year is reinvested.

#### Class IC250

The income for the fiscal year is reinvested.

#### Class ID

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.06      |

#### Class ID100

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.32      |

#### Class LC

The income for the fiscal year is reinvested.

#### Class LCH (P)

The income for the fiscal year is reinvested.

#### Class LD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.35      |

#### Class NC

The income for the fiscal year is reinvested.

#### Class NCH (P)

The income for the fiscal year is reinvested.

#### Class ND

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 2.72      |

#### Class PFC

The income for the fiscal year is reinvested.

#### Class PFCH (P)

The income for the fiscal year is reinvested.

#### Class PFD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 2.69      |

#### Class TFC

The income for the fiscal year is reinvested.

#### Class TFCH (P)

The income for the fiscal year is reinvested.

#### Class TFD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.63      |

#### Class WFD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.51      |

#### Class XD

| Type               | As of         | Currency | Per share |
|--------------------|---------------|----------|-----------|
| Final distribution | March 8, 2024 | EUR      | 3.60      |

#### Class GBP D RD

| Type               | As of         | Currency | Per share |

#### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 0.00.

#### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

# Annual report

## DWS Invest ESG Euro Bonds (Short)

### Investment objective and performance in the reporting period

The sub-fund seeks to generate sustained capital appreciation relative to the benchmark (iBoxx € Overall 1-3Y). To this end, it invests in government bonds, covered bonds (e.g., German Pfandbriefe) and corporate bonds denominated in or hedged against the euro. In its investments, it aligns its portfolio to the short maturity segment; accordingly, the average term to maturity of the bonds and similar investments it holds shall not exceed three years. Factors considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) factors.\*

The sub-fund DWS Invest ESG Euro Bonds (Short) recorded an appreciation of 4.8% per share (LC share class; BVI method) in the last twelve months through the end of December 2023 and thus outperformed its benchmark, which returned +4.0% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates

As of: December 31, 2023

noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in par-

ticular posted significant returns as their risk premiums narrowed significantly.

In line with its investment policy, the sub-fund continued to invest in euro interest-bearing instruments with shorter maturities. The main investment focus was on government bonds, including bonds of near-government issuers. For yield reasons, the portfolio management also invested in financial services providers, industrial companies and, to a lesser extent, in bonds from emerging markets as well. These securities offered yield spread benefits when compared with German government bonds. Nearly all of the bonds held in the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date. To a lesser extent, currency-hedged positions were held in interest-bearing securities that

were not denominated in euro. The portfolio management saw greater potential in these bonds. This included bonds from Norway, Canada and the United States. The active management of the interest rate sensitivity of the sub-fund was of particular importance in the 2023 fiscal year. Whereas less interest rate sensitivity had a stabilizing effect on the sub-fund's overall performance in the first half of 2023, the increased yields were used in the summer of 2023 to acquire new positions and the sensitivity of the sub-fund thus rose. Freed up assets were increasingly reallocated to bonds of government or near-government issuers in order to follow a rather more defensive strategy. In addition, the portfolio management increased its investments in collateralized bonds. Overall, this helped the sub-fund to outperform its benchmark in the reporting period.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
14.14% of portfolio value

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |       |
|------------------------------|---|-------|
| Lowest market risk exposure  | % | 0.814 |
| Highest market risk exposure | % | 1.340 |
| Average market risk exposure | % | 1.063 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **absolute value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.4, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 305 572 124.30 as of the reporting date. Does not include any forward currency transactions entered into for currency hedging purposes at the level of the share classes.

### Market abbreviations

#### Futures exchanges

DB = Deutsche Bank AG Frankfurt

#### Contracting parties for forward currency transactions

Goldman Sachs Bank Europe SE, Morgan Stanley Europe SE and Société Générale.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

### Footnotes

- \* Floating interest rate.
- \*\* Some or all of these securities are lent.
- \*\*\* The prepaid placement fee is amortized over a period of three years (as specified in article 13 (f) of the general section of the fund's management regulations).
- \*\*\*\* Does not include positions with a negative balance, if such exist.

## DWS Invest ESG Euro Bonds (Short)

<sup>1</sup> This includes primarily income from the release of excess accruals in the amount of EUR 74 470.43.

<sup>2</sup> For further information, please refer to the notes to the financial statements.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                          |                         |
|--------------------------|-------------------------|
| Class FC 0.26% p.a.,     | Class IC100 0.17% p.a., |
| Class LC 0.48% p.a.,     | Class LD 0.48% p.a.,    |
| Class NC 0.79% p.a.,     | Class NDQ 0.79% p.a.,   |
| Class PFC 0.86% p.a.,    | Class PFDQ 1.23% p.a.,  |
| Class TFC 0.27% p.a.,    | Class TFD 0.26% p.a.,   |
| Class SEK LCH 0.52% p.a. |                         |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                           |                          |
|---------------------------|--------------------------|
| Class FC 0.023% p.a.,     | Class IC100 0.023% p.a., |
| Class LC 0.022% p.a.,     | Class LD 0.022% p.a.,    |
| Class NC 0.022% p.a.,     | Class NDQ 0.022% p.a.,   |
| Class PFC 0.022% p.a.,    | Class PFDQ 0.022% p.a.,  |
| Class TFC 0.020% p.a.,    | Class TFD 0.022% p.a.,   |
| Class SEK LCH 0.022% p.a. |                          |

of the average net asset value of the respective share class.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 28 019.64.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                       |  |
|--|------------|-----------------------|--|
| <b>I. Value of the fund's net assets at the beginning of the fiscal year . . . . .</b> |            |                       |  |
| 1. Distribution for the previous year / Interim distribution . . . . .                 | EUR        | -1 290 091.97         |  |
| 2. Net inflows <sup>3</sup> . . . . .  | EUR        | 78 922 337.68         |  |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 4.17% of all transactions. The total volume was EUR 41 692 046.23.

### Placement fee / dilution adjustment

In the reporting period, the fund paid a placement fee of 2.9% of the fund's net assets to the distributor. This fee was calculated on the subscription date. This placement fee serves in particular as compensation for distribution. The gross amount of the placement fee was paid in a single payment on the subscription date and simultaneously recognized in the fund's net assets as prepaid expenses. These are amortized on a daily basis over a period of three years from the date of subscription. The remaining position for prepaid expenses per share on each valuation date is calculated on a daily basis by multiplying the net assets of the fund by a factor. The relevant factor is determined through straight-line reduction of the placement fee by a certain percentage on a daily basis over three years from the subscription date. The prepaid expenses position fluctuates during the three years from the subscription date of the fund, since it depends on both the fund's net assets and the predetermined factor.

In addition, a dilution adjustment of up to 3% based on the gross redemption amount was charged for the benefit of the fund's net assets in the reporting period (to be paid by the shareholder).

Further details on the placement fee and the dilution adjustment can be found in the corresponding section of the fund's sales prospectus.

## DWS Invest ESG Euro Corporate Bonds

### Investment objective and performance in the reporting period

The bond sub-fund seeks to generate sustained capital appreciation and surpass the performance of the benchmark (iBoxx € Corporate). To this end, it invests in euro-denominated corporate bonds. Derivatives are used for hedging and for investment purposes. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

The sub-fund DWS Invest ESG Euro Corporate Bonds recorded an appreciation of 8.4% (LC share class; BVI method) in the last twelve months through the end of December 2023, and thus outperformed its benchmark, which returned +8.2% (both percentages in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of

Past performance is no guide to future results.

As of: December 31, 2023

a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

In line with its investment policy, the sub-fund remained focused on corporate bonds and interest-bearing instruments of financial services providers. In terms of regional allocation, preference was given to issues from Europe and the U.S. Most of the bonds held in

the portfolio had investment-grade status (ratings of BBB- or better from the leading rating agencies) as of the reporting date. In the course of 2023, the sub-fund had an increasingly offensive position, which helped it to outperform its benchmark.

The positioning of the sub-fund DWS Invest ESG Euro Corporate Bonds at the end of 2023 played a decisive role in its investment performance. In the fourth quarter of 2023, the overweighting in the banking sector, in which the sub-fund had a larger weighting in subordinated stocks as well, contributed substantially to the successful performance. The successful stock selection in the telecommunications and technology sectors as well as in the industrial service provider area also had a noticeably positive impact on the performance of the sub-fund. However, the underweighting in the real estate sector, which recovered markedly at the end of the year due to decreasing interest rates, had an adverse impact on the sub-fund's appreciation.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
Markit iBoxx Euro Corporate Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 79.627  |
| Highest market risk exposure | % | 129.577 |
| Average market risk exposure | % | 100.478 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 26 798 277.17 as of the reporting date.

| U.S. dollar .....   | USD | 1.107000 | = EUR | 1 |

## Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

The management fee / all-in fee rates in effect as of the reporting date for the investment fund units held in the securities portfolio are shown in parentheses. A plus sign means that a performance-based fee may also be charged. As the investment fund held units of other investment funds (target funds) in the reporting period, further costs, charges and fees may have been incurred at the level of these individual target funds.

## Footnotes

- \* Floating interest rate.
- \*\* Does not include positions with a negative balance, if such exist.

| <b>V. Net gain/loss for the fiscal year</b>                            | <b>EUR</b> | <b>-7 152 853.49</b>  |  |

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                      |                         |
|----------------------|-------------------------|
| Class FC 0.70% p.a., | Class IC100 0.23% p.a., |
| Class LC 1.04% p.a., | Class TFC 0.72% p.a.,   |
| Class XC 0.28% p.a.  |                         |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 29 531.42.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

2023

|  |            |                       |

|   | Class XC    | EUR            | 101.77 |

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 2.27% of all transactions. The total volume was EUR 17 281 712.07.

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG Euro High Yield

### Investment objective and performance in the reporting period

The bond sub-fund seeks to achieve sustained capital appreciation that surpasses the performance of the benchmark (ML Euro High Yield BB-B Constrained). To attain this objective, it invests worldwide in corporate bonds (also from the financial sector) that predominantly do not have an investment-grade rating at the time of acquisition. The non-investment-grade segment comprises bonds with a rating of BB+ and under, including bonds with a D rating and unrated bonds. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\*

The sub-fund DWS Invest ESG Euro High Yield recorded an appreciation of 9.6% per share (LC share class; BVI method) in the last twelve months through the end of December 2023, underperforming its benchmark (+12.2%; both percentages in euro).

### Investment policy in the reporting period

In accordance with the sub-fund concept, the portfolio management invested globally in predominantly high-yield corporate bonds, focusing on European issues. These high-yield bonds are non-investment-grade interest-bearing securities that are generally traded in the capital markets at considerably higher risk premiums relative to government bonds from the core markets, but offer noticeably higher yields in return. To take account of risk, the portfolio man-

\*"BVI method" performance, i.e., excluding the initial sales charge. Past performance is no guide to future results.

As of: December 31, 2023

agement concentrated its investments on high-yield bonds with ratings of BB and B from the leading rating agencies. In terms of its sector allocation, the portfolio was generally broadly diversified, although less cyclical stocks in the utilities, health care and services sectors were preferred.

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening eco-

nomie growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

On the international bond markets, the previous rise in yields initially continued in the reporting period, driven in particular by the high inflation rates and the central banks' rapid interest rate hikes aimed at curbing inflation. In the fourth quarter of 2023, however, bond yields fell noticeably again with the drop in inflation rates. Overall, the performance of the bond markets was largely positive in 2023. Corporate bonds in particular posted significant returns as their risk premiums narrowed significantly.

Against this backdrop, the sub-

fund recorded a noticeable appreciation in 2023, but it did not match its benchmark. This was particularly due to its more defensive positioning. Above all, the underweighting in fundamentally weaker banks from Southern Europe and the underweighting in cyclical sectors, such as the automotive sector, had a negative impact on the sub-fund's relative performance. The underweighting in the energy sector – primarily resulting from ESG considerations – also adversely affected the performance of DWS Invest ESG Euro High Yield. This was only partially balanced out by the positive contribution to performance made by the overweighting in the health care and services sectors. In addition, the individual stock selection in the basic industries and capital goods sectors had a positive effect on the relative performance of the sub-fund.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
ICE BofA BB-B Rated Euro High Yield Constrained Index

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                              |   |         |
|------------------------------|---|---------|
| Lowest market risk exposure  | % | 88.173  |
| Highest market risk exposure | % | 108.805 |
| Average market risk exposure | % | 99.311  |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.2, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 32 564 303.86 as of the reporting date.

## DWS Invest ESG Euro High Yield

---

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

### Footnotes

\* Floating interest rate.

\*\* Some or all of these securities are lent.

### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                        |
|-----------------------|------------------------|
| Class FC 0.80% p.a.,  | Class FD 0.74% p.a.,   |
| Class IC 0.52% p.a.,  | Class IC50 0.41% p.a., |
| Class LC 1.22% p.a.,  | Class LD 1.22% p.a.,   |
| Class TFC 0.76% p.a., | Class TFD 0.80% p.a.,  |
| Class XC 0.28% p.a.,  | Class XD 0.28% p.a.    |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

As well, the additional income from securities lending resulted in a performance-based fee of

|                        |                         |
|------------------------|-------------------------|
| Class FC 0.019% p.a.,  | Class FD 0.024% p.a.,   |
| Class IC 0.026% p.a.,  | Class IC50 0.024% p.a., |
| Class LC 0.021% p.a.,  | Class LD 0.022% p.a.,   |
| Class TFC 0.023% p.a., | Class TFD 0.021% p.a.,  |
| Class XC 0.024% p.a.,  | Class XD 0.022% p.a.    |

of the average net asset value of the respective share class.

### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 0.00.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

## Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 1.32% of all transactions. The total volume was EUR 10 144 912.84.

## DWS Invest ESG Euro High Yield

---

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value.

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with the swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing and has done so in the reporting period, as its (net) inflows and outflows exceeded the relevant threshold previously defined. No swing pricing adjustment was applied that would have had an impact on the (sub-)fund's net asset value per share on the last day of the reporting period.

# Annual report

## DWS Invest ESG European Small/Mid Cap

### Investment objective and performance in the reporting period

The objective of the investment policy of the sub-fund DWS Invest ESG European Small/Mid Cap is to achieve above-average capital appreciation. To achieve this, the sub-fund invests primarily in mid cap and small cap equities. When selecting suitable investments, environmental and social aspects and the principles of good corporate governance (ESG criteria) are taken into consideration. These aspects are an integral component of the investment strategy.\*

In the fiscal year from the beginning of January through the end of December 2023, the portfolio recorded an appreciation of 12.4% per share (LD share class; BVI method; in euro).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in

As of: December 31, 2023

most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

European equities that were included in the investment focus of the sub-fund posted appreciable price gains in the 2023 calendar year. The German equity market also recorded substantial gains, buoyed by factors such as the easing of the gas crisis since the first quarter of 2023 and an economic slowdown that turned out to be less severe than feared. At the beginning of 2023, the rapid increase in interest rates had negative effects on regional banks in the United States and put pressure on the valuations of European banks. The dissolution of global supply chains, turmoil and the rising opportunity costs of warehousing led to an inventory reduction in many industries.

Across several market segments, the consequence for many companies was a lower volume of incoming orders and weaker quarterly reports. The receding pressure on inflation rates and the resulting discussion around the end of the cycle of interest rate hikes eased the capital markets in the course of the year.

The equities of jewelry manufacturer Pandora made a positive contribution to performance, for example. The company was immune to the difficult consumer environment and was even able to raise its short- and medium-term targets in the course of the year. The equities of BPER, an Italian bank, that benefited from the higher interest rate environment also made a positive contribution. The equities of the British discounter B&M European Value also impressed. The company was able to present good operating

performance that exceeded expectations. Further, the uncertainty after the change in management in summer 2022 evaporated, since the new Chairman of the Management Board surpassed investor expectations and demonstrated compelling action and communication.

OX2, Zalando and Worldline made negative contributions. OX2 is the largest wind farm developer in Europe. Low electricity prices in Scandinavia dampened investor sentiment with regard to the stock. Further, in an environment of high interest rates, it was more difficult to sell-off wind farms. Zalando is the leading online fashion retailer in Europe. Its equities suffered from low demand in conjunction with surplus inventory levels in the entire retailing sector. Skepticism with respect to the return to two-figure sales growth also impacted negatively on the valuation ratios of Zalando. Worldline is a payment service provider. This was basically a promising market segment with high organic growth and attractive margins. However, the price suffered from decreasing growth momentum and more competition. The high level of debt in an environment of rising interest rates also subdued interest in the equities.

High inflation – albeit with receding pressure – rising interest rates and fears of recession influenced performance at sector level. Defensive sectors like health care and communication, and the deliberate underweighting of the real estate sector, made positive contributions to relative performance. On the contrary, industrials, IT and

the utilities sector made negative contributions.

**Composition of the reference portfolio** (according to CSSF circular 11/512)  
50% STOXX Europe Mid 200, 50% STOXX Europe Small 200 (Net Return)

**Market risk exposure (value-at-risk)** (according to CSSF circular 11/512)

|                                    |   |         |
|------------------------------------|---|---------|
| Lowest market risk exposure .....  | % | 105.719 |
| Highest market risk exposure ..... | % | 119.315 |
| Average market risk exposure ..... | % | 113.049 |

The values-at-risk were calculated for the period from January 1, 2023, through December 31, 2023, using historical simulation with a 99% confidence level, a 10-day holding period and an effective historical observation period of one year. The risk in a reference portfolio that does not contain derivatives is used as the measurement benchmark. Market risk is the risk to the fund's assets arising from an unfavorable change in market prices. The Company determines the potential market risk by means of the **relative value-at-risk approach** as defined in CSSF circular 11/512.

In the reporting period, the average leverage effect from the use of derivatives was 0.0, whereby the total of the nominal amounts of the derivatives in relation to the fund's assets was used for the calculation (sum-of-notional approach).

The gross exposure generated via derivatives pursuant to point 40 a) of the "Guidelines on ETFs and other UCITS issues" of the European Securities and Markets Authority (ESMA) totaled EUR 13 637 875.35 as of the reporting date.

### Notes on valuation

Under the responsibility of the Board of Directors of the SICAV, the Management Company determines the net asset values per share and performs the valuation of the assets of the fund. The basic provision of price data and price validation are performed in accordance with the method introduced by the Board of Directors of the SICAV on the basis of the legal and regulatory requirements or the principles for valuation methods defined in the SICAV's prospectus.

If no trading prices are available, prices are determined with the aid of valuation models (derived market values) which are agreed between State Street Bank International GmbH, Luxembourg Branch, as external price service provider and the Management Company and which are based as far as possible on market parameters. This procedure is subject to an ongoing monitoring process. The plausibility of price information from third parties is checked through other pricing sources, model calculations or other suitable procedure.

Assets reported in this report are not valued at derived market values.

#### BVI total expense ratio (TER)

The total expense ratio for the share classes was:

|                       |                          |
|-----------------------|--------------------------|
| Class FC 0.90% p.a.,  | Class IC 0.74% p.a.,     |
| Class ID 0.71% p.a.,  | Class LC 1.64% p.a.,     |
| Class LD 1.64% p.a.,  | Class NC 2.14% p.a.,     |
| Class TFC 0.89% p.a., | Class TFD 0.96% p.a.,    |
| Class XC 0.46% p.a.,  | Class USD LCH 1.65% p.a. |

The TER expresses total expenses and fees (excluding transaction costs) as a percentage of a fund's average net assets in relation to the respective share class for a given fiscal year.

#### Transaction costs

The transaction costs paid in the reporting period amounted to EUR 625 354.31.

The transaction costs include all costs that were reported or settled separately for the account of the fund in the reporting period and are directly connected to the purchase or sale of assets. Any financial transaction taxes which may have been paid are included in the calculation.

### Statement of changes in net assets

### Transactions processed for the account of the fund's assets via closely related companies (based on major holdings of the Deutsche Bank Group)

The share of transactions conducted in the reporting period for the account of the fund's assets via brokers that are closely related companies and persons (share of 5% and above) amounted to 0.00% of all transactions. The total volume was EUR 15 038.65.

## DWS Invest ESG European Small/Mid Cap

---

### Swing pricing

Swing pricing is a mechanism that is intended to protect shareholders from the negative effects of trading costs arising from subscription and redemption activities. Extensive subscriptions and redemptions within a (sub-)fund may lead to a dilution of the assets of this (sub-)fund, as the net asset value sometimes does not reflect all trading and other costs that are incurred when the portfolio manager must buy or sell securities in order to manage large (net) inflows or outflows in the (sub-)fund. In addition to these costs, substantial order volumes may lead to market prices that are considerably below or above the market prices that apply under normal circumstances.

To enhance the investor protection of existing shareholders, a swing pricing mechanism can be applied to compensate for trading costs and other expenses if the aforementioned cumulative (net) inflows or outflows should have a material impact on the (sub-)fund on a valuation date and exceed a predetermined threshold (partial swing pricing). This mechanism can be applied across all (sub-)funds. If swing pricing is introduced for a particular (sub-)fund, this will be disclosed in the special section of the sales prospectus.

The Management Company of the fund will predefine thresholds for the application of the swing pricing mechanism, based, among other things, on current market conditions, available market liquidity and estimated dilution costs. In accordance with these thresholds, the adjustment itself will be initiated automatically. If the (net) inflows or outflows exceed the swing threshold, the net asset value is revised upward if the (sub-)fund sees large net inflows and is revised downward in the event of large net outflows. This adjustment is applied uniformly to all subscriptions and redemptions for the trading day in question. If a performance-based fee applies for the (sub-)fund, the calculation is based on the original net asset value..

The Management Company has established a swing pricing committee that determines the swing factors for each individual (sub-)fund. These swing factors indicate the extent of the net asset value adjustment. The swing pricing committee takes into account the following factors in particular:

- bid-ask spread (fixed-price element),
- impacts on the market (impacts of the transactions on the price),
- additional costs that are incurred as a result of trading activities for the investments.

The appropriateness of the applied swing factors, the operational decisions made in connection with swing pricing (including the swing threshold), the extent of the adjustment, and the affected (sub-)funds are reviewed at regular intervals.

The amount of the swing pricing adjustment can therefore vary from one (sub-)fund to another and will not generally exceed 2% of the original net asset value per share. The net asset value adjustment is available upon request from the Management Company. In a market environment with extreme illiquidity, the Management Company can, however, increase the swing price adjustment to more than 2% of the original net asset value. Such an increase will be announced on the Management Company's website: [www.dws.com](http://www.dws.com).

As the mechanism should only be applied if significant (net) inflows or outflows are expected and it does not apply for normal trading volumes, it is assumed that the net asset value will only be adjusted occasionally.

This (sub-)fund can apply swing pricing but has not done so in the reporting period, as its (net) inflows and outflows did not exceed the relevant threshold previously defined.

# Annual report

## DWS Invest ESG Floating Rate Notes

### Investment objective and performance in the reporting period

This sub-fund seeks to generate a return in euro. To achieve this objective, it invests in predominantly floating rate government and corporate bonds denominated in euro or hedged against the euro. Aspects considered when selecting investments include financial strength and also a focus on environmental, social and corporate governance (ESG) criteria.\* In addition, derivatives may be used as an instrument for portfolio management.

In the past twelve months through the end of December 2023, the sub-fund DWS Invest ESG Floating Rate Notes recorded an appreciation of 4.2% per share (LC share class; in euro; BVI method).

### Investment policy in the reporting period

The international capital markets experienced some turbulence in 2023. Geopolitical crises like the Russia-Ukraine war that has been ongoing since February 24, 2022, the intensifying strategic competition between the USA and China and the conflict in Israel/Gaza, but also high inflation and slower economic growth initially led to a marked deterioration in market sentiment. To counteract inflation and its dynamics, many central banks raised interest rates noticeably, bringing many years of expansionary monetary policy to an end. Against that backdrop, and in view of globally weakening economic growth, there were mounting fears among market players of a recession taking hold. However, inflation slowed perceptibly in

"BVI method" performance, i.e., excluding the initial sales charge.

Past performance is no guide to future results.

As of: December 31, 2023

most countries over the remainder of the fiscal year through the end of December 2023, prompting the majority of central banks to halt their cycle of interest rate hikes.

The investment focus of the sub-fund DWS Invest ESG Floating Rate Notes was on floating rate bonds whose coupons are usually adjusted to the current market interest rate every three months. For yield reasons, the portfolio management invested predominantly in bonds of financial service providers and in corporate bonds with short to medium maturities. Most of the interest-bearing instruments held in the portfolio had investment-grade status (ratings of BBB- or better from the leading

rating agencies) as of the end of December 2023. In terms of its regional allocation, the sub-fund was globally positioned, although investments in Europe were the main focus of investment; positions in North America and Asia rounded out the portfolio. Foreign currency positions in the portfolio were hedged against the euro.

Thanks to its portfolio orientation to shorter maturity dates, the interest income was positive due to higher interest rates. The narrowing of the credit spreads of the corporate bonds and financials in the portfolio also made a positive contribution to the sub-fund's investment performance. The reasons for this development were the diminishing inflation

momentum and indications of the end of the rises in interest rates, both seen as the year progressed through the end of December 2023.

### **Information on the environmental and/or social characteristics**

This product reported in accordance with Article 8 (1) of Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector ("SFDR").

Presentation and content requirements for periodic reports for financial products as referred to in Article 8 (1) of Regulation (EU) 2019/2088 (SFDR) and in Article 6 of Regulation (EU) 2020/852 (Taxonomy Regulation) are available at the back of the report.
